ON THE CD...

Once again, SEGA SATURN MAGAZINE provides the very best in cover-mounted demo CDs. Whilst other magazines for other systems provide monthly CDs regardless of game quality, we prefer to produce less discs but with far superior games. Just as we have done this month.

SEGA FLASH VOLUME #3, to give the disc its full name, is a truly exceptional piece of demonstration engineering, guaranteeing satisfaction to all who load it up. But what do we have for you? Read on...

PLAYABLE LEVELS!

VIRTUAL ONE

It's a robot battling game! It's got amazing 3D graphics! It has deep and extremely involving gameplay! It scores 99% in this very issue!
Virtual One is one of the games where you really don't know what's going on to begin with, which makes this demo so great, because you can play it and play it until you've surpassed the game's incredible battling mechanics! Or you could read the otherwise starting page 44! In a word, incredible!
WHAT YOU GET Play against the first robot on hard difficulty level with any of the robots. Watch the amazing extra level!

DAYTONA COE

Daytona COE isn't Daytona Remix. It's a different take on the classic arcade game. This time put together by the ES Team - the people responsible for the best-selling Saturn translation of Sega Rally. In this demo you get to see what all the fuss is about with a full, single track to get your teeth into. Remember in the full game you get seven more cars and four more tracks - this is only a fraction of what's on offer!
WHAT YOU GET Play a full four-lap race on the legendary Designer Canyon track in the normal car. Prepare yourself for the power!

TOMB RAIDER

Lara Croft's debut adventure only just happens to be the very greatest piece of work ever to issue forth from the labs of Core Design. And you get to play a portion of this epic game! Bear witness to the full 3D movement of this most stunning of games. Check out the sheer detail in every single part of the landscape - it's awe. Also learn to control the immensely talented Lara and battle wolves and/or Mike. Another Saturn winner!
WHAT YOU GET An entire level from the finished game, with all features included. It's a total feast!

SEGA WORLDWIDE SOCCER '97

Although this has been on the shelves for quite a while now, Sega are still keen for as many people as possible to sample this piece of footballing excellence. Hence its return to our demo disc! The most amazing football simulation ever! Sega Worldwide Soccer outshines every similar effort on every other system and is truly one of the most essential titles in the Sega Saturn library of games!
WHAT YOU GET Playable half of just one game, with limited teams on offer. The full game's commentary is missing too.

PLUS FULL-MOTION VIDEO OF:

BUG TOO! FIGHTING VIPERS!! VIRTUA COP 2!!!
NIGHTS!!!! DARK SAVIOR!!!!!! MR BONES!!!!!!

WARNING: After the demo CD work is pressed it becomes apparent that there is a bug with this software. Apparently if left alone for around three hours, the Saturn will crash. And, need the machine and everything should be fine - there's no danger to your Saturn or its internal memory.

We suggest that you do not check out until you have received a return slip which will be supplied by your phone. Apologies.

SEGA SATURN MAGAZINE USE**TO TEST ALL SOFTWARE****COVER STORY****58 SONIC 3D BLAST!**

Sega's flagship character comes to Saturn in this original isometric 3D adventure the spiky hedgehog is once again pitted against the evil power of two Robotnik! We've got the one and only exclusive, so check it out!

**COMING SOON****14 FIGHTERS MEGAMIX**

Imagine if characters from Virtua Fighter 2 did battle with the Fighting Vipers (and a bunch of other AM2 creations). The result? Fighters Megamix - the surprise sensation. SEGA SATURN MAGAZINE has played it first, of course.

**18 BUG TOO!**

Sega of America return with their own flagship character, Bug! The original game was pretty good, but the sequel threatens to blow it out of the water, with far superior graphics, more variety, tons more stages and plenty more bosses (like three of them) characters to control. For full reason as to why it really is so much better, go to page 35 now!

**COIN-OPERATED****90 1996 JAMMA SHOW REPORT**

Want to know all about the hottest arcade machines you'll be playing at the near future? Go to our mega JAMMA report now for details on all the exciting games at this prestigious Japanese event! It's an article you can't miss if you're into coin-ops, like we are.

SHOWCASES**38 VIRTUAL ON**

The AMS robo-battler Virtual On has finally arrived on Saturn and, of course, coming from those prestigious developers, it's flippin' incredible! You can play it on our cover disc to get a sampler and then move on to our feature to see some of the game's other, incredible features. Get moving!

**48 COMMAND AND CONQUER**

Quite how we only just got this for review when it's out in the shops as we write is a bit of a mystery. Rest assured though, there's no dodgy 'release it before it's reviewed' thinking going on here - Command and Conquer is ace. As you would expect from Westwood Studios, one of the top two American developers (the other's id software).

52 CHRISTMAS NIGHTS

After our fantabulous two page feature last month we can reveal the full power of the Soviet team's brilliant Christmas package. This special version of NIGHTS is packed full of levelness and hardcore gaming action. All is revealed here, including the Soviet model!

NEWS

Welcome to the latest edition of SEGA SATURN MAGAZINE. It's been what you might call a trying month this issue with Dave and I being the only full-time staff on the magazine (and him disappearing for a week to do the awesome CVG History of Videogames), but we've still managed to produce some great stuff! As well as getting the first look at Fighters Megami, we've got stunning news about VTJ, Last Bronx and of course X-Men versus Street Fighter. I do heartily recommend Virtual On and Command and Conquer - two games that you should go out and purchase right now. I've also finally "got into" Tomb Raider as well - a Saturn game you MUST own. Oddly enough, two of the three games I've just mentioned can be found on our spectacular demo disc - which everyone gets to sample this time. SEGA SATURN MAGAZINE: the best Saturn mag out there. Bar none.

Shoryuhei
Richard Leadbetter, Editor.

CAPCOM'S LATEST EXCL

Capcom teamed up with Sega to give the most exciting press launch of the year. Not only was Fighters Megami revealed with VTJ and Last Bronx announced for conversion to Saturn, but Capcom also dropped into the ring to create that X-Men versus Street Fighter is a SATURN EXCLUSIVE!

At the now legendary Power-Up press conference on November 6, Junichi Masuda (team manager of the Capcom marketing group) announced their intention to bring their latest 3D fighting game to Saturn only.

If you missed the Con-Operated report a couple of issues ago in SEGA SATURN MAGAZINE, we've seen it. It's just a load of arcade sheets (except a near identical look for the Saturn game) and basically fill you in a bit about what the game's about.

Basically speaking, X-Men versus Street Fighter is like a cross between Marvel's Super Heroes and Street Fighter Alpha 2, combining elements of both.

The emphasis is far more on action though, as opposed to the technical nature of SF2. The speed of the game is far faster than Alpha with moves being much easier to pull off! Special moves are also far more spectacular, with some enormous sprites on screen which clearly the PlayStation can't handle (check out the no-show of X-Men [apparently cancelled for good] and the lacklustre DairiGals conversion).

WHAT'S IT ALL ABOUT?

Marvel arch-villain Apocalypse lives by one edge: that only the fittest must survive. Having been around for over a thousand years, he's convinced that the me of the mutants will continue unchecked with the weak humans eventually overwhelmed by the evolution of the mutant gene. However, the antics of the Street Fighters has caught his attention. Can these mere humans really match up to the superhuman powers of the genetic mutant X-Factor? He kidnaps a bunch of Street Fighters and X-Men and decides to carry out some painful research on them.

Putting aside all of their differences, mutants and Street Fighters come together to take down Apocalypse! (Knowing that a one-on-one battle with Apocalypse is near-suicidal, the characters team up into pairs and go into battle - for some reason, against each other!)

THE TEAM STRUCTURE

The best thing about X-Men versus Street Fighter is undoubtedly the fact that you actually have control over TWO characters. On the character select screen, two fighters can be chosen from eight X-Characters or nine Street Fighters into the game and the three-round match system has been scrapped. Basically the match is now over when both of your characters have been defeated. Switch between them by using the heavy punch and kick buttons simultaneously IT'S as simple as that really!

SUPER-TEAM ATTACK MOVES!

Performing Super Moves (or X-Attacks) is pretty much like X-Men: Children of the Atom. Mostly it comes down to a fireball motion with all three punch buttons.

Ryu's Super new look is available! All the Street Fighters' moves look better here.

Claw (I remember Zangief) in true style. Note the Mega-style Super Combo Finish explosion.

X-Men Versus Street Fighter features sprites so large, even the Saturn's going to be pushed to display them. But it will, because **SHIT!** Now Capcom disappointed as yet? Answer: in a word, no.

USIVE TO SATURN!

However, in **X-Men Versus Street Fighter**, it's possible to have both characters use their Super at once! The results is some of the most wanton carnage you've ever witnessed in a 2D fighting game!

When characters with outrageous looking attacks get together the screen is packed with crazy movie sprites. For example, a Cyclops/Ryu combination produces two absolutely huge laser style attacks that take up the entire screen.

Another addition are the Team Counters. Similar to the Alpha Counters in Street Fighter Alpha, these are different in that whilst your main character blocks, your second comes on and performs the counter. Superlative stuff!

NEW CHARACTERS TOO!

As you can see from the screenshots, **X-Men Versus Street Fighter** features some new characters to get to grips with. Finally, Capcom have included three of the X-Men's most popular characters as the soder Gambit, master athlete and capable of empowering objects with kinetic energy is ailing with the love of his life Rogue. She's super-strong, can fly, and can absorb the powers and memories of others. Basically this means that she can steal fireball attacks (and Ken's flaming Dragon Punch). Mutafix X William Satercock has also been included. He plays similarly to the Hulk in Marvel Super Heroes, but he's a lot, lot better. And remember, in the Street Fighter department there's a scabbing new although Caveny finally returns (and she's in the throal of booo)

BUT WHAT ABOUT THE SATURN GAME?

Obviously this game is going to be difficult to convert. Why? Well, Capcom have had problems getting all the animation for two characters in memory at once. With **X-Men Versus Street Fighter**, this is doubted since there are twice as many fighters in memory at once.

We can only think that this is the game that Capcom finally use a memory card for, similar to what SNK have done with King of Fighters '95 and Fatal Fury Real Blood. Capcom have said in the past that they will use the system, but it's yet to be confirmed if this is the game that will do it. Hopefully we'll have some firm answers soon.

THE TOYS 'R US DEBACLE

One of all, many apologies about the bundles of joy feature last month. Despite us getting information directly from the head offices of the companies featured, an error crept in that has obliged SEGA SATURN MAGAZINE's offices with phone calls. Just for the record, the Toys 'R Us deal for the Saturn (approximately £200 for a machine plus three games) was incorrect. Apparently the correct price is around £230. Obviously we feel a bit stupid because we recommended Toys 'R Us and it turns out that their pack is pretty underwhelming, in which case, we recommend checking out Game or Saturn. Look for a three-games pack including the Saturn, Sega Rally and Virtua Fighter 2 (plus another) for around £230. Once again though, many apologies to everyone who asked for the deal information and looked away to Toys 'R Us. Information along these lines will be double-checked in future.

SNK STRIKE BACK

SNK are just about ready to unleash their latest Saturn 3D Gert combination game in Japan. And it is... King of Fighters '96! We're gone in about 400 before but basically this is the most technically sound fighting game series about - even allowing Street Fighter Alpha 2 if you're slugged off in the UK arena mostly by people who can't play it properly.

KING OF FIGHTERS RELEASE?

In a similar theme it would appear that King of Fighters '96 is finally going to get a UK release - finally. Hopefully the game should be pretty cheap too, even though the 3D Gert system has been released for the UK game. Expect KOF to finally be released in the first quarter of 1997.

MOORE CORE

Game Design are currently on a high after the incredible success of Tomb Raider which perhaps we under-rated at 30% - it really is absolutely AMAZING! The next project due from the Berlin-based company is a 3D polygonal Streets of Rage style game, in Gert. Once approached Sega to actually use Streets of Rage characters, but even the game is also appearing on PlayStation that publisher don't hit through. It's also been revealed that a sequel to Tomb Raider is also currently in the planning stages.

MARVEL-OUS

Capcom still seem intent in refining Marvel Super Heroes for the Saturn. And more power to them for doing so, because the arcade machine was BRILLIANT, a first quarter 1992 release, perhaps?

Wolverine and Cyclops look up to produce their Super Moves (above) - It's bloody spectacular, understand? Ken's Flaming Dragon Punch looks too (below).

Handwritten text in red ink, including the words 'FEEL NO PAIN', 'FEEL NO SUFFERING', and 'FEEL NO DEATH'.

Handwritten text in red ink, including the words 'LOVE YOUR FATHER' and 'THE FATHER'.

Handwritten text in red ink, including the words 'HE HATCHI WILL AVENGE!' and 'HE HATCHI'.

Handwritten text in red ink, including the words 'THE KING OF THE PISTON' and 'PISTON'.

SONY logo and PlayStation logo with the text 'IN 2007, WE REIMAGINED THE FUTURE OF PLAYSTATION'.

VIRTUA FIGHTER 3 FINALLY CONFIRMED!

At the major Japanese press conference which revealed Fighters Megakix to the world for the first time, Yu Suzuki also announced that Virtua Fighter 3 would CERTAINLY be appearing on Sega Saturn.

Mr. Suzuki, AMU's distinguished leader told the Japanese press that AMU Research had been studying the Model 3 hardware and V3 program for the last few months to determine whether it's even possible to bring the game to the Saturn in any way shape or form.

Speaking at the Power Up press conference, he said "The question was, can we actually do it? But after the results attained from studying the matter for three months we have concluded that technically the possibility is there. Department AMU and I have the responsibility of making this possible, so please expect the best."

Mr. Suzuki's announcements were vague enough to leave out a huge wall of speculation as to how the Saturn would be able to cope with the power of Virtua Fighter 3. Special effects aside, the game has walls like Fighting Vipers plus different levels of terrain which has huge implications on both the look and the gameplay.

The good news is still on some kind of 3D accelerator chip being introduced in a cartridge and bearing in mind that awesome spec four megabyte RAM 3D boards are available for PC at around \$400 in the states, it's clear that some kind of cart would be pretty easy to mass-produce (and thus boost the Saturn's performance way ahead of PlayStation and even N64).

But this is all speculation on the part of super excited journalists. Expect concrete details over the next few months.

WHAT IS THE MYSTERY AM2 SATURN GAME?

Fighters Megakix is all we know about, but Yu Suzuki has also announced the existence of another AMU project exclusive to Sega Saturn. Just what it is, exactly? Mr. Suzuki isn't letting on, saying only that "it will be as surprising as Fighters Megakix." Some new usage for the Virtua Cop engine is the most likely candidate at this time, but AMU are keeping their cards close to their chest. The only other piece of information revealed at this time is the Japanese release date of "this season", with some Japanese magazines believing that the game will be out THIS YEAR!

Hopefully the mystery will have been cleared up by the time the next issue of SEGA SATURN MAGAZINE hits the stands.

INTRODUCING... DRACULA DETECTIVE

A new game currently doing really well in Japan is Dracula Detective from the ASCII Corporation. The game is a 3D cinematic adventure game which uses the latest computer graphics technology to provide some awesome, involving visuals. ASCII drafted in Mr. Hideki Senoeda (famed for his work on major Japanese TV animal on series) to produce the plot and script, which is as much comedy as it is suspense.

The game basically involves you taking on the mantle of a Space Time

Detective who goes back to Germany 1939 to stop a scientist gone mad. He has taken refuge aboard a giant airship - the *Loedel* - and you, accompanied by some *Loedel* (the scientist's daughter) and your partner *Komon* board the airship. Suddenly *Loedel* disappears and the airship changes direction. What's going on?

Dracula Detective looks very interesting, but whether it will ever be translated into English is a mystery not even this detective is likely to solve in the short term!

IT'S TERRA FANTASTICA!

Sega Europe have announced an RPG which will go on sale sometime in 1997. Terra Fantastica is kind of like Shining Force in that it is a combat-styled adventure game. Deep on plot and combat, Terra Fantastica uses the grid system of combat to promote tactics and strategy. We haven't really played this one enough yet to get really fired up about it, but with games like this and Dark Savior on the way, it's clear that the Saturn is the machine of choice when it comes to adventure games.

SHAMELESS PROMOTION RIGHT HERE!

It's not often that SEGA SATURN MAGAZINE lowers itself to promoting our sister EMAP magazines (that's what house ads are for), but this time it's justified!

We highly recommend that you check out the latest edition of CVG (it has a lovely Christmas NIGHTS cover) which comes bundled with a brilliant, shiny 100 page book on the history of videogames! Written by Paul Glavinay who just happens to be a major SGM contributor and designed by our very own Dave Kitchell, it really is brilliant. Maybe better than the mag (just joking!).

We wouldn't recommend this if it was anything less than the Masters' work, but not only is it brilliant, well-written and informative, it's also FREE (with the mag).

Go forth and purchase in confidence!

THE COMPLETE HISTORY OF
COMPUTER AND
VIDEO GAMES

THE TECMO LIVE GAME SHOW!

In Japan, it's common for arcade manufacturers to stage their own events to promote their games. Capcom's Summer Festival is a brilliant annual event that shows cars both home and arcade games. Well now Tecmo are getting in to the act as they ready their new coin-op releases.

Dead or Alive you might have heard about. It's a new arcade 3D fighting game noteworthy as that it uses Model 2 Sega technology and is planned for conversion onto Saturn in the future. Other Tecmo titles showcased included Gallop Racer (a 3D horse racing game) and Tecmo's Super Bowl.

The event itself was a great success, replete with competitions, game challenges, a chat show and a live concert. But best of all, gamers finally got the chance to get their mitts on Dead or Alive - a game which the Japanese press have been raving about for months!

AM3 UNLEASH BRONX CHEER

The 8th of November was a big day for Saturn fighting fans. Sega's AM3 and AM1 programming teams called a press conference in Japan to announce that they were working on Saturn conversions of two of the greatest arcade beat 'em ups of all time, *Virtual Fighter 3* and *Last Bronx*, as well as an all-new Saturn fighting game, *Fighters Megami*, which combined characters from *Fighting Vipers*, *Virtual Fighters* and various "guest stars" from other *Virtual* games. You'll find more details on *Fighters Megami* in the *Cooling Socks* feature on page 14.

A few days after the monumental conference, Mr Abe, AM3's development director who led the team responsible for the coin-op version of *Last Bronx*, spoke to the Japanese press about the Saturn conversion. He's confident of producing a near-perfect translation of the original.

Converting such a powerful arcade game to the Saturn presents quite a challenge even to the original arcade programmers, though. "Considering we're using 3D technology, it's a first for us to create a game of this magnitude on such a technology," says Mr Abe.

THE ORIGINAL TEAM ARE DOING IT

But what's new, WOAH-HO-HO-HO! Was it wise to ask the arcade programmers to produce the Saturn conversion if they were so unfamiliar with the hardware? Mr Abe thinks they would be the only people in the world qualified to produce the spot-on conversion that Saturn players would demand. "When we were making the arcade version," he explains, "we wanted to push the Model 1 technology to its limits. An example was to animate even the smallest of things like the clothes on the characters and make the movement generally smoother. These are the difficult touches we wanted to achieve in the game, so you can imagine that if we didn't have the original team working on the home version we would be in trouble. Also, we didn't want the atmosphere to change in any way if the original artist didn't do the graphics for the conversion, the graphics for the conversion the graphics would differ in some way and that's not what we want for the Saturn version. The characters in *Last Bronx* are very popular so if the feeling of the game changed in some way there would be hell to pay!"

CHARACTER TRANSLATIONS

How well will these characters translate to the Saturn? At the time of the interview Mr Abe's team were working on exactly that problem. "Obviously we can't port over the character data directly to the Saturn," Abe says, "so we're in the process of cutting down the number of polygons here and there so the characters can have more freedom to move slowly."

That's not going to be the only problem Abe's team will face, though. What about the famous mid-air "Toaster" combos that the game is famous for? Surely the collision-detection required for such moves would

be a bigger to program? Mr Abe usefully concurs, "Trying to get the collision-detection perfect looks to be the hardest part of the development. Not being able to do the same flooring combos as the arcade version would have ruined the conversion."

GAMEPLAY DIFFICULTIES

The attack cancel's, that completely restrain an opponent's moves, are also proving difficult to convert because there are so many possibilities that have to be catered for, but they too should be in the conversion. Likewise, the weapons, complete with alter images. "The reason we used the alter image," Mr Abe explains, "was because we found the weapons moved too fast and couldn't really be seen. For that reason we think it's very important that we put those in the conversion too."

It looks like *Last Bronx* will follow in the footsteps of other Sega arcade conversions, with all new game modes exclusive to the Saturn conversion.

DON'T DO ANYTHING STRANGE!

At the moment, though, the team haven't decided what they might be. On the subject of new characters for the Saturn conversion, Mr Abe isn't too keen. "So many games have an original character, but with *Last Bronx* this is a problematic point. The game was designed to be quite realistic, with realistic style and people - *Last Bronx* characters wear clothes based on current Tokyo street fashions. So if we create an original character there's the possibility that it would destroy the style of the game. If players think this character doesn't fit the whole exercise would be meaningless. There must be a lot of players out there who think to themselves, 'Please don't do anything strange with the game!'"

AM3 released character movement demos of VS1 - see AM3 are doing it with *Last Bronx*.

Some more action shots showing Tetsu's movements from *Last Bronx*.

Here you are, the official first Sega Saturn shots of *Last Bronx*. As you can read in the special report, Sega are opening an avenue with this game, drafting in the original code-up team to perform the Saturn translation. If the entire game is as authentic as these character movement demos are, you're in for quite a treat. It should be the perfect complement to *Fighters Megami* before VS1 finally appears on the Saturn.

CAPCOM

FIGHTERS MEGAMIX

It's the construction that 3D fighting games have been only too able to dream about... well now. Bala from Fighting Vipers takes on the sheer power of Virtua Fighter's Miro Yell. Now you might think that the VF character would totally overwhelm old Bala with the sheer power and diversity of his attacks, but the Viper boy does good, mostly done to his trainer and peer: counter-techniques.

In the words we proposed, the lack of power counters for the VF players really give the Vipers a tangible advantage. The Virtua Fighter do haven't however been losing the security of their 3D technique arsenal. Both the VF and VF characters are able to use the various techniques with any of the X, Y or Z buttons as Miro is doing (see picture).

The heavy-hitters of the 3D fighting universe come together in one mega game! Jeffry (left) is still looking for prize money, Sennos (right) is just as powerful as ever with Wal (right) has some awesome graphics from WD!

W3 move action as Sage takes down Saku.

Another new technique from the Kagemeister!

Sarah and Judy's Dragoi background has walls and!

It's the top secret AM2 project no-one knew about until November 6. And it's coming out in Japan before Christmas! It's Fighting Vipers vs Virtua Fighter 2... and more! It's going to destroy the insolent "Tekken" series once and for all. It's Fighters MegaMix and it's a revelation!

In all honesty, nobody outside of Sega's upper echelons knew anything about this until the tail-end of the 19 show in Japan early in November. And even when Yu Suzuki called a "Power Up" press conference to announce the game, nobody could quite believe it. But it's true. AM2 are developing an all-new, original 3D fighting game exclusively for Saturn - the first project they've undertaken which ISN'T an arcade conversion, even though it's based on their greatest coin-op ever. All of them.

Fighters MegaMix is best described as a meeting of AM2's finest characters. All of the Fighting Vipers are present, as are the entirety of the Virtua Fighter cast. And there's more: Original 3D fighting characters have been created by AM2 for inclusion in this MegaMix, but for the time being, they remain cloaked in mystery (see the appropriate box-out for our

sponsorship).

Basically, Fighters MegaMix is the culmination of two years of AM2's 3D fighting game brilliance. The amazing engine that powered Virtua Fighter 2 and Fighting Vipers has finally come to the end of its natural lifespan. At the old-time "Power-Up" meeting, Mr. Suzuki announced that AM2 are starting work on converting Virtua Fighter 3 to the Saturn. That means all-new routines and technology, probably based on an all-new 3DS operating system. Fighters MegaMix is the final game from AM2 to use the system.

THE PRE-ANNOUNCEMENT RUMOURS

At the beginning of October, word reached SEGA SATURN MAGAZINE that the AM2 team behind Fighting Vipers had been whisked away and placed on a new top secret project so secret as

It's the **surprise announcement of the season** as **Vipers and Fighters meet** for the **ultimate 3D fighting experience!**

Shin O) cannot be understated in Fighting MegaMix since he has most of the amazing new W3 techniques at his disposal, which gives his fighting style a far higher level of fluidity. Kamenashi remains pretty much as ruthless as he was in Fighting Vipers, but he's not a secret character any more, accessible right from the beginning on the Tekken-style character select screen.

WHO'S IN IT?

The list of announced characters for Virtua Fighter may have our hands full.

VIRTUA FIGHTERS

It's the most emotional and brutal fighting game the Sega Saturn has ever had. Master of 3D graphics and realistic physics.

Looks like we're in for a real treat. The game is the best of the best.

The PAL version of VF had been completed. We thought nothing of it. Virtua Fighter 3, it had to be.

From there, the plot thickened. It transpired that the entire Sega Saturn division of AMI was working on the same project, with all others having been suspended until the mystery game was complete. Speculation still centred on Virtua Fighter 3 until the rumour emerged (just before the announcement) that the project would be available BEFORE CHRISTMAS (in Japan). The world trembled, as this effectively ruled out VF3. In all the world, only one little Yam Gaijin on CWG managed to guess what it was, just prior to Yu Suzuki's announcement on November 6.

WHAT ABOUT THE GAME?

If Fighters MegaMix has all the characters from AMI's top fighting games, does it render those games obsolete? Maybe, but probably not. AMI are working to make the game separate and distinct from VF3 and Fighting Vipers.

From the screenshots, it's clear to see that the high-resolution of VF3 has been sacrificed to include all of the light-sounding and extra 3D scenery of Fighting Vipers.

AMI are promising that the game will include backgrounds with or without Fighting Vipers' walls. It's up to you if you want them in there. The style of play emphasises the speed of Vipers over the technical accuracy of VF3. But just imagine what the power punch Akira could do in an arena with walls, how long it would look like fully high speed! Well imagine no longer. Look at the pictures and marvel.

Look, this game is going to be amazing, the culmination of every fighting fan's dream!

THE BACKGROUNDS

As explained previously, Fighters MegaMix includes the walls and fences of Fighting Vipers, but we can expect to see a great many more original backgrounds. The VF characters are being re-presented with enhanced versions of the backdrops in Virtua

The VF characters have armor-indicators, but this is from an early version. It's been removed in the final version.

Overhead shot in Komadori's code!

Fighters. AMI have especially emphasised that they are concentrating on making many new moves which players wouldn't have seen before.

NEW TECHNIQUES FOR ALL

We have discovered that all of the characters in Fighters MegaMix are to receive new attacking techniques in addition to the moves they sported on VF3 and Fighting Vipers. AMI have confirmed that the VF characters are set to have Power Counter and Armour Buster moves incorporated into their fighting style, although they were no armour (thank god). But get this sense, but not all of their techniques from Virtua Fighter 3 are set to be included! For less in the way of detail has been spelt out with regards to the Vipers - just that they will have new moves.

What we can reveal is that the ESCAPE manoeuvre from Virtua Fighter 3 (available in Vipers' Hyper Mode) is available, allowing characters to dodge sword attacks. Additionally, all characters will be able to perform the mid-air recovery technique from Fighting Vipers by pressing all three buttons whilst airborne.

INTRIGUING MYSTERIES

The one-player game has yet to be described to our satisfaction, especially as the Sol game release was so vague, talking about taking a selection of characters through different courses up against other fighters. What actually transpires is very similar to Ultimate Mortal Kombat 3, with different "courses" through the game, each based on a certain theme - for example an all girl roster of opponents. Apparently the more courses you complete, the more open up and reveals lies the path to the secret characters.

SO WHEN IT'S OUT?

It's going to be a pre-Christmas import frenzy with the Japanese version out in the shops on December 21. There's going to be a bit more of a wait for the official UK version though, which appears in the shops during the first quarter of 1997 (no firm release date has been set). However, since this is an AMI product with a further bit of lead time, we have been assured of a PAL conversion which could well be superior even to VF3! Sheerings!

Looks like VF3's background now has a Fighting Vipers' style floor! Best eh?

ENHANCED MODES

VF and Fighting Vipers have included the most comprehensive list of game variations we've seen in home fighting games, but this has been increased still further in Fighting MegamiX. In addition to VF's excellent Team Battle Mode, we can reveal that AMIs have included a Capcom-style Survival Mode. Here, you choose one character and go up against the entire fighting roster with just one energy bar of life. How far will you get?

Additionally, we're pleased to report that the Training Mode of Fighting Vipers has been incorporated. With over 30 characters (by our reckoning) in the game, mastering all of their moves is going to take ages, so this will be exceptionally helpful.

Jim prepares to jump from the back of Sarah (top left). Rina punches Sara (top right). Mira's power finally begins to overwhelm Viper's (center). Rina (bottom left), a full view of Rina's own character stage, complete with fence (bottom right). In the center picture we see Sarah using one of her VF-like techniques of lighting effects (center picture is Viper equivalent character move).

FIGHTERS MEGAMIX: I'VE PLAYED IT!

It's no real secret that SEGA SATURN MAGAZINE gets to play all of the big Saturn games first, but even so I felt a huge amount of excitement at having a few hours' play on what is now easily my most wanted videogame.

FIRST IMPRESSIONS

The first impression when I played it. It's very Fighting Vipers. The system used in MegamiX is virtually identical and in the version I played the speed of the game suited the Vipers more than the VF characters. A few more minutes in and it all kind of sunk in - the Tekken style stages with no walls (which are rare), the phenomenal lighting effects (ouch, much better than Vipers even though the same system is used) and the wackiest routes through the one-player game. **SHOOTING / MUST HAVE FIGHT GAME - NOT EXCLUSIVE.**

ALL WILL BE REVEALED NEXT MONTH!

Let's face facts - this is going to be one of the biggest Saturn releases EVER. That being the case, SEGA SATURN MAGAZINE has secured the last word in coverage (for now). You can see full-on details of this most exciting of videogames in the next issue (which will have a brilliant MegaMix cover) where all of your questions about this game will be answered. It is a videogame magazine you simply cannot afford to miss. Understand!

THE MYSTERY CHARACTERS

The official Sega of Japan/AMIs press release gave pretty comprehensive details on what Fighting MegamiX would be all about, including a full-on character list detailing participants from both Fighting Vipers and Virtua Fighter 2.

However, there is a passing reference to characters from Virtua Cop also appearing in the game! We can only imagine from this throwaway remark that in addition to the characters mentioned elsewhere on these pages that Raga Smart or probably Janet will make it into the game (expect an **INCREDIBLE** surprise should you find this specific character).

Think about it, they'd fit into the game perfectly. Check out the CG render of these three in last month's SEGA SATURN MAGAZINE. They're already kitted out with Fighting Vipers-style armor. But who knows how they'd move? We'll find out for sure next month.

**HUNDREDS OF NEW MOVES!**

The characters are more than just rehashes of what has come before. The VF players control almost identically to VFs (minus a few moves), but because the Vipers engine is used it plays differently to any of the Virtua Fighter games out there, including the phenomenal Medal 3 coin-op. The AMIs press release seemed to mention the new techniques in passing as bonus extras - this ISN'T the case. There's acres of mileage to get out of the new techniques as the VFers feel faster than ever!

OTHER STUFF I CAN'T TELL YOU...

I'm also asking to tell you about all the other new stuff - the new backgrounds, the secret characters (some of these fighters will probably make cut-scenes), I guarantee it - even a description of the options screen will have 3D fighting fans begging me for further details. Unfortunately, I'd did tell you any of this I would be killed (probably slowly and painfully), so for the moment I must be silent.

... BUT I WILL NEXT MONTH

To sum up, all these opportunities for a game which can't be more than 60% complete at the time I use it? Unbelievable, but true. In fact the only complaints any one is going to have is that the high end mode of VF isn't here - as I said, the Vipers engine is used. But I really can't imagine any one wanting when they eventually play the game. Personally, I can't wait.

RICH LEAFSTER

BUG TOO

Remember when the Saturn first came out and great games didn't come out that often? Remember how **Bug!** came out and everyone said it was great so you bought it? Remember how promising, albeit flawed it was? Well here comes **Bug Too!** Which will be better, promise.

It had to happen. After a most successful outing last year, Bug! has returned to the Saturn in a brand new, highly exciting adventure. First of all, let me just say that I (Dink) really didn't like the original Bug! much at all. Although I could see that the game was very well designed and quite original in its own way, I just hated the almost difficulty level but most of all I despised the American sitcom humor. It wasn't funny.

That it was with some apprehension that I approached Bug Too! I was promised by Sega that the game had been completely reworked, with a fairer difficulty level and much better sense of humor. Now I have to admit that having played what is admittedly an extremely early version of the game I am quite looking forward to the finished article. Allow me to continue.

IT'S A MONSTER

Bug Too! is big, right. If you thought the first game was rather on the large side, you're going to be extremely surprised by the sheer vastness of this sequel. In actual fact, one level select screen had well over 50 different levels. Some of these were bonus rounds, but suffice to say that all of the normal stages are just as substantial as they were in the original game (that's large). In the interests of good gaming, each area of the game has a select stage, allowing you to access any of the levels you want.

As in the first game, the levels are based on speech of well

known genre movies, so expect the likes of Lawrence of Arabia and Red Dawn to be mercifully ripped off and given the expected Bug! treatment.

A BONUS SUB-GAME FREENY!

The original Bug! had its fair share of bonus game action, including a nice little race against iconic Hedgehog! For Bug Too! the bonus action has most definitely been dotted into the positions vacated "overdrive". And here's why.

For a start there are a bewildering amount of little games to find, including a enhanced version of the classic arcade machine Q*bert, which looks great using the Bug! engine. There's also a kind of giant fruit machine as well as a racing game to discover.

Once again, there's little detail describing in detail what goes on in these levels because it's clear that the ideas are very embryonic at this stage, but the sheer wealth of them should make for plenty of variety between the normal Bug! stages.

ALL-NEW SPECIAL EFFECTS!

Although it made use of the Saturn's polygons and texture-mapping capabilities, the original Bug! was a bit slack in making use of the Sega machine's powerful special effects. As you might imagine, this has changed totally in Bug Too! with some marvellous set-pieces and little touches that make the game far more appealing. For example, on the Red Dawn stages, an eerie mist

NEW HEROES FOR HIRE

One of the big enhancements for Bug Too! is the inclusion of extra heroes for the player to control. Now the variety of the game no longer is a criticism really, as we can't say for sure if this is the final number of characters. However, these three are equally selectable

BUG!

This guy returns to the mode of a mystery being as he is almost identical to his original appearance in the first game. Bug! runs, jumps and spins at the appropriate times, but is powered up with the appropriate invincible sound and changes to his first Master style, accompanied by his own Heroic Submarine-themed music.

Bug Too! continues the **genre movie rip-off theme** that was apparent in the first game **and it's a lot better this time, honest!**

Hundreds of action from the Red Dawn stage in the big four pictures, along with Bug! blowing off in the carnival of age (center). One of the biggest problems we had with the first game was how that massive appeared on-screen with little warning, making it very frustrating unless you had a photographic memory. Luckily, the Bug! Team have seen fit to make actions simpler and that more enjoyable in the sequel.

As well as a whole new bunch of heroes to get to grips with (see the side bar to the right), Bug Too! features far superior levels and a lot more going on in them than in the four-way spinning overdrive. (ahem)

SUPERFLY!

A new character created for the Bug Too! games. At the moment he needs very carefully to the appropriate Bug! but just a little better.

COMING SOON

Here's a good example of some of the enhanced graphics in Bug Tool II. Looks lovely, it's not just!

Superly good looking.

There are extra hazards in front of you in this one, adventure, like this huge bed of spikes.

Bug is back in an all-new adventure with a bunch of extra levels and better graphics - plus far superior gameplay and sound!

decade a bit later on in the stage, as you should see in some of the screenshots on these pages. Another nice effort is the inclusion of some wacky platform designs. In the first Bug! you could walk "up" platforms and suchlike - this has been retained in the sequel, but there are some new onscreen style platforms that spiral off into the distance. And yes, the whole screen spins around as you walk down them. Excellent stuff.

WITH NEW ADDED GAMEPLAY!

The speed of the sequel isn't really that much different from the original Bug! However, the engine running the game has been optimised, allowing the programmers a fair bit of leeway in including extra detail in the stages. As you can see from the screenshots, the slightly sparser look of the original has given way to far more sumptuous visuals in the sequel.

But the best news of all has to be that the Bug! team have heeded some of the criticisms levelled at the first game in that it was just too frustrating. A lot of the time the 3D perspective didn't reveal enemy creatures until they'd had their evil way with Bug! making it a most frustrating game. Things appear to be far finer in Bug Tool which can only be good news.

WHEN'S IT OUT?

Bug Tool is currently scheduled for release sometime in February, so it's a bit surprising that we've had to cover such an unlabelled version of the game. Suffice to say that the team behind the game are making excellent progress and are well on schedule for getting Bug Tool out in time. Expect a preview in the next edition of SEGA SATURN MAGAZINE and a review in the magazine following that one, so long as everything goes to plan.

MAGGOTY BOG

This is indeed terrible it causes them the average here and leads to walk around in small jumps, adding less more difficult to control than either Hopper or Bug! His jumping ability is also being called into question. Doubtless there'll be more of the game when the release date has the only way for the job.

BUT... BUT NOW!

All the moment you can visit any of the three houses of the kingdom of the game, but having the version of Bug Tool we have to be early, who knows how the huge character action will actually work out in the finished title. Maybe only certain levels will work with certain characters. Perhaps more abilities for each of the larvae will be programmed to be differentiable from each. In fact, it would be accurate to state that we're unscientifically cautious about the regard of the game at the time of writing. Don't get the wrong end around in a future edition of this the mag.

The space space here.

Some carnival level action.

Oh! looks lovely.

More carnival stuff.

More new graphical look!

There are a wealth of levels not-gone to discover in Bug Tool. Like this 'G'bert style one (above).

A neat array of Bug Tool screenshots have taken place in the new Space Stage. Notice the spiral platforms (centre) which spin the entire screen around as you walk down them.

**YOU WILL ATTACK, DESTROY, ESCORT, RESCUE,
DEFEND AND SURVIVE AT ANY COST.**

Blast or be blasted!

TEMPEST 2000

We might laugh at the tragedy of Jaguar owners, but they've always exclusively owned one of the greatest games ever made - Tempest 2000. Except now it's coming to Saturn. Poor old Jaguar owners, bahahahaha!

UP	INTERPLAY
PRICE	TBA
STYLE	SHOOT 'EM UP
RELEASE	JANUARY 1997

MAELSTROM MUSIC!

Jaguar's Tempest 2000 has some of the best tunes of any video game - a mix of reggae Prodigy-style rave tracks. However, they were streamed off a cartridge. Thanks to its CD format the Saturn has gone one better, with remixed versions of the music. More outstanding sound effects and samples all feature!

TAMING THE TEMPEST!

If you've never played Tempest before, it may all look like a load of ambiguous shapes and colours to you. In preparation for this awesome blaster, here's the Sega Saturn Magazine crash course to understanding Tempest.

You control the ship which sits at the front end of a 30-tonnel. Moving left or right, you slip around the edge of the tunnel.

The further you get into the game, the bigger the rings of enemies that set upon you.

Whas veteran programmer Jeff Minter decided to update the legendary Atari coin-op Tempest, he knew what he was doing. Tempest still is one of the most innovative coin-ops ever made. At a time when vectors were the most advanced visuals you could get, Atari used them to dazzlingly stylish effect - creating a genuinely alien looking game instead of trying to poorly represent recognisable ships or landscapes. The result is one of the most fiendishly hardcore shoot 'em ups devised!

With Tempest 2000, Minter kept all the super stylish vectors that made the original so unique. Rather than splicing up the graphics with poor textures, he demonstrated the advance in technology by upping the vector count! More laser lines, exploding particles and all-new fantastical splashes of waeping colour turned it into a game as brilliantly unique as the original was in its day.

What's more, we have to concede that it was the Jaguar hardware that made the game possible.

The Jaguar's **most playable game** blasts its way onto Saturn... and it's an **audio-visual apocalypse** of epic proportions!

Starting at the far end of the tunnel, alien war their way up the tunnel in an attempt to get to you.

The coolest coloring effects from the Jaguar original are virtually identical on Saturn.

For retro fans like our Brett, you get original Tempest too!

Believe it or not, the Jaguar featured some impressive custom intervals that made it a cinch to do the waeping oily effects and multi-particle graphics of Tempest 2000. We can concede this fact because High Voltage, the developers of the Saturn version, have managed to replicate the effect to nigh-on perfect effect through sheer programming power!

By combining the Saturn's 3D polygon handling prowess with its phenomenal sprite-shifting ability, they've reproduced all the dazzling effects of the Jaguar original. And if you've ever experienced Tempest 2000 before, you'll know what that means.

All you've got to do is shoot them before they get to you. Saurer said they done, so the badies get together.

We can best describe it as being akin to flying through a styrofoam laser-light show during a centenary fireworks display, while Ming attacks Earth with both air and lightbulbs are thrown at you. Something like that, anyway!

Kind-blowing as these graphics are, they'd be little more than a fancy screensaver if the gameplay wasn't up to scratch. Well, up-to-scratch is an understatement of Tempest 2000's gameplay. It's one of the most perfectly honed blasters created. There are 99 levels of gradually increasing difficulty. And they make for a super-addictive, reflex-pushing highscore challenge. All the levels have already been programmed into the Saturn version, and even though they've yet to be fully fine-tuned, they're already more than enough to match the challenge of the original.

Next to the likes of Virtua Fighter 2 and Quake, there are many people in this office that consider Tempest 2000 to be one of the greatest games ever made. If this conversion makes the grade - which looks highly likely at this stage - it means another killer title for the Saturn. Reason we'll find out next month when we review the wacker!

The snail's great too, with Predator-style soundtracks.

Becomes snail superlucid!

This game is AC!

Early abuse can't even harm you when they reach the top - provided you stop still while shooting.

Later though you get enemies that distract you, lethally so around the rim, or even shoot back!

Score! Some lovely snail congratulations.

POWER UP!

One big update to the original coin-op format was the addition of power-ups to Tempest 2000. Certain enemies release tubes which mix up the tunnel. Collecting these provides rapid shot weapons, jump facility (essential on later levels for avoiding lethal enemies), AI (void exists in shooting) as, after all these have been collected - a wary. These are the most important part of the game. Collect three of these and you get sent to a hypotetically stunning bonus stage. We can't show you it though, because it isn't in the Saturn version yet!

That's when you need to see your Super Zapper (don't shoot it) - the only get one per stage though!

AREA 51

Okay, you bought *Virtua Cop* last year and it was seriously brilliant. But since then the old *Virtua Gun* has been left out of the action, with next to no support from the Saturn developing community. Apart from *Chaos Control* (snigger).

BY	SEGA
PRICE	£39.95
STYLE	PUZZLE
RELEASE	DECEMBER

One of the big problems with these FMV titles is the fact that the super-legendary episodes lack the seamless great image shifts on-screen. Gun is pointed (above).

SHOOTING YOUR LOAD

There's been a severe dearth of software using the excellent *Virtua Gun*, with only the seminal *Virtua Cop* making use of the peripheral. Until now. *Area 51* is just one of an increasing number of titles to appear recently offering full compatibility. Other titles to look out for include *Cop 3*, *Mighty Hits* and *Die Hard Trilogy*. Another title NOT to look out for is *Chaos Control*, which is reviewed in *Out Now* on page 56.

The sprites fit the FMV pretty well, despite the colour schemes.

Tom Daley visits Mo'nik at (MMP)'s new Bookends HQ.

Things have certainly changed over the course of the last couple of months. First of all we had the brilliant *Virtua Cop 2*, then we got *Mighty Hits* (reviewed this issue) and now we have *Area 51* - a conversion of the little known coin-op, which has been brought up by Williams and unleashed by the power of GT interactive.

So, what's the deal? Basically, it's time to jump onto the last train to FMV Central, because that's exactly what *Area 51* is all about. The on-screen action is depicted with the joys of full-motion video using cunningly overlaid sprites for you to shoot at. A similar effect was used on the latter FMV titles on the Mega-CD and it was abysmal... thankfully the Saturn is more than capable of producing sprites which blend in seamlessly with the backgrounds (apart from the day-glo clothes, that is) so what we have here is a virtually arcade-perfect

conversion of the coin-op, although the FMV window has been squeezed a bit in its transition from the arcades. The basic plot sees you infiltrating the infamous Area 51 (if you haven't seen *Independence Day*, this is where the US government is supposedly studying alien UFO technology and making their own flying saucers), and basically shooting everything... apart from your fo-en-mates.

Think *Virtua Cop* in 3D, or maybe a more advanced form of *Konami's* lethal *Exorcism* and that's what you have here. Hardly state of the art, yet strangely interesting and more to the point, quite enjoyable. The original arcade game did very well in the States and certainly made a pretty sizable following, so it's bound to do pretty well with the Saturn fraternity over there. Stay with SEGA SATURN MAGAZINE for more UK details.

"Despite the smaller FMV window (and the fence stuck to your face), Area 51 is remarkably close to the coin-op original."

One thing that is a bit odd about *Area 51* is the fact that the enemies can be firing at you for seconds, but they don't hit (unless the *Virtua Cop* sharp-shooting needs). Best way to see them down the old-school page 56AP.

IT'LL TAKE YOUR FACE-OFF!

BATMAN FOREVER

Love it or loathe it, *Batman Forever* was the most popular bat-flick of all-time. Probably because of the inclusion of be-wonderbra'd Nicole Kidman (insert your own bat-pole gag here). Unfortunately the delectable Mrs Cruise Asa? made it into this game. Bo!

DP	ACCLAIM
PRICE	TBA
STYLE	FIGHTING
RELEASE	TBA

Can you actually see what's going on here? Well, unfortunately not. It's an all-out fighting frenzy.

Ever played *Streets of Rage* or *Final Fight*? Well, this is virtually identical, just with a heap more power-up and various bits of spritz-squirting trickery. In you also the master cheat, percentage symbols appear to show you how much energy your opponents have left.

ENTER... THE RIDDLER

Rather than concoct any riddles as such, the Riddler tends to throw mystery boxes around the playing area. Some of these have good effects on the Dark Knight, others bad. Worst of all must be the super shrinker which reduces Bats to half-size. His fighting abilities remain unimpaired though, making for a rather bizarre spectacle. That self-same power-up can be reversed and used on your opponents, making them easy to take out.

THE BAT SHARK REPELLENT

Every so often, on his trips through the dark streets of Gotham, Batman happens to chance across Bat equipment mysteriously materialising around the place for no good reason (maybe Alfred's in command of some kind of Bat Transporter). Unfortunately, there's no Bat Shark Repellent from the *Fun Film* (but that there's actually any sharks), but you do get an assortment of Bat goodies including the essential Batstangs (and Super Batstangs if you're lucky). So that's cool.

A claim is a pretty successful set of chaps you know. Not only do they release videogames for just about every videogame system under the sun, they've also started out on producing their own arcade games. Their first, a conversion of *Batman Forever*, didn't really have much of a presence in the UK. Unfortunately, Acclaim have converted it to both Saturn and PlayStation - and this is where you get your first look at it.

Take a look at the screenshots. What do they say to you? Well, it wouldn't surprise us if the phrases "beat 'em up" and "side scrolling" mysteriously appeared in your mind. Probably because that's exactly what this game is. Yes indeed, *Batman Forever* follows in the footsteps of such hallowed titles as *Streets of Rage*, *Final Fight* and *Double Dragon* by giving you

tons of foes to beat up as you continue your steady progression towards a confrontation with the final boss(es). In this case, the Riddler and Harvey Two-face. Cool, just like the film.

The game's certainly a duck to get it into, probably because there's just three buttons to get to grips with: attack, jump and super attack, various combinations of which produce various responses. It really is very similar in terms of gameplay to what has come before, although the graphics are all new, using Acclaim's patented motion capture routines and character digitisation methods.

The techniques of *Batman* and *Robin's* disposal generally come down to a combination

series of martial arts moves activated with a combination of button presses and joystick movements. Line up a series of foes in front of you and the comb-

As well as sending your opponents left or right (as is the case in these games), you can also grab hold of them and punch them "overhead" or "rear" from the screen.

Don't fight! Dodge!

Some spectacular Bat-destruction!

Bely minimum of spritz!

Batman powers up and gets just a bit perturbed.

A super-powered Batman looks on.

Heh, can't really see what the deal is here.

A couple of bosses here.

Batman gets a sneak to the chops.

So, another scene of Bats powering up.

There's the Batmobile. Just why is Batman's chest symbol so offing big?

THE DYNAMIC DUO!

It's dynamic duo teats up action all the way with *Batman Forever: Arkham Asylum*! At the beginning of the game, you see a pretty damn excellent character selection screen, allowing you to choose between Batman and... Robin. However, to save arguments on who's who, you can both be the same character should you so wish. To be honest, there's not much to choose between them. Soel! You'd think Batman would be far busier than circus orphan boy Robin. Fans of the "Boy Wonder" might be disappointed to learn that there's no martial arts laundry hanging ongame in this release. And no canoodling with Chase Meridian for Batman.

JUST LIKE THE FILM

As you might imagine, the game's characters and scenarios are taken pretty much directly from the film. However, as you might imagine, some liberties have been taken with the backgrounds in order to make them fit into the side-scrolling fighting game scenario. Scenes like the streets of Gotham City, the Riddler's lair and the circus are well represented (although you fight as bats in the latter, not Bruce Wayne as in the film). The gallery of villains facing you includes just about everyone from the film (such as Two-Face's girlfriends Sugar and Spice) as well as some new characters made especially for the game.

Acclaim's little-known coin-op debut gets the Sega Saturn treatment! But is an arcade perfect conversion good enough?

meter blasts into overdrive. Grabbing a foe by the scruff of the neck allows for some head-bashing and throwing action - just like *Final Fight* (and *Streets of Rage*). Anding your attacking is the inclusion of a vast array of collectibles, ranging from extra hit-equipment to power-ups which allow the Dark Knight to pull off *Street Fighter Alpha* style Custom Combinations.

As you might imagine, behind the all-new visuals lurks a pretty well-known game-style. *Batman Forever* succeeds in bringing the arcade game home - in fact, it's probably one of the closest translations ever seen on the Sega system. The question is, does the original game itself have the necessary depth and excitement to make it a worthwhile purchase in its new form as a home game? Such assessors could well present themselves in a forthcoming issue of SEGA SATURN MAGAZINE when we review the finished product. Until then, look at the screenshots and imagine what it's like.

I think we've got the idea here.

Well, yes, definitely (yeah).

Batman is a subverting beat 'em up, eh? Ever played *Batman Returns* on Super NES?

DOOM

It's the game that launched an entire genre. And now, after much aiming, aiming and basic procrastination, it's finally about ready to appear on the Saturn. The game? Why - it's Doom of course!

BY	GT INTERACTIVE
PRICE	TBA
STYLE	DOOM-STYLE
RELEASE	DECEMBER

ANALOGUE ACTIVITIES

One thing Edge Software have done to take this beyond PlayStation Doom is to include support for the analogue controller (which you bought with NIGHTS). Doom was always far more intuitive when used with a mouse on PC and you get a similar feeling with the NIGHTS pad on the Saturn. The analogue controller allows you to walk or run depending on how much pressure you put on the pad. Strafing left and right is achieved with the shoulder buttons. This is a lot better than using the ordinary pad.

IT'S DOOM AND DOOM 2!

Bring a "Special Edition" of Doom, you can expect a smattering of levels from every version of Doom but the final edition. You begin your destructive quest with levels from the original Doom, before moving on to the more complex environs of Doom 2. The final section of game includes sections of Ultimate Doom - an extension to the original version. There are also some console-specific levels included too.

The levels really get more convoluted (and the violence gets a lot worse) in the Doom 2 levels. In the PC original series of Doom titles, Doom 2 was by far the best game - was better than the latter release, Final Doom.

W In 1995, id software unleashed what was to become a global phenomenon. Doom was the name of the game that sold more 486 PCs than anything else.

Combining awesome first person perspective graphics with ultra-violent gameplay and the far old tradition of blood, Doom was a gaming revelation that all others tried to copy. Only Duke Nukem 3D (arguably) surpassed it, and by that time, id had Quake just about ready for release.

The Saturn has been hideously overlooked when it came to converting id's classic. Only now has a version become available after months of development... getting on for THREE YEARS after the PC original was first released! It's about flip ping time really, isn't it?

The good news is that this Saturn game is a conversion of every PC Doom variant released to date (our the last word, Final Doom!). That means you get a smattering of levels from all versions along with the Doom 2 engine, which includes the Super Shotgun weapon, which was only in the sequel.

Otherwise, it's business as usual in the Doom universe. You're the lone marine caught on Mars when the demons of Hell decide to invade Earth. Curiously, you're the only guy available for duty (unless you manage to get hold of a link up cable and pay it in Cooperative Mode with your mate). Using a variety of weapons, it's your job to basically gun down everything in sight. Sliding keys to open doors and solving cunning puzzles (although there's not really

A whole **three years** after the original PC release, there's finally a **Doom conversion for the Saturn.**

This bit's from the first Doom and was one of the original levels first released as shareware.

READ THE REVIEW BEFORE BUYING

At the time of writing, Saturn *Doom* includes all of the gameplay of the PlayStation version but looks more like the PC original - although it's lacking a lot of the finer detail of the very first version (a fault of every console version ever, resulting in its own laggy version). The big problem with the game is the speed - it's extremely jerky at the moment and this ruins a lot of *Doom*'s timeless playability. It could go either way: if the game speeds up to immensely, it could be excellent. However, we urge you to read the review before you part with your money because fluidity in a game like *Doom* is all important, believe us.

A blood-red lava envelops you when you get hit hard.

A boss of legs suffer some shotgun blasts.

much of the latter) *Doom* is getting on a bit now and the whole scenario is becoming something of a cliché.

The question is how good is the conversion? Well, every aspect of *Doom* that was in the PlayStation version (bar the special lighting effects) is included and everything looks pretty cool. The only problem is that Rage Software appear unable to get the game moving up to the sort of smoothness and fluidity you'd expect any one expecting a game as smooth or as good looking as *Doom* is in for a bitter disappointment. All eyes are on Rage Software now to deliver the goods. If the final version of *Doom* doesn't cut the mustard, we suspect that gamers across the country will be rightly outraged and demand that Rage never touch a grade A product like this again. Still, we like to think we're optimistic; Rage will be able to get the game up to speed - stick with SEGA SATURN MAGAZINE for the full review in the next couple of months.

The berserker goes - you give your punches a great deal more strength.

Out of these unseemly masses.

The double-barrel shotgun destroys all.

EERIE...

Saturn *Doom* features all of the audio tweaks made by Williams when they converted the game onto the PlayStation. Each level features a weird, eerie, ambient soundtrack which lends a great atmosphere to the proceedings. The sound effects have been remixed from the PC original too, with a great new shotgun noise being the most noticeable change. But to be honest, it's the music that puts this ahead (marginally) of the PC version (which is still the best version, coincidentally).

ARTWORK: I. James Beatty

DIE HARD TRILOGY

By the time you read this PlayStation Die Hard Trilogy will finally be on the shelves, with the much vaunted Saturn version literally weeks behind. January 24th. That's when it'll be out. Honest.

BY	FOX INTERACTIVE
PRICE	£24.95
STYLE	VARIOUS
RELEASE	JANUARY

Die Hard - John McClane, with a full load of toxic release pills in Nakatomi Plaza.

Die Harder - Virtua Cop-style gun action in the departure lounge of LAX.

Die Hard: With a Vengeance - Join the telephone kiosk of New York Daily.

YIPPEE KAIYAY!

That John McClane is a bit of a foul-mouthed person. After all, how many people has he despatched to Hades with the inimitable cry of "Yippee Kaiyay Mother*****", well, this being videogame land, things are a bit more sanitised. So there's not mother*****, essentially. Such epithets as "Now I have a machine gun" are also present (although he actually wrote that, rather than said it). Still, the voice employed is pretty similar to Mr Bruce Willis, if a tad softened.

Make these terrorists pay for their crimes - not with trial by jury, but with a grenade in the toilet! They're asking for it.

A fiery office building that's destined for destruction.

An airplane that's destined for destruction.

As it is, this is the first we've seen of the Saturn version of the Hard Trilogy. Originally we thought that the game might not even make it. But it has. And here it is. About 17m really. Still under the game.

As you should probably know by now, Die Hard Trilogy is actually three games in one - a Thrilligy, if you will. The first Die Hard is a kind of Load'n'Fall to Black style shooter based in the fabulous skyscraper that is the Nakatomi Plaza. As you might imagine, there's plenty of Beretta, grenade and Uzi action - just like the film in fact. This is actually a pretty cool game in its own right.

Die Hard 2: Die Harder takes John McClane into Virtua Cop territory. Now a lot of the PlayStation mag has been going on about how this is supposedly "superior" and more "intelligent" than Virtua Cop. Well, wake up and smell the coffee guys, it just isn't even in the same league. At all. However, it remains pretty good fun as McClane traverses LAX airport gunning terrorists down like stinking pigs.

But hey - this is a trilogy - which means that

there's obviously a third game to look to. This is in fact Die Hard with a Vengeance. Or at least a bit of it (the film). Specifically the bit where McClane commandeers a taxi and drives around New York in search of a bomb. Only in the game there is more than just one task for McClane to perform. Again, this is pretty cool - the action is fast and pretty hectic and the gameplay is most enjoyable. If you fancy the idea of running people down but don't like the real life implications (prison, loss of license, guilty conscience), this is the game for you.

Of course, if you have seen the PlayStation version, the question you'll be asking now is - just how close is the Saturn translation. Well, as far as we can see, it's pretty high on identical. Certainly, the game play remains identical. The other question is, of course, is it any good? Well, obviously since this is a preview, we can't really say. We'll that's not to say that the full weight of our reviewing process won't be brought to bear next issue. Because it will. Oh-yes. Until then, look at these pictures and tremble.

Die Hard Trilogy is **actually** three games

in one - a Thrilligy, if you will.

We robbed the bank at die!

No FTP No money!

The hostage film of the night of John's filthy walk.

Help John McClane bring safety to the streets of NY.

Beakome chenter cities shy!

Put the bank car in part 2.

DARK SAVIOR

After what seems like millennia of waiting, we can now reveal an almost totally complete version of Dark Savior, which should be on the shelves by February at the latest! Hurrah!

BY	ULTIMAX
PRICE	TBA
STYLE	ACTION ADVENTURE
RELEASE	END OF JANUARY

THE PARALLEL SYSTEM

In case you missed the Coming Soon, Dark Savior is quite amazing in its Parallel Scenario system. At the beginning of the game you're trapped on a ship and how you handle this situation dictates which "parallel," or storyline you follow. There are five in total, and each parallel can differ depending on your actions during the game. Apparently there are well over 200 different endings...

Save the pretty hero.

Locate the hidden door.

EAGLE-EYED

In Dark Savior, you are cast as Gaman - a beauty hunter with seemingly mystical powers which means he always gets his man. Reeking him up are a bunch of different-colored eagle-style characters. Jack is the blue bird who is Gaman's constant companion. He does very little but advancing the plot and saving Gaman from plunging into large holes. Kaiser is the black eagle who reports your findings to the main heroes (it he saves your position) whilst red eagle Regina is native to the island and does little but swapping chocolate for points.

We all know which 32-bit machine has the best role-playing games. You'll have difficulty finding two on the PlayStation whilst the Saturn has the likes of Mystaria, Shining Wisdom, Story of Thor 2 and now... Dark Savior. If you haven't been following the coverage in the mag, all you need to know is that this game is by Climax - the people responsible for the legendary Landstalker on MegaDrive.

When you first boot up the game you can see the Landstalker influence: for the most part, the game is viewed in isometric 3D, although because the surroundings are made up of textured polygons, you can look around and twist the perspective to get a good view of everything. That's the other difference with Dark Savior. Not only does it look 3D it truly is. That means some huge

levels with an amazing degree of height (you can climb a tower and look down at the surroundings for example)

Having completed one of the game scenarios when the game came out in Japan, we can safely say that Dark Savior really does benefit from the English translation - the story is very deep and involved, which is just what you'd expect from an RPG, really.

What we have noticed is some changes. The hero Ryu Ya is now called Garion with his main villain called Blax (changed from the rather obvious "Vilain"). Also, cigarettes (said to be as poison in nature) have been changed to chocolate! Another amusing change is the Japanese character Seigal who now

From the creators of Landstalker, an awesome RPG adventure of truly epic proportions!

Garion's being pulled down the stairs by a large hole.

Your blue eagle friend locates the torturer's chamber. Lovely.

One of the tricky 3D platform tests polished above.

Garion saves a young girl just about to fall into the deadly liquid Blaxion.

Assessing first boss Blax, Garion is challenged by Death and his two henchmen.

What you can't see is the top wall of spikes slowly creeping up behind Garion.

Great plotlines and stunning polygon 3D backgrounds make Dark Savior one of the most eagerly awaited Sega Saturn releases for ages!

becomes Lante Blume garages which action "hero" he looks like!). Also, a Friday 13th Jason style character has had the eye-holes taken out of his hockey mask - how he manages to see when he attacks you is beyond us! This is all pretty unimportant stuff though and certainly doesn't ruin any enjoyment of the actual game. It's just a bit odd sometimes.

All in all though, we would pretty much go with the view that Dark Savior is the RPG of choice for all Saturn owners. Although the puzzles are pretty simple on the first parallel, things get very tough later on and the innovative multiple scenarios system means that if you don't get works and weeks of enjoyment out of this game, there's obviously something wrong with you.

As you might suspect, Dark Savior is very quickly coming up for the full review and showcase treatment. In fact, a PAL version should be materialising in SSM HQ just as you get to read this. Expect some very excellent coverage in the next issue!

Beating up the Stevo Seal looks like (above).

Using the Hyperion View to gauge your next move...

Garian: There is no time to be lost. Besides, I'm afraid this is not the game I once knew!

Rolling the cube...

Rolling the cube...

Beating Beeth, a player-controlled Blue jays into the hapless monster with a massive claw to the face! With a health level of 99, Beeth is clearly making progress in beating down the energy bar of his opponent.

ANALOGUE POWER!

The NIGHTS joystick is quickly becoming the essential tool for almost all Saturn titles (but fighting ones, where the ordinary pads are best). Dark Savior uses the pad really well. The directional pad and buttons work exactly as they do with the ordinary pad. However, the analogue part of the controller is used to control the perspective. There's nothing you can't really do with the ordinary pad, but using the new controller makes life a lot easier and indeed a lot faster in the realms of Dark Savior. So if you haven't bought NIGHTS, do so.

FIGHT! FIGHT! FIGHT!

Fighting is very cool in Dark Savior, kind of like Street Fighter. Sort of. Basically, it's the best of three worlds as you and your opponent battle it out. A range of three or so moves are included per character, including a Super Move you have to charge up. The good thing about Dark Savior is that here Garian can capture his foes in the last round and "become" them in later battles. This is pretty great early in the game where Garian is pretty weak. However, if you use another character, it appears that you can't capture your opponent. Hm...mhm.

This particular character is quite fast on his feet, but suffers greatly if the wrong end of Garian's Super Attack (above left). Outgung out of his way, his dual-faced opponent leaves Garian wide open to a counter-attack (above right).

Some of the stages stretch up right to the skies!

Here, Garian has to carry the body of a creature called Beeth back to his HQ.

Garian: So it must be you...
...the woman who entered Death Valley. Are you hurt?
I cannot reach you!

Letter

We tried to find some appropriate and tasteful way to mourn the passage of scruffy indie-zinester, *Radical Automatic*, into the sinister realm of music journalism. But then it occurred to us that, while we slaved over baking cookies with only Yarenee Piper Hot Liquids to sustain us, he was probably off in Monte Carlo sipping the froth off a cognacine with Lonnie while they re-animated the video for 'Naked' but with less clothing. Maybe. So we thought stuff him, the spewy, successful, highly-respected, well-paid, jet-setting god. Still, why not write to THE SO-LONGER-AUTOMATIC BUT MANUALLY-OPERATED MAILBAG, SEGA SATURN MAGAZINE, PRIORITY COURT, 30-32 FARRINGTON LANE, LONDON, EC1R 3AU.

WRESTLING' WITH THE TRUTH!

Dear Sega Saturn MAG,

I have been a fan of Sega for some time now, but not nearly as long as I've been a fan of the phenomenon that is the World Wrestling Federation and am very annoyed when your mag and that other mag persist to trash it every time you review it.

Making remarks like how depressing it is and how it's a load of garbage packed with testosterone, fat, muscle-head parasites. If that's the case why is the WWF mag selling more than the SS mag, and also is on a world-wide basis more popular than Sega and Nintendo. I bet you wouldn't say that crap to their faces. At least they get out and meet people unlike your computer nerd stuck in all day gawking at a TV monitor.

Do any of you get women throwing themselves at you or get cheered for every day? I don't think so.

The WWF will be here long after Sega reaches its demise. Wrestling is an art. It's in our blood way before Jesus Christ, back when man began. The video game is okay but has little passion to it, and also may remind you of that your crown jewel, a certain VIL-TUA RIGATEE, bases all its moves on wrestling. I don't care if their official style is Kenite or ninjitsu or whatever. Each and every one of the fighters uses wrestling and to prove it the move known as the Ruckenstein from Wolf was named that by the WWF and its real name is the Hurracanta (sic) so Sega must have done research on WWF to get moves. So when you play WF you're basically playing a wrestling game, so there.

Love White and Steve Gordon, London, EY

 Whiskipping superficial and out-dated media crass can be fun, can't it?

Judging by your letters, Lenax and Steve, the time has come for you to start that secret club you've always talked about. Remember, though, that aggressive recruitment practice may result in potentially harmful publicity, and certain ritual sacrifices are still considered illegal in this country - check with your local Citizens' Advice Bureau for further details. Lots of luck!

TWO FINGERS...

Dear SS,

We are writing in about the recent Nights camp. The major points that really pissed us off:

1. We had to play the game with a standard Saturn 1 joystick and even though everyone protested they wouldn't let it be changed. The cheeky gits even ridiculed the Saturn by saying that all as lot thought its joystick was parts.
2. The rules were changed several times as the hosts were obviously unfamiliar with the Saturn and Nights as no-one had a clue how to decide the competition.
3. After all the fuss about the rules it was decided that the player who scored the most hits on Fozzer Bell within the time limit on

screen would win the competition. Ben just so happened to whip the pants of everyone's score with an average hog (the highest on the day with the standard pad) and was then told they were adding an extra round after I thought Ben had won.

4. The competition was now running late and we were in fear that we would miss our train and Ben also had some photographs sticking his lens in his face. To make matters worse all the scores from the first round had been scrapped and Ben missed out and had nothing to show for it at the end of the day.

5. We knew I (Ben) was really the best on the day overall and should have won as no-one else said they could (potentially) beat any other courses throughout the game.

We felt the competition would have been run a lot smoother if someone was there to represent the Saturn camp. I am not that bothered about the prize now as I don't really want to turn into some skin-diving clowny wuss boy with ten million Twix wrappers stuffed in his car's petrol tank! But a few games would have been nice! By the way, where were you lol?

Ben Whittington and James Clements

 Tchew! There's just no pleasing some people, eh? And just because you didn't win, probably. Hopefully you won't end up carrying this bitterness to your grave.

OF FUM!

Dear SS,

Hi it's me, Ben. You know the one who came third in the Emag Images/Twix Junior Gameplayer Of The Year Finals in London. Just writing to say it was a cool event and was great fun, so do it again next year (next time beautiful, you won't be so lucky, HAH-HAH-HAH-HAH-haha he he... etc). Oh, and how about a Daytime CCE or a Marx TV time trial competition like the Sega Rally competition you did?

Ben Hutchings, Purley

 Well we're glad to see that at least SOMEBODY had a good time at the Twix Thing. Who knows just what wonders next year's competition will hold? If any.

JABBERCRACKERS: GOOD OR BAD?

Dear SS,

As you correctly pointed out in issue 13, fancying games characters like Phil Flipping Femmes did a very sad. But I am afraid that games developers are not exactly trying to present this horrific crime by making women characters a little too appealing.

For example that loss out of Tomb Raider. Now I don't want to get tasteless here but don't you think her breasts are a little too big? I mean how is she supposed to do her athletic activities in the game with the help on her chest?

Even that same a few more but you'll know what I mean. Even that other loss that was mentioned in that letter, Candy, she looks a bit outrageous and like that loss in Tomb Raider, a little too appealing.

Now please don't tell me that I am sad for noticing the features of that loss in Tomb Raider or anything like

Fanciful videogame characters - and we specifically list jabbercrackers - return in next our letters page.

that because they're not that hard to miss. Please print this letter, even if it has the word "breasts" in it. I am sure you've allowed to talk sensibly about such things without getting tedious, which I hope this letter hasn't become.

James A. Thompson, Hull

if you're worried about it, James, try to think of it like this: if game publishers didn't emphasize the secondary sexual characteristics of their female characters and stuck to realistic proportions, the relatively crude definitions allowed by vector graphics would make them all look like bikini with big pss. And where would the fun be then, eh? Anyway, James, the very fact that you wrote this letter indicates that you are less concerned about the sexual equality of women than you are about looking at their breasts. So, in fact, you are not.

I DON'T LIKE TO COMPLAIN, BUT...

Dave SSM

I'm having doubts on the future of my Sega Saturn. Before I bought my Saturn last year, I really had a tough time to make up my mind on which console to get, PlayStation or Saturn. The reason for my decision were that I always believed Sega is the company who knows how to make innovative games, eg NIGHTS! They are also the leaders in arcade games. Therefore, I'm always looking forward to getting all the marvellous arcade conversions from the AM groups which are always exclusively for Saturn.

But now my confidence in Saturn is a bit shaky. Why? When I look at the recent development in arcade conversions for Saturn, I can clearly see the limitations of the machine. It can't handle transparency effects, the resolution is always being cut down to speed up the on-screen action, eg Fighting Vipers, Virtual On, etc. Nobody can doubt that the technology in the arcade is just moving too fast for a home console to catch up with. For instance, I really doubt that VJ3 can be converted perfectly - nicely, maybe, but not perfectly.

On the other hand, the PlayStation is in a better position than Saturn. It can handle all the special effects, such as nice explosions and transparency. Though Sony can't produce their own arcade masterpieces they always have all the best original home video games, eg Resident Evil, Ride to Black, Female One, Wipeout 2000 and Crash Bandicoot! I think it is because the console is more powerful and more popular among the developers, therefore, PlayStation always gets the "first-hand" products, then we Saturn owners have all the clumpy, secondary products - same games but poorer quality and graphics! I am frustrated about the whole situation! I am a Sega fan and I really believe in the potential of Saturn, but I'm now really starting to think maybe I should sell my Saturn and get a PlayStation instead. How sad it is for me to think in that way. That's why I'm writing to you guys who are the top Saturn supporters and get impartial to give me your sincere opinions. Please convince me one more time before it's too late.

Mike T

Well, yeah, Mike. But you may be getting a bit carried away here. Though more PlayStation titles are coming out every month, it's not as if every one of them is an unattractive sex machine of a game. In fact those you've named, good though they are, are the best releases of the past several months. If you think about it there have probably been just as many good Sega Saturn games released over the same period. What about NIGHTS, Daytona CE, Virtua Cop 2, Street Fighter Alpha 2, Fighting Vipers, Teku Raider and Sega Worldwide Soccer? Just because the PlayStation can handle a few more graphical effects doesn't mean the Saturn is doomed. If you're worried about the quality of Saturn Virtua Fighter 2 just remember that (a) AMs are hardly likely to disappoint with a conversion of their own game, and (b) you will only be able to play this game on the Saturn.

I ALSO DON'T LIKE TO COMPLAIN, BUT...

Dave SSM

I have a rather serious point that other readers may possibly agree with. I am seriously considering buying a PlayStation. Yes, you read it correctly, I have gradually come to this decision on the basis that the PlayStation appears to have a much greater selection of games available (also partly due to the many third party soft-

ware companies producing for the machine). Games such as Formula 1, Resident Evil, Tunnel B. These games are brilliant. And don't give me the "but the Saturn is more powerful" rubbish again as that's all very well, but if there aren't enough good games to play on it then what's the point. Okay, everyone knows that the AM departments produce the best games, but that's about it and these games only appear a few times a year. Contact me if I'm wrong, but wasn't NIGHTS about the last game produced by Sega? In terms of third party companies, all the titles seem to have [previously been PlayStation titles that end up being six months late and pathetic (eg Wipout - too slow, Alien Trilogy - not as well presented and too late, Destruction Derby - enough said). And what about Doom (not knowing at the time of writing whether its even out yet!) - this is old news! Duke Nukem and Quake on the PC are far superior and these have been out for a while now. Failing of delayed releases, I like Sega's way of admitting that games appear in Japan months before they do here by use of their TV advertisements - "Here in Japan the over head flick is old news!"

I don't like to complain. I think the Saturn is excellent and I am not going to part with it, especially with Virtua Cop 2 and Daytona CE on the way. But maybe this will help persuade software companies that we developers can get a FREE implant at 50ms.

Chris Nightingale, Luton

And well you should not consider parting with your Saturn! It's true that it can be annoying to see good games appearing on competing systems while the Saturn is going through a dry patch. Some of the third-party titles may not be as good as they might be to, but bear in mind that there are plenty of Sega-programmed games which are world-beaters with-

Looks, coming to Saturn, but still off officially confirmed.

In these genres, or at least as much up to the best software on any other platform. For example, World-Wide Soccer, which you mention, is currently recognised as the best soccer game around. Though you may be right to say that Doom is getting a bit long in the tooth, you'll no doubt have been pleased to read in last issue that Quake is already being converted to Saturn (all going well). And there's plenty more stuff to look forward to in 1997 - how about: Fighting Magician, Sonic 3D, Virtua On, Mana TT and Xenon? Just keep the faith, baby!

PLAYSTATION PROCTOLOGISTS

Dave SSM

I was wondering about my local games store a while back when I spotted a Saturn. I decided to have a go and I have to say I was pretty impressed with what I saw, so I'm considering buying one. There's one thing that's got me a little worried however. This isn't a problem (and don't particularly like) was telling me about his brother's new PlayStation and how it was so great. I mentioned that I was thinking of buying a Saturn and he said I shouldn't because production of Saturn games was going to stop in about a year because Sega could not cope with the competition from Sony. He then dived on about the PlayStation's dependable memory or something or other I don't have a clue about. He said it would be even worse for Sega when the N64 is released. All of this sounds like a load of maggot-infested poop to me. There is no truth behind it is there? If not I will get my brother's PlayStation and personally shove it up his arse for being such a pratt.

Anonymous

That sounds like a load of maggot-infested poop to us. If there weren't laws against 'Incitement to Violence' we would happily go along with your playful dining sentiment.

WHAT YOU'VE BEEN WRITING ABOUT THIS MONTH

We want more cover: **CDV** - Is **Pypperr!** the coming out for Saturn? I'm thinking of buying a PlayStation. **Where the hell is Mana TT?** We want more games NOW! **Reborned is great!** OR **It's Bish P!** (Yes It Is - Nick)

Q&A

Another month, another Q&A, hosted as ever by your editor, Richard Leadbetter with able assists on the Sega bits by le fromage grande Mark Maslowicz. This month's mailbox was quite dull actually. Please think of some interesting questions, preferably not involving *Psygnosis' Formula One* or *Moto TT Superbike*. Send those extremely courteous and thought-provoking missives on their way to: **LET THERE BE NO DOUBTS ABOUT MY SKILLS Q&A, SEGA SATURN MAGAZINE, Priory Court, 30-32 Farringdon Lane, London EC1R 3AJ.** Once again, please be interesting. I'm dying here.

SPEED AND VIOLENCE ADDICT

Dear SIM,

I am a very proud Sega Saturn owner and am a bit of an up-and-coming game addict. So could you please answer my questions? Oh your mag is brilliant, fantastic, excellent.

1. On your *Young Car Feature* in Issue 9 I noticed Sega Saturn logos in the background of the car select screen. Does this mean that it's planned for a Saturn release?
2. Any news on the conversion of *Veritas Fighter 3* on the Saturn? Many people say it can't be done but I amongst many Saturn owners would be disappointed if AM2 did it in Linux by.
3. When is *Marvel Super Heroes* due for release and how much will it cost?
4. Why is the Saturn superior to the PlayStation in terms of game quality yet doing so poor in comparison as far as sales are concerned?
5. Is there much point buying *Veritas Fighter 3* if you already own *VF2*?

Edison Exams, North Wales

1. The Saturn logo are just for advertising purposes, but it is highly likely that *Sega Young Car Championship* will come to Saturn in the later part of '99 even though it hasn't been officially confirmed yet. As for AM2 has confirmed that *VF3* will come to Saturn in late '99 incidentally, last issue has also been announced for next year. 2. Try *March* app... In Japan I'd say it will be a Summer game for us. 3. This is a question I've often pondered. I [Rich] own both machines, got all the games for free, and I think the Saturn's a lot better. Just about the only game I've played on PS recently and enjoyed has been *Wipeout 2048* influence on Saturn I've had *Veritas Cop 3*, *Bayanna CDE*, *Veritas On Exhamed*. I wish you just believe the hype too readily. Having said that, that's probably the same reason why huge amounts of people bought *Megadrivers* a few years ago. 4. If you're a rabid AM2 fan, yes otherwise, not really.

VIDEO-CD VS LASERDISC

Dear SIM,

Since I purchased the Sega Saturn I have wanted to buy the MPEG video-CD edge. Unfortunately I haven't seen any of the VideoCDs available only near to here and there. However seeing the *Out Now* section in your mag, I was led to believe that they're still in production. I would greatly appreciate it if you could tell me where to buy any of the so-called VideoCDs and if you think it's worth it any way.

Keaton Chambers, Student AMU

Check out a mag like *Home Entertainment* and you should be able to find trackloads of well water companies who sell VideoCDs. Telling that, get your ass down to HMV as Virgin Magazines are weaker than, try PlayStation (used) to be due

Price Video). They call them. As for whether it's worth it, personally I'd save up my extra cash and get a LaserDisc player, but finding discs for that (especially on the UK) is just as hard. I get mine from the States (if you're on the net look at www.kon.com)

WE ARE NOT ACTUALLY SEGA

Dear SIM,

- As you in the hottest games mag around, please answer my questions to put my mind at rest.
1. Could you please tell me what football game I should get? *WorldWide Soccer* or *or visit www.ink.ig.com* out.
 2. Will *Mortal Kombat Trilogy* be coming out on the Saturn?
 3. Will you ever invent a truck racing game?
 4. Are JVC making a *Veritas Bowling 3*?
 5. Any chance of bringing out a post or soccer game?

Lee Davies, County Durham

1. Get *WorldWide* now. FIFA is going to have to be a regrettably radical improvement on the last version to even get near to the Sega effort. As for JVC, Williams have confirmed it. 3. Probably not me personally, although *Gemini* has *Hardware 444* (corrected last issue). 4. Hopefully not. 5. Any chance would be very slim indeed.

ENOUGH SUCKING

To SIM,

- You are pure genius ever got like amazing, interesting and clever. Anyway enough sucking up here are my questions.
1. I know the Saturn doesn't need upgrading to 64 bit but is it possible?
 2. How do you fuck up with your heels on *SEWS* get?
 3. How do you guys get your mag so damn good?

Vincent Stofski, London

1. Did you know that the Super NES was an 8-bit machine (although as capable as a 16-bit one like the *Megadrive*)? How many bits does not correspond to a machine's power. It's the closeness of the custom radio-video chips. What I'm saying is

WorldWide Soccer '95: The best, bestie game on console.

that the Saturn could be upgraded with, say, a new video CD processor and still be superior to *Wii* despite still being a 32-bit machine. 2. I think you're referring to the best left move in a direction, quickly move in the opposite direction and then move back (then press B). It's simple. It's horrible. Like yes, we love games, and Saturn games in particular. Couple this with tons of experience in journalism plus taking pride in our work and there you have it.

A BELATED FINAL WRITES

Dear SIM,

I am a Saturn owner and love *Veritas Fighter 3* and personally I don't think it's that good. Most of the special moves involve spinning kicks or punches. Being it's all graphics and no gameplay. The characters don't have the feel that you know them. For example, *Byo* is a fast, smart, hard biker but when *Cage* just some rings that walked on off the street. I don't know why it got the Game of the Year award.

I would also like to complain about *Digimon 3* Ball Street *Hyper Alpha* for PlayStation (at number 1 and 5th on Saturn at number 7) what's the difference apart from a better loading message on PlayStation? By the way how do you get *Juggernaut* on PAL. Is Mer because the cheat doesn't work.

I do not want to give my name in case some WP2 fan beats me up. But I live in Aberdeen, Scotland. Earth

You're talking out of your ass. *VF3* is the deepest, most involved combat game ever. All graphics and no gameplay. And how much more do you pay in that download you live in! Addressing your queries, *Juggernaut* has been taken out of PAL. It was. As for *Digimon 3*, it does seem a bit odd. *SEA* Saturn is superior in every regard - speed, loading time, the whole works. The difference between *SEA* to Saturn and PlayStation is even greater.

SHOOTING QUIZIES

Dear SIM,

- Please answer these questions for me.
1. How is *On Hard* Trilogy shaping up?
 2. Will you be able to use the *Veritas Cop* gun on the Hard?
 3. How many FPS is *Veritas Cop 2* running at and how good a conversion from the arcade is it?
 4. What will the modern be out?
 5. Do you think the price of the Saturn will have come down for Christmas?

Peter Collins, Hesperden, Herts

1. This month's coverage should not yet out. Indeed, it's raining at 30 frames per second and it's an *AVSICOMP* conversion. Buy it now. 4. Hopefully around *Barbar* next year. 5. It's not very likely. However, even major multiple chain stores have their own Saturn value pack. We reviewed them all in the last issue.

VIRTUAL INSANITY

Yet another brilliant coin-op conversion blasts on Sega Saturn courtesy of the world renowned AM departments! This time, AM3 deliver the goods with the ultimate robot battler, *Virtual On*. Join RICHARD LEADBETTER as we jump into the dark future of the Virtual Century!

Earth has descended into a new dark age, with the entire world controlled by giant corporate syndicates that control the media - and thus the thinking of the world's population. Faced to break free, enterprising men and women have broke free from Earth and have sought to colonise new worlds.

Wary of these developments, the syndicates are casting a beady eye over the rapid expansion in the colonies. This observation leads to the discovery of a powerful new technology on a hunched-out world in the year VC 0084. One of the larger corporations, DN, reverse engineers the recovered devices and produces stunningly powerful battle robots, named *Virtualoids*. Unfortunately, these robots prove to have a mind of their own, becoming increasingly difficult to control.

The DN Syndicate have a plan. Discrete attempts to find human minds compatible with the VOs (so-called VO positive brains) have been put into motion, with

arcade machines being created which have direct up-links to real *Virtualoids* at the DN test facilities on the moon.

However, disaster strikes when the central VR CPU housed at the test complex becomes self-aware with universally damaging implications. The central computer has activated the ultimate weapon - the dread *San Geron* - the base of the original colonisation that created the VR technology.

There is only one option. Operation *Message* is effected, with VO positive arcade players unwittingly taking part in an operation to use the DN syndicate's *Virtualoids* to destroy the central facility. Can you battle your way through the CPU-controlled VOs and destroy the final boss before it reduces Earth to remoulding ruin? One thing's for certain, the cold artificial intelligence behind the myriad *Virtualoids* will do everything in its power to stop you.

Virtual On is reviewed on page 86.

The bugler-wielding *Splinter* puts his special weaponry to work in an awesome 3D rendered stage from the labs of AM3.

CONTROL FREAK

The metal cyclone in the original *Virtual On* arcade machine is kind of different in that few jysticks are used to control your robotic counterpart. This system isn't new (it was first in the 1980s *Blaster Battle*), but the implementation is different. An arcade-perfect representation is available on the Saturn in the form of the AM3 dual-joystick controller, but the chances are that this is not going to be released in the UK. Don't blame us - you can get it on import. If you really must have it,

JOYPAD POWER!

Luckily, the common or garden joystick does the job pretty much as well. The d-pad controls the forward and backwards motions of your robot, with left and right strafing in the appropriate direction. The shoulder buttons on your joystick rotate your combatant left and right, allowing for full freedom of movement.

JUMP AND BOOST

As well as the simple movement controls of the *Virtual On* Cyber Sweeper, there is also the function of jumping or boosting. This feature is pretty obvious (although it also boosts some weapons). As you might expect this latter is used to speed around in a certain direction, but in actual fact, it also supplies extra power to key weapons systems. Also, by pressing a direction button in conjunction with boost and then firing off a weapon, you usually get different results. It's best to experiment here, but in our robot guide you should get some idea of which characters benefit most. Another advantage with the boost button is that if you've targeted your opponent, you automatically turn to face your opponent when you fire your weapon. This is the key to success.

Increasing his attack initial power at the fee - *General Bo*'s only "buddy" VR fighter.

Here's action from the arcade intro - the one it's *Splinter*'s turn to steel his staff.

VIRTUAROID TECHNICAL READOUT #1: TEMJIN (MBV-04-G)

Temjin is the Ryu or Ken of the Virtuaroid battlefields. He's quite fast in terms of speed and mobility, but is lacking in comparison to the heavier Virtuaroids when it comes to armor. Consequently he takes damage pretty easily. In terms of combat, Temjin is a very good all-round fighter with decent ranged weapons. However, he can be excessively dangerous in the area of close-quarters combat. A powerful robot, Temjin's only real weakness is his lack of stamina and his very poor performance at an attack.

BOMB Seemingly quite dull, this weapon has excellent defensive capabilities. The blast takes out all enemy beam projectiles in its radius, but doesn't affect your weaponry. If you can use it as a shield to launch your own offensive.

BEAM RIFLE Fires off a single beam pulse if used on its own. Beating's side-ways fires off four bolts, which aren't very strong. Recovery time on boosting attacks with this weapon are most impressive. In a forward-boosting scenario, Temjin fires two more powerful bursts.

BEAM SWORD At long range, burning beam cutters are fired at your opponent. However, the Beam Sword is extremely powerful at close range and has a very short recovery time, making it the weapon of choice if you're particularly adept at getting close.

Temjin's bombs can be used as a shield from various forms of weaponry.

Temjin does what he does best - zooming in close and clearing the way apart.

Temjin is an excellent close-quarters combat threat to the power of his Beam Sword.

STAGE: FLOODED CITY

An entire metropolis has been submerged underwater, with only five concrete towers protruding from the ocean. On the largest of these towers you'll find the battle arena. There are three buildings on either end of the tower, but really this is the closest you'll get to an open area, making this a good practice battle site.

VIRTUAROID TECHNICAL READOUT #2: DORKAS (HVB-10-B)

Dorkas may not be the most visible of Virtuaroids, but he is certainly the most stealthy sort of some of the boss robots in the game. A suit heavily armored, fearless of a void, Dorkas specializes in bombarding his opponents with a near constant barrage of high-yield explosives. His near slow motion activities can make him a bit of a sitting duck, and his boost capabilities are short-lived (he's also rubbish at air attacks), but the sheer power of Dorkas' (special, coupled with the vast range of boost weapons options make him a very good dueler.

HAMMER This has huge range, hovers in and flies over buildings, effectively nullifying cover. It's also fast enough to use when smashing foes who are recovering after a boost or jump. The various boost options available to the hammer aren't so useful.

FIREBALL Passes through most enemy fire and also has various boost derivatives. Forward boost produces an impressive stream of fire. Side and air attacks produce smaller fireballs which are less powerful. To be frank, the air attack is a bit of a joke.

PHALANX A combination of capsules and sea mines fire create a huge series of explosions. A full range of directional boost options are available, the best being the crackling forward boost onslaught. Definitely the greatest weapon in Dorkas' armoury.

Dorkas's Fireball attacks can be used in a variety of situations.

Boosting produces different results when used with your various weapons.

Dorkas is one bit intensely powerful, and his Phalanx attack is simply awesome!

STAGE: WATERFRONT

Dorkas's stage is surrounded on three directions by water alone, with a vast sprawling cityscape stretching into the distance. A row of buildings seems to be on fire, varying your cover. There are also some L-shaped bunkers which provide even more excellent defensive capabilities.

VIRTUAROID TECHNICAL READOUT #3: FEI-YEN (SRV-14-A)

Conceptually, Fei-Yen is the only "female" in the Virtuaroids on offer in Virtual On. She's also the fastest fighter in the game, but also the least armored, meaning that she takes a huge amount of damage compared to the heavy hitters. What is intriguing though is her ability to shift into Hyper Mode. After taking half damage, she changes colour and all of her weapons are powered up into ferocious versions of the basic assault ordnance. Her Heart Beam attack in particular is now capable of some truly horrendous damage.

BOWGUN Probably Fei-Yen's least impressive weapon. This bow fires a single plasma arrow which has a long range (and good recovery time). Boosting pro duces double the amount of shots. Fairly decent as a back-up.

HANDBEAM Fei-Yen's handbeam is a very versatile weapon. Firing continuous pink plasma bolts, it has numerous boost options which produce a whole stream of highly charged plasma. In Hyper Mode it gets snowflake-style bolts are fired which can't really help but hit your opponent, even just for miser damage.

HEART BEAM A very good air attack for Fei-Yen, and notable in its ability to recharge almost instantaneously. This attack really comes into its own when in Hyper Mode, when it knocks down your opponent and inflicts some pretty impressive amounts of damage.

This wide spread of plasma is one of Fei-Yen's excellent Hyper Mode strikes.

This synchronous display means that Fei-Yen has now initiated Hyper Mode attacks.

Fei-Yen is an extremely fast, and powerful, but when Hyper Mode kicks in.

STAGE: MOONBASE

A hexagonal battle site based on the surface of the moon (hence the name). Eight buildings surround a central open area, which has four spire-like things upwards into the skies. Fei-Yen uses this area excellently, her speed enabling her to reach cover with comparative ease.

VIRTUAROID TECHNICAL READOUT #4: BELGDOR (SRV-07-D)

A long-range attack VU based on the Raven exoskeleton, but equipped with an entirely different range of weapons. Although of medium build, Belgdor's high-yield weaponry makes him a slow Virtuaroid with very unimpressive boost capabilities. He has an attack for just about every occasion and in the right hands he is a dangerous force. The key is in using attack as a good defence, and going forward from there.

NAPALM Napalm is a very powerful tool for Belgdor to use. It strikes opponents even when they're behind cover. It only fires in a straight line (even when used with a boost), so it is best to stick to forward boosting here. The blast radius can be most lethal.

GRENADE The grenades aren't impressive unless used with a boost attack, where Belgdor can release up to five at once (they are sent off in a straight line too - if our hits, others are almost certain to as well). These weapons are pretty much disposable.

MISSILE Belgdor's most powerful weapon. The missile is a deadly threat - you don't even need to be locked on to secure a hit. The forward boost variant of the missile attack almost certainly hits home if the enemy is anywhere in a forward arc in front of you.

Belgdor's long-range missiles are the centre-piece of his attacking arsenal.

Intending projectile armor on a jumping Bal-Bal-Bow (who doesn't stand a chance here).

In close quarters combat, Belgdor does rather splendid jobs like Tangle and Apheland.

STAGE: GREEN HILLS

One of the largest battle sites in the game, there is actually very little cover indeed, making this something of an arena for the more powerful characters. The empty moss-green hills are of such a height that they block certain weapons, but the real key here is to take the high ground and use your lock-on to do the rest.

**VIRTUAROID TECHNICAL READOUT #5:
VIPER II (TRV-06K-H)**

Viper II is a fast, yet fundamentally flawed Virtuaroid. There are no complaints whatsoever about the power of his weapons. The 3-way missiles and the homing beam are immensely powerful in the right hands, with the vulcan being useful for gradually wearing down an opponent's energy. Unfortunately, Viper II's main problem is his propensity to take huge amounts of damage due to his weak armor. Although a character with some potential he is inherently weak.

TW MISSILE YW stand for over-way fire! A great weapon at close range, but must be used in concert with the homing beam for long range strikes. Forward boosted YW is a hugely powerful strike whilst sideways allows you to arc missiles over obstacles.

VULCAN Viper II's most irritating weapon. It has a short recharge period so can be used near continuously. When used in a boost scenario, you tend to get multiple streams of firepower so matter which boost direction you chose. More irritating than useful.

HOMING Viper's most powerful tool. Can strike behind obstacles, or can be used with forward/backwards boost in order to remove the arc of the beam's trajectory and thus strike at close range. Fairly fast to recharge. This is Viper's weapon of choice.

With his Homing beam and missiles, Viper II is a fast and deadly opponent in a scrum.

As well as looking cool, Viper II also has some of the best victory poses.

Setting Down, Viper II immediately fires off his dreaded Homing Beam.

STAGE: AIRPORT

This deserted airport is surprisingly devoid of runways, although there is a helipad. It also happens to be densely packed with buildings of different height towards the centre, with strips of concrete running around the edge. Very definitely a site favoured by the faster Virtuaroids.

VIRTUAROID TECHNICAL READOUT #6: BAL-BAS-BOW (XBV-13-t11)

Being large and slow usually means that a Virtuaroid tends to be very resilient to damage. This isn't the case with Bal-Bas-Bow who remains very weak regardless. Individually his weapons are also quite rubbish, but for the way the soul operates they do the job pretty well. His main tactic is to absorb energy fire with the aid of the ring laser and then retaliate. Bal-Bas-Bow goes down in history as the least popular character in the game - which is as much to do with his preferred tactics as it is to his rather bovine, porcine appearance.

F.M.M.E. '9' stands for floating! They have a class honing capabilities and will always lift provided you give them a fairly decent aim so begin with Boost options provide move mines, but it's best to use sale mines to build pressure.

RING LASER Not the most powerful weapon, yet useful nonetheless in that it has the ability to absorb energy fire. Don't fire it too quickly because it's slow to recharge, so it's best to use this as a defence in conjunction with another weapon (as offense).

HAND BIT (88)'s hands fly off to the opponent and open fire. It's not very powerful unless you unleash it whilst in the air. When you do this the full power of the so-called "Satellite Laser" is invoked. It fires eight powerful beams of pure foe and can put a severe dent in any type of armour.

In a close range combat, Bal-Bas-Bow is adequate but, has poor defences power.

Jump in the air and release your super move to fire off the dread Satellite Laser.

Using the Ring Laser in conjunction with boost leads the area with fire.

STAGE: RUINS

Although not as large as the Green Hill stage, the Ruins have a great fluxion of space because the centre of the level is completely devoid of any noticeable architecture, but some small Easter Island style statues. A raised area around the perimeter of the arena is the only noteworthy aspect of this stage.

VIRTUAROID TECHNICAL READOUT #7: APHARMID (MBV-09-C)

Apharmid is character similar in appearance and weaponry to the Virtual On staple character, Tenjin. He has a bomb just like Tenjin and his plasma sword is similar as well, deploying beam cutters at range and being powerful at close range. However, Apharmid benefits from a more powerful super attack, with the Tongfer being a more versatile weapon. This character has been made with speed and stamina in mind. Although some of his weapons seem to work a bit strangely, he can still be a most formidable force.

BOMB He can throw these farther than Tenjin, but overall their use remains the same. Use the blast radius as a shield and fire your own weapons through it. Also, with the boost engaged, the bomb can be rolled over buildings.

SHOTGUN Like a real shotgun, this is more powerful at close range and loses power the farther away it hits. Boost options give a wider spread, but only the forward boost has any landing effect, and your foe needs to be pretty much in front of you.

TONGFER Along with Taden's laser, the Tongfer is excessively powerful. At range it's very weak, a Tenjin-style Beam Cutter being fine. It's best to use Apharmid's speed to get in close and get in a short range power strike. Because that's really what he's best at without a shadow of a doubt.

The Tongfers are engaged and yet another top-like opponent falls before Apharmid.

Apharmid's advantage is speed, which is great for getting in close and angling the opposition.

Apharmid strikes at close range and drains off total amounts of energy.

STAGE: SPACE DOCK

Being the first area of the game's second phase, you can expect an open, easy-to-navigate site and that's exactly what the Space Dock is. The only detail you find is a space cruiser on a runway and a couple of warehouse-style buildings on the edge. Again, more of a level favoured by the faster characters needing more space.

VIRTUAROID TECHNICAL READOUT #8: RAIDER (HVB-05-E)

Raider is the preferred VR for beginners just getting into Virtual On. Far from being a basic old Virtual rail, in actual fact he is a powerhouse of destruction! It's possible to massacre most of the CPU opponents by starting every round by firing off your lasers. Most foes don't get out of the way quickly enough. Bye bye 50% of your energy! The bazooka and laser are horrendously powerful, but this is kind of false news by the very nature of the G Bomb, which is about as useful as a one-legged man in a sausage-ticking contest.

G BOMB Two words best sum up the G Bomb and they are "oh" and "dear!" Although the blast takes out beams weapons, using it like this is next to impossible. It's best used to create some explosions and put the wind up your enemy a bit.

BAZOOKA As it's powerful and very quick to recharge, this is Raider's staple weapon. Forward boosting provides a devastating onslaught and you get with with a side-blast (although you lose two-thirds of the power with this strike).

LASER It looks awesome. It's supremely damaging and it scores the wiles out of a nyonero who dares challenge the power of Raider. A standing blast is most powerful, but the hovering boost variants are still stronger than most other VR's super-attacks.

Raider's Bazooka fires multiple hits, if they all strike, it's...very painful.

It's a bit Raider's Laser starts annihilates enemies, should it hit.

Raider engages a foe, firing off his firing Laser and taking cover simultaneously.

STAGE: DEATH TRAP

Perhaps being this final stage a "death trap" is a bit of a misnomer really. Having said that, this level is composed of a circular enclosure of buildings, which makes for some very interesting battles. A huge central building also provides some cover, although you'll find the alignment of the other structures is a bit of a big part.

GAME

BEATTIES

SATURN IS A TRADEMARK OF SONY ENTERTAINMENT INC.

Command and Conquer features some brilliant cut-scenes - and this picture (below) is a nice version of what's in the game. Looks you at?

Action aplenty from some of the later missions in Command and Conquer. Above, the Brotherhood of Nod forces attack their hell-spawns might against a GDI base, targeting their fiber-optic processing facilities. To the right we see an equivalent strike from GDI. They're using the sheer numbers of their forces to breach the Nod base, taking out targets in no specific order - just destroying all in their path.

The Brotherhood of Nod continue their operations against a GDI stronghold target. Concentrating their fire on the GDI main power generators, they're successful in cutting the juice, disabling the facility and making it easy to conquer in the picture (left) and above (left) we see the GDI continuing their attack, selecting fast, lethal aerial forces to inflict damage on key targets whilst the ground forces start a rampage.

LET THE BASE KICK!

This is it - the chance for all Saturn owners to vent their megalomaniacal urges in what must rank as one of the best games on the 32-bit system! We're talking about Virgin's *Command and Conquer*, the essential war videogame out now! A strategic genius with severe delusions of grandeur, RICHARD LEADBETTER writes...

If the 94% rating in this month's issue of SEGA SATURN MAGAZINE doesn't do the job convincing you, maybe this shortness will. Occasionally a game comes along that poses extremely easy to get into and utterly impossible to get down. *Command and Conquer* is such a game - extremely simple controls meshing with absorbing action to make this one of the best Saturn titles I've ever played.

Two forces have entered at key strategic points and are engaged in heavy combat. The cause of this fighting is a precious mineral ore known as Tiberium. Whoever controls the Tiberium controls the conflict and thus wins the war. Expect no battles to be long. And bloody.

TWO SIDES OF THE COIN

In *Command and Conquer*, you get two separate CDs, load up one and you get to experience the New Global Defense Initiative. This organization is the good-guy, government "good guy" task force. Their job is to take down the evil forces, which are known as the Brotherhood of Nod and of course to protect the world's oil reserves.

Opposition to the Brotherhood are also the Brotherhood of Nod. Things are a little different with these guys as their job can be summed up with one word: domination. Right or wrong there to be protected for these guys - they'll kill any

any way, the bottom line is that both sides have different agendas, different technology and different methods. And you can get to play as both! As you might imagine, this is ACE.

A bit later on in the showcase, you'll see just how radical these two factions are as we dig deeper into their technological means. But why two CDs? Well, each faction also has a completely separate storyline which means totally different full-motion video cut-sequences. That's where all the memory has gone.

THE CONTROLS ARE SIMPLE

Getting to grips with *Command and Conquer* is exceptionally easy. The game is run using a point and click interface, kind of like Windows on a PC. To take control of a unit under your command you just click on it and then select a place for it to go or an enemy target to attack. Again, like Windows, you can select multiple units by holding down on the buttons and dragging a box around all of the units you wish to control and then giving them all a single destination or target.

Obviously, you can't be in control of everything at once, so the computer does all in for you on the odd occasion. For example, if one of your units is under attack it will automatically return fire unless you have given it a higher priority task (such as running away).

Despite this, you still get the idea that you are entirely in control of what your units do. And as you play *Command and Conquer* just feels superb to play.

A Tiberium-based weapon is used to attack and capture Brotherhood of Nod structures. Tiberium-based weapons control with two different and light military vehicles is one operating line.

DIFFERENT ROUTES

Command and Conquer tries its best not to be a totally linear game. As with although there are around 15 missions to complete for the GDI or NOD, your performance in key areas can take you onto different paths. In all, there are over 30 missions to wade through, so finishing the game with both the GDI and the NOD isn't the end to the game's playability - there's lots more to discover by re-playing the game again and again. Now that's impressive.

MISSION SUCCESSFUL! GOT AMMUNITION AND JEEPS!

In Command and Conquer's precursor, Dune II, battle for Arrakis, the objectives of most missions were pretty much identical. Build a base, find the enemy and put them to the bullet. In C&C, things are a whole lot sophisticated. There are the enjoyable search and eliminate missions, of course, but there are bunch of others too such as commandeering a small task force in order to take out a specific target or to break out some prisoners or what-have-you. The fact that the NOD and GDI have different methods also has a huge bearing on the make up of the mission.

DARK FORCES

Start the game and you'll notice that everything is in the dark. Apart from a small amount of landscape showing around your soldiers, everything is hidden. The key to seeing what's what is to advance your forces. Whenever they go, the landscape appears around them. Getting a communications centre gives you an overview map of all the land you've uncovered. It also shows all of your units and any enemies in this area too. Sometimes it's a good idea to sacrifice some smaller units in order to reveal more of the map. This can help you get more of a warning when the enemy prepares its next onslaught.

BASES LOADED

As well as commanding your units, there's a great deal of construction involved in Command and Conquer. Organising a base to create new troops and harvest the surrounding Tiberium is a carefully balanced act that is especially critical on the later levels. Should you invest your cash in a top watch Tiberium harvesting operation and hope the enemy hold off long enough for the investment to come in? Or should you concentrate on troops first? It all depends on the mission, really.

Command and Conquer is reviewed on page 33

TROOPS, TOWERS AND TIBERIUM

Command and Conquer basically boils down to three different types of job. Getting a balance between all three is the key to success.

1. Control your units. The basic control mode text covers this pretty succinctly. Guide your units around, do battle and kill stuff.

2. Construct a Base. Do this in order to successfully carry out your mission. Erect power plants, barracks, Tiberium processors and long range weapons.

3. Harvest Tiberium. Build a processing plant and then dispatch your harvesters to the prosaure. This mineral pays for your military operations.

1. CONSTRUCTION SITE

The most important building in the game. The Construction site is used to create all other buildings. It's irreplaceable.

2. ADVANCED POWER PLANT

Much advanced technology requires greater power. Hence the creation of this enhanced power facility.

3. BARRACKS

This place is constructed to build and train your foot-soldiers. Build more to increase the speed of troop production.

4. WEAPONS FACTORY

This facility is the hardware equivalent of the Barracks, providing the technology to create all manner of light and heavy units, both for the ground and air.

5. COMMUNICATIONS CENTRE

Keep a good look at the overview map with the aid of this centre which tracks all units in land that has been revealed. Get this when the money's really rolling in.

GDI MAP

6. ADVANCED COMMUNICATIONS CENTRE
Micro-wave based satellite technology is the key to this building, which targets the incredible power of the GDI's Ion Cannons.

7. LABORATORY

Not a building you can create. This is the home of Tiberium selected Dr. Morbus, so this is a particularly valuable \$50 target.

8. POWER TOWER

Based usually around the edges of GDI bases, this unitless land death of any \$50 interlopers.

9. ADVANCED GUARD TOWER

Instead of land, this defensive unit needs to take out both ground and air forces that dare attack.

10. REPAIR FACILITY

You can use up your credits by repairing damage done to your units with the aid of this facility. It's a slow and credit-intensive job though.

1. POWER PLANT

You need power in order to construct anything else. This is always the first thing you build after deploying your Constructive SAs.

2. HARBOR OF NOD

Typically after your Power Plant, you build the Harbor of NOD. This building supplies NOD troops. Build more than one to create troops quickly.

3. TEMPLE OF NOD

The Temple of NOD is the equivalent to the GDI command center. Give you a better strategic view of the map.

4. TIBERIUM PROCESSOR

This is the centerpiece of your Tiberium Harvesting operation. Buy one and you get the harvestor free.

5. SLD

The Processor can only hold 1000 credits' worth of the precious ore. The SLD enable you to stockpile 1000 credits more. Essential, really.

**6. TURRET**

On later levels where aerial attacks are prevalent, the Sun SAs in your best defense, obviously.

7. HELIPAD DELIVERY SERVICE

The NOD forces provide the troops quickly, safely and efficiently as opposed to the more conventional GDI technology. And they do it with SAs.

8. TURRET

Positioned around the perimeter of the base, the turrets lock on to harassing enemy forces and shoot them until they are dead. Before they get them up first, obviously. This can help free up troops from guard duty.

9. OVERLORD OF LIGHT

One of the most powerful forces in the NOD arsenal, this unit breaks incoming invaders and kills them with a high-power laser beam.

UNITS UNITED

Regardless of whether you're GDI or NOD, the attacking forces at your disposal can be split into several different types. The key is to learn the strengths and weaknesses of each and using them in concert to best effect.

SOLDIERS

On the earlier missions with the low tech levels these form the main body of your forces. They come in various different types depending on whether you're GDI or NOD. Mini-gunner are the basic soldier for both sides, moving on to the likes of Grenadier and Assault on the next tech level. Later on you get flamethrowers and tank-like. All foot soldiers are pretty weak, and low energy by walking over Tiberium (which is reflected).

**SEA-BASED TRANSPORT**

Some of the missions see you on the edge of the coast, and here you get some assistance from your sea-based vessels. Indeed, the GDI start off the game with the Patrol Boat inflicting missile death on NOD scouts, patrolling from east to west. Also of note is the hovercraft which often arrives to deploy additional reinforcements and maybe even your mobile construction fortress.

**VEHICLES**

A vast amount of different ground based vehicles crop up during the game starting from Dune Buggies and going right up Stealth Tanks and flame-throwing tanks. Sometimes vehicles can be used for other things - for example, the best use of the APC is to carry your troops about as opposed to engaging in battle. Your Tiberium harvesters should also be included here. They have no offensive capabilities - save turning over feet soldiers (which is quite amusing, actually).

**AIR ATTACK**

Unlike Dune if you have full control of air units and there are a vast amount of them on offer including Anti-tank bombers, transport Helicopters and other types of flying menace. These guys only really crop up on the later levels, but if you watch the GDI demo you get a great view of the power of the airborne forces. They can get anywhere at great speed and although they aren't too heavy around, there's little that can really touch them (apart from SAM missiles).

Christmas NIGHTS™

into dreams...

By the time you read this, you really should have got your hands on a fully complete edition of Christmas NIGHTS™ - the Sonic Team's incredible festive giveaway, as premiered in the last issue of SEGA SATURN MAGAZINE. It's more than just a demo disc. In fact, it's far superior to a great many full-price titles. But it's FREE! For more details on this genius game, just take a look at these pages, written by RICH LEADBETTER.

When I first saw NIGHTS Flower it was going to be the king of games. Unfortunately, I kind of messed out on the NIGHTS system that gripped the office where I first came out in Japan on account of the fact that I was on holiday, recovering from nine months of continuously working four hour weeks doing a magazine called Maximum.

Only now, by playing Christmas NIGHTS, have I realised what I've been missing out on. So, first of all, for you fools out there who haven't played the full price game, GET YOUR ASS DOWN THE SHOPS AND BUY IT. It's the best sixty quid you'll ever spend and you'll get a spunky new controller which will become the essential Saturn pad for all future games (or fighting ones).

But why is NIGHTS so great? For a start, the audio-visuals are beyond compare, the gameplay deep and compelling. Yes, you can complete it in an afternoon, but the real skill is in racking up huge scores, just like in the old days of videogames. Oh yes, NIGHTS is a classic. The playability is near-perfect, putting it on the same level as Virtua Fighter 2, which is a huge compliment coming from me.

IT'S MORE THAN A DEMO

For those still not convinced, Christmas NIGHTS is the perfect opportunity to sample the NIGHTS phenomenon. You get an entire level's worth of festive NIGHTS, which changes depending on if you choose to play as Elliot or Clark. Also, the game layout differs considering what time of year it is. Christmas NIGHTS, for example is the game variation you get on the run-up to December 25. New Year NIGHTS is yours after January 01. All versions have different layouts. Typically, the longer you've had the game, the more difficult it becomes, but the important thing is that THE GAME CHANGES OVER TIME! (a'! that a mark of genius? Of course, you can reset your Saturn clock and play whatever game variation you want if you're a cheat, but somehow it doesn't seem right. A bit like kissing your sister (not that I have one).

suffice to say, although it's no replacement for the full-on NIGHTS (in fact, it's a supplement) Christmas NIGHTS has more stability than many full-price games. Only it is FREE, a gift to loyal Saturn owners from the Sonic Team. Now that's class.

The basic game engine is identical to full-price NIGHTS, but the graphics are all-ours. And!

Take your steps to the Christmas tree.

As you can see, when you select Christmas NIGHTS, the spacious character switches into his lanky festive costume! Oh, as a different note, if you own Christmas NIGHTS and think you have found everything (or you've spent all the presents), try calling the date on the Saturn's memory in April 1 for a nice surprise. Who knows how many other such bonuses are in the game. Well, the Sonic Team do, but they don't count.

OOOROJIMA!

We could go on for hours about the gameplay in NIGHTS, but we've done it before in previous SEGA SATURN MAGAZINES. Despite the initially confusing layout, your task is simply to collect 20 chips, take them to a cage (in this case, located beneath a Christmas tree) and then return to where you first found NIGHTS in order to move on to the next course (there are four of them before the boss, Gilling, makes the scene).

Going through hoops and collecting objects quickly in succession racks up "links" - the higher the link, the more of a Master you are and the higher ranking you'll get when you return to NIGHTS' lair. This bit is the real challenge in NIGHTS as the chip-collecting bit is about as difficult as putting on a hat.

BUT WHY?

Chris and Elliot, the main protagonists in NIGHTS are getting off festive in the amazing Christmas card style full-motion video intro. Unfortunately, their town's awesomeness festers by missing an essential component - a shining star that night, as Chris and Elliot drift off into sleep, they team up with NIGHTS to supply the missing star, and so begins an all-new adventure! Plus! NIGHTS gets to put on this lovely new Christmas costume he's been waiting all year to wear.

NIGHTS BEFORE CHRISTMAS

(Copyright © copyright Paul Draving) The main idea of this feature is to show off the myriad presents that the Sonic Team have hidden in NIGHTS. You see, every time you complete the four courses and dispatch the boss, Gilling, you're taken to a Palace-style game.

A neat array of cards are laid out in front of you. Turn over a card to produce a symbol. Match up two identical symbols to get a Present. It's that simple. Return to the title screen and check out what gifts the Sonic Team have bestowed upon you... There's some amazing stuff in there, most of which is revealed in this feature. It's also exclusive to Christmas NIGHTS. None of the other stuff is in the real game, emphasizing still further why this is a supplement to the full title, not just a demo.

The party poppers on the steep descent off tons of ornaments and symbols when NIGHTS hits town.

The most NIGHTS keeps around in the yuletide edition of the game, but they've been graphically updated with decorations. Yeah.

An enormous Christmas present completed!

Ever have dreams where you're running about in your pajamas? Well Chris and Elliot dream about being dressed on the nights when it comes to the festive period. Or so it would seem.

I WANT THIS GAME, NOT EXCUSES

Christmas NIGHTS is currently available when you buy a Saturn or some software from selected retailers (ask your local high street shop for details). It's a game that is as essential to the Saturn as Rally, Virtua Fighter and indeed, NIGHTS itself! Alternatively, you can score a bit of a Saturn double-whammy by turning to page 64 now. We have a limited number of copies of Christmas NIGHTS to GIVE AWAY when you subscribe to SEGA SATURN MAGAZINE. Go on, you know you want to.

I HAVE FELT YOUR PRESENTS

Yes, I feel that healing before, but it rained a few laughs last time, so why not see it again? Suffice to say, this part of the showcase is all about the gifts available for cunning NIGHTS players to uncover in this master's tale.

LINK ATTACK

We showed off Link Attack last month, but for completion's sake, here it is again. One course from the original game's Fusion Ball level has been included and here it's possible to continuously go through hoops and collect objects with no delay, allowing you to rack up an enormous link! Brilliant and! Delicious NIGHTS keeps track of high-scores, a great feature for ghosts.

MUSIC BOX

CyberSound is one of the best things about NIGHTS. Depending on your actions, the music in the game changes to reflect your actions. Amazing! Should you reveal this gift, you can mix up your own CyberSound soundtrack on the special screen and then play the game with it. Ace.

THE NIGHTS MUSEUM!

When the Sonic Team put together NIGHTS, every aspect of the game was carefully planned and crafted. As you will discover, you can check out the NIGHTS Museum presents. These are about 100 screens which you can flick between and show off the original art assets of the main characters and Nightspires and what have you. All of the original promotional artwork is also available here. This all just goes to show how much thought and detail has gone into this classic game!

TWO VIDEOS!

Two promotional videos were recorded to advertise NIGHTS in Japan, and this is your only chance to see the amazing CG rendered sequences that the Sonic Team created. The first video comes from the 1996 Tokyo Toy Show, where NIGHTS made its debut to the Japanese Soften fans. The second is a Summer Special vid, again crafted by the expert computer graphics renderers of Sonic Team HQ. Very entertaining for a short while.

(LARGE) Some footage and some familiar FMV in the first NIGHTS vid.
(SMALL) Diment plays basketball in a bizarre Market-square video experience.

NIGHTS GOODS

This present shows what marketing phenomenon NIGHTS is in Japan. The full range of NIGHTS goods, including toys and artwork is revealed here, along with promotional materials for the award-winning but teeny-bop (due to its west) courtesy of Sega of America.

The NIGHTS hat is particularly stark out as being real infectious.

The Japanese NIGHTS merchandise is far more beautiful in real life.

NIGHTSIAN COLLECTION

Check out the inhabitants of Christmas NIGHTS' Spring Valley, along with all of the Nightspies in the full version of the game (if you have saved data on your Saturn). The full range of A-Life beings has still yet to be ascertained.

KARAOKE MODE

That NIGHTS soundtrack ain't it's a bit of a toe-tapping experience and now you can join in without memorizing the lyrics, thanks to some on-screen prompting as NIGHTS does his "thing" in the background.

TIME ATTACK

A bit more canning than Link Attack, this version of the game gives you another single course to zoom around and it's your job to blast around the layout, collecting EVERY item in the shortest possible time. Once again, every high-score is recorded. Should you miss any item, your effort is judged null and void (expect NIGHTS to appear in your dreams and give you a good slap around the chops).

BUT BEST OF ALL... SONIC INTO DREAMS!

Here it is, the official debut for Sonic the Hedgehog on Sega Saturn (unless you count that cobby caven in bug) from the hands of the Sonic Team in Sonic the Hedgehog Into Dreams, the noted spiky mammal drifts off into the land of NIGHTS, only to discover that the DreamMaster is nowhere to be found! If there's any evil to be vanquished, Sonic's going to have to do it himself while NIGHTS takes a well-earned rest and eats some pies or something.

In actual fact, this present is much like playing with a turbo-powered Clavis or Elliot. NIGHTS is firmly out of the picture as Sonic hurtles around the landscape, collecting chips, performing enormous leaps and whatever you.

The big news, though, is that Gibbing is no longer the boss here - Robotnik strikes in his place! In a sequence very similar to Puffy's boss area in the full game, it's down to Sonic to grab hold of the robot Robotnik and smash his blubbery hide through various walls it's most brilliant indeed.

SONIC BOOM!

Compared to the 3D platformer Sonic the Hedgehog, Sonic Boom is a 2D, side-scrolling platformer. The programmers were smart to make the feel of the controls very familiar to anyone who's played the Sega's classic games. Sonic still dashes, spins, and slides with exactly the same speed and grace. He doesn't need being new, it's all quite easy.

A Sega console without a Sonic the Hedgehog game? Why, that's simply incredible! And yet that's just what the Saturn has been... until now! PAUL GLANCEY reports.

Ever since his platform escapades began on the Megadrive in 1991, Sonic the Hedgehog has been a major success for Sega. It has even been said that it was the Sonic games that established Sega's presence in a worldwide console market dominated by Nintendo. All of which makes it all the more amazing that Sega have waited this long to bring him to the Saturn!

There were some Saturn-based Sonic projects on the list at Sega of America earlier this year, notably Sonic X-Isms, but when the head of the Sonic team, Yuji Naka, saw a work-in-progress version of a new 3D Sonic game for the Megadrive he thought it was so good that he asked that all other Saturn Sonic work be put on hold in favour of a conversion. Sonic Blast 3D is the result of that decision, and it's scheduled to finally hit the shops in February of 1997.

Sonic Blast 3D once again pits the famed high-speed hedgehog against his old arch-enemy, a web-upholstered madman called Dr. He Robotnik. In the seemingly never-ending quest for the all-powerful Chaos Emeralds.

It seems the Chaos Emeralds are currently residing somewhere on Flicky Island, under the protection of the ikakabutsu, a race of cute pan-dimensional bird creatures called the Flickies. Dr. He Robotnik has discovered the whereabouts of the Chaos Emeralds, and has set up defenses around Flicky Island to prevent anyone

from disturbing his stash. Among these defenses is an army of robot badniks which are powered by living creatures. Similar to what he is, Robotnik is using the Flickies themselves to power his badniks, capturing them with his own three-dimensional Big Ring Portal Generators which the Flickies feel compelled to fly into.

With the safety of the planet of Mobius at stake, it's up to Sonic to get to those Chaos Emeralds before Robotnik does. To do that he has to explore Flicky Island's many (isometric 3D) landscapes, swinging up the golden rings that are just lying all over the place. Once he has collected enough rings he can trade them in for a tip into the game's bonus stages, wherein he the Emeralds themselves.

While he's doing all that he also has to rescue the Flickies from their infernal imprisonment by swishing their robot shells and leading them back to the nearest Big Ring. Whew! All of the Flickies have been sent back to the Flicky Dimension, Sonic can zip onward to the next part of the level.

Any seasoned Sega player will realize that Sonic Blast 3D employs all the traditional Sonic paraphernalia that made the games such a hit with Megadrive, Master System and Game Gear players in the past. Now, with the benefits of isometric 3D Saturn-powered graphics and CD sound, we should be able to expect this game to be the best of the lot! Read on, and salute in anticipation of our next month's review of Sonic Blast 3D, in which the truth will out!

Sonic BLOOM! By The Hedgehog is catapulted skywards in the Spring Stadium zone.

SONIC BLAST - THE MOVIE

One thing that Saturn Sonic Blast 3D has that the Megadrive version didn't is this cool animated intro which appears as soon as the game boots up. Gaze in wonder as Sonic arrives on idyllic Flicky Island! Gasp in awe as he runs about at various blurring velocities! And cheer joyously as he launches into a spin-dash attack that smashes evil badniks and releases the cuddly Flickies (unimpressed, unless! Too! Too! Sonic warrior!

HEDGEHOG 'IN THE ZONE'

In *Sonic Blast* tradition, *Sonic Blast 3D* is made up of 'zones' divided into 'acts'. Seven zones of three acts each makes a total of 21 levels, but even these are subdivided into different sections. Each section has its own complement of Flickies to find, and once you've sent them back through the Big Ring to their own dimension a landscape is revealed that transports Sonic to the next part of the act.

Zone 1: Green Grove Zone

The *Sonic Blast* equivalent of Megadrive *Sonic's* Green Hill Zone, with polygonal palm trees, hedgehog-skewering spines and high-speed loops-the-loop. The Flickies are encased in the mechanical forms of slow-moving beetles, worms that leap from holes in the ground and pyramidal Mob monsters with rotating spiky balls. They're all pretty easy to handle, though, so this is a fairly easy zone.

Zone 2: Busty Rules Zone

Funk, Enigma-style, techno-charting is a night-club music back the action in this misty and mysterious castle level, alongside the overgrown remains of Atlantean. Watch out for the robot bees and mosquitoes which contain the kidnapped Flickies, and the spinner tiles which turn Sonic into a whirling, twirling, rock-rolling, head-nik dancing maniac.

Zone 3: Spring Stadium Zone

Robot jester fish, mosquitoes, crabs and tentacles terrify the hedgehog in this zone, but even more dangerous are the spiky floor panels which also into the series of Sonic's little feet. To make matters worse, the place is full of pinball bumpers which fling Sonic around as if he were a small marionette in a pinball machine. Luckily the jazzy circus fanfares keep the mood distinctly upbeat.

Zone 4: Diamond Dust Zone

No platform game would be complete without an ice level, and this is *Sonic Blast's*. While sleighbells 'jingle all the way', Sonic faces Flickies from the steel shells of robot penguins, barrels on page sticks and Death-coque killer snowmen.

Zone 5: Volcano Valley Zone

From ice... to fire! Dramatic music and sulphurous odours fill the air (though you have to ignore the latter), as Sonic dodges arrow pits of frothing lava and gurgling molten pools. This is a landscape that bristles with deadly laser gun barrels and it's patrolled by mechanical ladybirds, wasps and scorpions, none of whom hold out the claw of friendship.

Zone 6: Dime Gadget Zone

Floor-fitted fans blast our hedgehog hero into the air at strategic points in this stage, while electric tiles zap Sonic's toes with shocking force if he's wont to dangle. Robots in the form of beamster rats and death-dealing octopods are the other threat here and Sonic also has to worry about finding his way through a network of pipes which connect the different platforms in each act.

Zone 7: Panic Puppet Zone

This is Robotnik's lower sanctum where Sonic's mission is simply to find the evil egg-shaped gem and thrust his backside about. While ominous beehive fumes hang away in the background, Sonic threads his way between high-tech electrical circuitry, bubble gum and spiky robots. Check out the ever-looming presence of the giant Robotnik in the background!

VENGEANCE OF AN EGG-SHAPED MAN

That Dr. Robotnik! He's a magnificent over-stuffed oldritch! He hates to be third, not even first, and he's willing for Sonic to form up so that he can smash in his tiny blue skull with some superior Sonic-proof robot.

As soon as Sonic arrives, Robotnik descends with an evil cackle and unleashes the full might of his mechanical monstrosity in the form of missiles, giant spiky bats, planes of flame or something even worse. Fortunately, Robotnik isn't completely safe inside his robots, and if Sonic times it right he can bash in Robotnik's cockpit with a devastating spin-dash attack. Score enough hits and Robotnik flees with his fatly tail between his chubby legs. Her ha! That to you, Robotnik!

Dr. Dr. Robotnik differs from most other doctors insofar as he is so thoroughly evil.

Robotnik is invulnerable inside the cockpit of his anti-Sonic machines, but should Sonic be able to bang on to his bulletless glass canopy he can inflict enough damage to discourage the rotund botter's reprehensible aliveness.

THE MAGIC OF TELEVISION

In true Sonic tradition, the landscape is littered with TV sets containing a familiar array of power-ups that boost the intrepid hedgehog's hedge-kicking powers. And they are:

Regular line shields protect Sonic from a single collision. They never come in wrong, you know.

A trail of sparkling stars shows Sonic has the short-foot ability to withstand deadly environments and destroy any foe he touches.

Red shields offer the same protection as the blue shields (i.e. one direct hit and they're gone) but they also allow Sonic to withstand fiery foes with ease.

Extra life bottles, quite rare, those. We had to play for ages before we found this one. And you'll never guess what they do. Well, you might. Or right, you definitely will.

The gold shields give Sonic the power of the float attack! Jump and hit the jump button again and he bounces in an nearby loop, enabling them into difficult! What a joy! What a hedgehog!

Often to be found floating high above honey springs, but Sonic often needs to fly a trail of flames at a wall to reach it - a lot of an advanced techniques in this game. So make sure you've extra credit.

SHOWCASE

Why if it isn't old Knuckles, Sonic'll have to fight these enemies to get to reach him.

See how Sonic avoids these places of (name) Try to be King of all Hedgehogs!

When he's not being hung along rollercoaster runways (let's) Sonic's walking on water - WOW!! What other fictional musical could accomplish such feats? Don't bother answering that!

FLICKY: "I COULDA BEEN A STAR!"

You don't have to believe it if you don't want to, but the fact of the matter is that the Flickies were once heroes of their own game! Yes, six! In 1984, Flicky came out - and indeed the Megadrive conversion which followed years later - cast the player as a small bird called Flicky who flapped around platformy levels avoiding chicks (of the bird variety) from ravenous cats. Sounds familiar, no? Yeh.

Obviously, in his old age, Flicky has been forced to join the ranks of the recurring in a co-starring role - a sad tale of a video game star who pushed to screen, let's hope this appearance heralds a Twinko-like trend in his fortunes. Roll on, Flicky Blast! **GD!** Kind of.

This might beat the parent parts, but our recollection is that Flicky was quite a jolly 'ole' on the Megadrive, and our brother reviewers rated the game quite highly for its single-minded fun-power. Ah, memories.

SONIC BLAST FROM THE PAST

Sonic's path This is twin-tailed looking) and Knuckles (a rock hard echidna or 'spiky sea urchin' if you must) are hiding out around Flicky Blast. If you can find them and give them 50 rings they transport Sonic to the bonus stages wherein in those all-important Chaos Emeralds without which Robotnik cannot be defeated and the game cannot be properly completed.

This part of the game will be familiar to any ex-Megadrive owner, as it's almost exactly the same as the bonus stage from Sonic 2, except it's all done out in real Gamma-shaded polygon graphics! You control Sonic as he legs it down a twisting 3D track grabbing the rings sprinkled along the floor and up the walls. To reach the Chaos Emerald at the end of the track he has to collect enough rings to make it through the checkpoints along the way but beware of spiky balls that block the track at certain points! If Sonic runs into one he drops his rings and has to start collecting all over again. Dashed!

The bonus stage was the only part of Sonic Blast 3D that was programmed by Sonic Team, and though the rest of the game looks cool, this looks REALLY cool!

MUSIC BY...

Sonic 3D features a total of 24 pieces of top quality music created by none other than Sega Europe's main music man, Richard Jacques, who produced the better tracks in the recently released Daytona CE (amongst other things). For Sonic 3D the man Jacques has out-done himself with a range of amazing music, ranging from dancey Sonic-style music through to more hardcore techno. It's all rather excellent stuff. What's more you get different music for every stage, changing slightly per act. There's even some great over-the-top duct-tapey music for Robotnik's entrance.

This time, Richard Jacques has produced the entire soundtrack, making for a far more cohesive sound throughout the entire game, as opposed to the clashing styles of music in Daytona CE. Hurray!

Press the game and a map of the act appears, started with the location of any completed flickies that might be roaming around.

Teasingly, Sonic sends the act's spots of flickies through the rotating ring and back to their own dimension.

Behold! Flicky Island in all its glory! Who but Sonic could make it to the top of Robotnik?

Working-twirlig-wirlig, Sonic prepares to flitlike some path-breaking pillars.

When Sonic has the golden shield he visits the power of the Blast Attack. Press the jump button once, and again, and Sonic bounces in on the nearest habitant and destroys it!

**TRAVELLER'S TALES**

Sonic 3D Blast wasn't entirely the work of the original Sonic Team. In fact the main game was programmed by Traveller's Tales, a developer better known for their Magdrite titles. If remember serves us correctly, Piggies' Puggery was one of theirs, as was Sega's more recent hit, Toy Story, and then of course there was the Megadrive version of Sonic 3D. So, let's hear it for those Traveller's Tales guys who have contributed so much to console entertainment and have such a fancy company logo!

Christmas NIGHTS™

into dreams...

FREE!! When you

subscribe to Sega Saturn Magazine.

Complete the form and send with payment to:

Sega Saturn, Subs Dept, Tower Publishing, Tower House, Sovereign Park, Lathkill Street, Market Harborough, Leicester LE16 9EF or if you wish to pay by CREDIT CARD call our SUBSCRIPTIONS HOTLINE on **01858 435350** between the hours of 9.30am - 5pm quoting source and offer codes.

Christmas NIGHTS is upon us and it's really rather excellent indeed. A whole four courses (plus obligatory boss) of yuletide festivities await along with over 20 "present" secret bits to discover, including the Saturn debut of Sonic the Hedgehog! You can't really afford to miss this! It's brilliant.

Twix

JUNIOR GAMESPLAYER OF THE YEAR

IN ASSOCIATION WITH EMAP IMAGES

THE RESULTS!

A few months ago in SSM, we teamed up with TWIX® and began our search to find the greatest NIGHTS player in the country. This culminated in an enormous challenge held at the Virgin Megastore in Oxford Street as we strove to find the TWIX® Junior Gamesplayer of the Year!

Remember our appeals to find the greatest Saturn gamer a few months ago in this very magazine? We asked our spin-talented readership to get to grips with NIGHTS and send in their highest Link score on the Frozen Bell area of this incredible game! Quite frankly we were delighted with responses over the next few weeks as Saturn gamers attempted to master this most competitive area of the game.

Out of the many entries received, only these eight brave gamers proved themselves worthy: Ben Bratchell from Surrey, Robert Doubtfire from Kent, Matthew Griffiths also of Kent, Robert Allsop from Derby, Marco Vito of Ruislip, Edward Lee of Warrington, Edward Hodge of London and Ben Whittington from Essex.

LET THE ACTION BEGIN!

The finals were held at the Virgin Megastore on Oxford Street on Saturday 2 November. As the starting time for the tournament drew close, the stars began to fill to bring with them eight onlookers. Hosting the event was Rick Henderson (from GamesMaster) and Chris Knight from Maxim software. The game set-up was simple: the challengers had to get as high a link as possible in two minutes.

THE EIGHT CHALLENGERS

BEN BRATCHELL: 42 LINK **ROBERT DOUBTFIRE: 52 LINK**
MATTHEW GRIFFITHS: 23 LINK **RICHARD ALLSOP: 21 LINK**
MARCO VITO: 31 LINK **EDWARD LEE: 57 LINK**
EDMUND HODGE: 15 LINK **BEN WHITTINGTON: 109 LINK**

A wonderful contest here, with Ben Whittington's frankly gargantuan 109 link way, way ahead of his opponents. But could he carry on the momentum in the final, where the four best players squared off?

Edward Lee poses with his accomplished NIGHTS skills as he begins the game of his life by finishing the first round with a fairly decent 57 link.

THE FINAL FOUR

BEN WHITTINGTON: 52 LINK **EDWARD LEE: 55 LINK**
ROBERT DOUBTFIRE: 98 LINK **BEN BRATCHELL: 52 LINK**

Taking a break after the first round and powering themselves up with a hearty TWIX®, the contestants sat down for the final, conventional (some pretty stellar) performances all-round, but Robert Doubtfire stroked to victory with a frankly unmissable 98 link! To the victor, the spoils!

Ben Whittington is questioned about his performance by Nicky Chris Knight.

Ben Bratchell appeals for more support as he takes the stand for the challenge.

WE HAVE A WINNER!

After a tense, but exciting contest, Robert Doubtfire emerged triumphant, winning himself every Sega Saturn game for the next year, a veritable mountain of TWIX® bars plus a celebratory medal for his efforts. He is the TWIX® Junior Gamesplayer of the Year!

The finalists also did pretty well, scooping up an array of TWIX® bars, a cool medal to impress their friends with, plus a goodie bag.

If you missed this event, you missed a most excellent, enjoyable occasion. Next year, there could well be something very similar going on, so why not "Take a break from the norm" and ready yourself for the next TWIX® Junior Gamesplayer of the Year challenge!

Robert Doubtfire - the official TWIX® Junior Gamesplayer of the year is interviewed for media after he won the final NIGHTS challenge!

'A BREAK FROM THE NORM'

VIRTUAL ON

So... Fighting Vipers, Virtua Cop 2 and Daytona CCE aren't good enough for you eh? Well, try this all-new AM3 arcade conversion of the excellent two-player battler, Virtual On.

BY	SEGA
PRICE	£70A
STYLE	ROBOT FIGHTING
RELEASE	DECEMBER

DUAL PLAYER ACTION

Virtual On was originally designed as a two-player game in the arcades. Indeed, it's **ONLY** a two-player game and as such it's a pretty expensive coin-up and thus only found in big arcades. That being the case, it has to be said that the Saturn version really is the best when played against a human opponent. There's very little more satisfying than using skill and strategy to totally outpace, outgun and brutally outdo your opponent in every single way. It's more of an enclosed one-on-one arcade feel than say, Doom or Quake, but it's very, very cool. And strategic too - hence a 200+ page play guide available in Japan.

The robots supply some mind-blowingly amazing action sequences, replaying the final destructive moments of the round in spectacular fashion.

Look out for an in-depth Virtual On play guide next!

Virtual On is the **deepest, most strategic** two-player game to hit Saturn since the **legendary Virtua Fighter 2**. High praise indeed.

The Japanese are well known for their cultural tastes which are... well, a bit "different" to what us westerners are used to. For a start there's anime movies, a penchant for semi-naked adolescents, sushi and TV programmes where two men in rubber dinosaur suits battle it out. What is perhaps more up our alley is the concept of huge, armoured battle robots duking it out in deserted areas for no particular reason. And it is upon this premise that Sega's R&D Dept. 83 bring us (see farewell) Virtual On!

That might seem to be a pretty lame scenario on which to base a videogame, but in Virtual On's case, this is actually some thing of a good move. Keep the concept simple, but introduce tons of gameplay concepts and ideas to give the game some depth.

Take the hunter-killer aspects of Doom, mix and match with some Street Fighter and CyberLid and you have Virtual On - deceptively simple, but very deep and extremely exciting.

A choice of eight robots is initially at your disposal (the roster is boosted once the secrets have been activated) and each has a different range of weaponry, along with differing speed and agility. Each combatant is armed with a plasma sword for

The Roadster City is the most open arena in the game.

In a word: conditional.

In another word: brilliant.

This isn't Fai-Sai. She's fat, ugly and a real pain in the ass to play against.

The two-player mode is absolutely amazing especially with the vertical split-screen.

devastating close range combat [these are by far the most powerful weapons and are favored by the faster robots] along with three different range weapons. Typically one is mounted per arm, with a "mega attack" activated by using both weapons simultaneously. Each robot also has booster capabilities with which to speed around along with the useful jump feature which allows you to leap high into the air and scope your opponent out there.

The sheer scope in each of the robots' capabilities allows for some action which tests the old gray matter as well as the arcade reflexes. And that's really where Virtua On comes into its own. Each combatant has an Achilles Heel which must be ruthlessly exploited in order to be successful. The thing is, your opponent's vulnerabilities are often exposed just as they're firing off their most devastating attack!

It's a bit difficult to describe just why Virtua On works so well. It's clear that AM3 have spent a great deal of time getting the game logic just right for the arcade version and this has been converted

Kahn: Impassible!

Boston: Shies out the power!

Play this level so you'll defeat Cover CD (No sweat)

over to the Saturn extremely well. In fact, as arcade translations go, it's really difficult to fault this game. It may not have quite the resolution or fluidity of the arcade game and some of the configurations aren't quite as impressive, but the fact is that they're good enough. Coupled with the gameplay, it makes Virtua On an essential Saturn experience.

Virtua On might look a bit weird, but it's just broken. There's always room in the market for a new, excellent two-player game and this title hits the spot perfectly. Basically, yet another superb reason to buy a Saturn. The AM3 departments have done it again.

RICH LEADBETTER

There's absolutely no loss of detail or speed in the two-player mode.

Kahn can be used to absorb your enemy's beam weapons.

AM3 CAN DO NO WRONG!

You can't beat a bit of AM3 arcade gameplay can you? After the brilliance of Sega Rally Championship and now Virtua On, we've come to expect only the very best from this prolific developer and their pals in the SE game development department. The next title to issue forth from the same stable is Last Bronx. It's a 3D fighting game that uses the same GUARD-PUNCH-KICK controls as Virtua Fighter but features completely different gameplay, most notably in that the characters use weaponry. It's just been announced that Last Bronx will be one of the most important Saturn titles coming out way in 1997. Check News for first Saturn shorts!

You have to know what you're doing to get the most from V-On.

Fai-Sai's Upper Heart Beam.

It's for the girls. She's a hero.

Yet another super-successful arcade translation from the masters. An excellent robot-battling title more than deserving of a place in your hall-of-fame software collection.

BLAST CHAMBER

Ask any spectator at a municipal fireworks display and they'll tell you that nothing beats a good bang. But if that's the case, how come this explosion-based game isn't more fun?

BY	ACTIVISION
PRICE	£44.99
STYLE	FUTURE SPORTS
RELEASE	DECEMBER

What endless prizes could encourage grown men to go bang?

Remember kids, never take the back door into a crystal room

Yes, yellow player, read that like this too! You are, but you have only 20 seconds left before the bomb strapped to your body blasts you into six million pieces! Ar-har-har-har!

It takes a certain sort of person to enjoy a futuristic sport set inside a glass rotating cube, and Activision have set out to corner this particular sector of the market with the mighty Blast Chambers. Well, I say 'mighty', but that's only because it sounds good. In fact, 'mighty' isn't the most appropriate adjective to use in connection with this game, but before we get on to that, let's find out what this game has to offer the everyday gamer/player in the street.

Blast Chamber is a game that can be played two ways as a sort of every man for himself future sport and as a puzzle game. In the first variation you find yourself trapped in a cuboidal chamber with three other 'blokes' (computer or - by the power of multi-tap - human-controlled). All four contenders are dressed in coloured uniforms with time bombs strapped to their backs. All four contenders also have their own timers which when they count down to zero detonate the bomb and blast the weaker into shrapnel fragments.

There is only one way to save yourself from becoming a firework. A glowing crystal appears in the

middle of the floor and you have to try to grab it, shoving your opponents to the deck if they get in your way. With the crystal in your possession you have two choices. You can either slam it into your own base, thus adding 25 seconds to your timer, or bang your opponents 20 seconds closer to detonation by dropping it into one of their bases.

Complicating things somewhat is the fact that the bases are all situated around the walls and the ceiling of the chamber so they're not readily reachable to our govtly-bound gladiators. The only way to get to them is to walk into one of the green arrows in the corner of the chamber and thus spin the whole room through 90 degrees. This also sends your opponents tumbling, and if one of them has possession of the crystal when the chamber twists, he drops it and you get your chance to claim it.

If you're playing the tournament mode the explosions are reintegrated almost immediately after detonation, and at the end of a time limit, whoever has gone bang the least is declared the winner. If you're playing elimination though, there are no sec-

A most original future sport indeed, but does Blast Chamber succeed in the all-important gameplay department?

Wilko's reputation for pure evil is reinforced when he shoves the crystal in the red base, reducing Red's lifespan to 30 seconds!

Big in several walking ways!

Filled by a Swedish pacist, the red player literally goes pop!

INSIDE THE BOOM-BOX

Having to run around inside a crosswiring steel cube, looking for a glowing power crystal isn't a situation that a normal middle-class upbringing prepares you for, so here's a little visual "walkthrough" to show you just how to

cope if you ever find yourself in such circumstances. What we're looking at here, is the first of Blast Chamber's puzzle levels, in which you have to get that crystal down from the ceiling and over to the flashing red base.

There's the crystal up on that ledge... but how to get there?

The chamber rotates and the crystal drops to the "floor"

Crystal acquired! Now you kick things the base within reach!

Open the room and watch those hair tangles!

Good job I got that Day Extension for Christmas.

Power! What smelt? Such green gaffery indicates imminent invasion for one of our doomed competitors!

and chances and the game keeps going until there's only one player left.

This may well sound thrilling in an old-fashioned simple-minded, SpeedBall kind of way, but whereas SpeedBall was entertaining and required some degree of skill, the gameplay here is more free-form and shambolic. The problem really lies in the wacky spikes which, when they come together in a bundle, suddenly become indistinguishable and unmanageable. You can shove away at your opponents and sometimes it seems to work and sometimes it doesn't. They fall! They speed! But who has the ball? Or crystal, even? It's so hard to tell! Bah, this bit is no fun.

Seeing Blast Chamber from total embarrassment, though, is the second game variation. Here you find yourself alone in a chamber full of platforms, stairs, spikes and elevators. Hidden in some out-of-the-way, hard-to-reach place there's a crystal, and it's up to you to work out how to claim it then get it back to your base before that really bomb-lusty hit ends! These levels start out easy but they soon get very tricky indeed and after a few rounds you need to work out complex routes across perilous arrays of traps, disappearing bridges and bouncing boxes. Power-up pods also appear to boost your jumping ability or time limit so you also need to work how best to use these to complete the level.

Clever though this part of the game is, it too is dogged by problems. Blast Chamber's controls are a touch too vague to give the precise, against-the-clock manoeuvring required for a time-limited, platform-puzzle game. Also the 3D viewpoint doesn't always give an accurate indication of where you are in the cube so you sometimes find yourself awaiting precious seconds jumping at platforms that aren't where you

Beautiful, but deadly - the certain species of Impaled Fish. At the least they kill by they grow over fences... and ever more difficult to wheel!

thought they were. On several occasions I was pushing at the arrows on the walls trying to rotate the chamber but with no effect - until I nudged my little guy couple of pixels to the left or right. How annoying.

I can imagine Blast Chamber's designers believing they had come up with a great game idea that made a clever and unusual use of the Saturn's 3D graphics hardware. In principle it is a good idea - or at least the puzzle part of the game is - but all the smart thinking has been undermined by some dodgy execution. With a bit more play testing and tweaking this could have been respectable, but as it stands Blast Chamber is a damp squib.

PAUL GLANCEY

Our hero helps the Bazaar-Jawed PC of Death Plasma...

And finally he stuffs the crystal into the base! Hurray!

Not as much a bang as a whimper: The puzzle section is the strongest part of Blast Chamber, but even that fails to provide explosive entertainment.

NHL HOCKEY '97

Electronic Arts initiate their barrage of sports titles on the Saturn - here's a conversion of one of their most respected of Megadrive titles... And it's all in 3D!

BY	EA
PRICE	£39.99
STYLE	HOCKEY
RELEASE	OCT NOV

WHAT THE PUCK???

Upon loading NHL Hockey '97 you are immediately bewildered with a vast array of options to wade through after an inordinate full-motion video intro. The final order of business is to choose exactly what kind of game you want to play. NHL has it all - an entire season (which you can save off to memory and resume later), play-offs and shoot-out contests. Pretty impressive stuff! You can even engage in a bit of gambling as the volatile player transfer market or create your own players.

The 3D update is very smooth indeed.

The intelligent camera views make the whole thing gel together very well.

The players close in for the first face-off.

I remember when EA Hockey first arrived on the Megadrive, way back in the early days of my reviewing career. It was a revelation. First, someone had been able to incorporate the speed, skill and rampant violence of Ice Hockey into a Megadrive game. Coming from the home of John Madden Football, it's not surprising that it was brilliant.

After numerous sequels (most of which weren't as good as the original), EA have moved onto the joint systems and this whole sequel business looks set to begin again. Still, since this is the first Saturn version we can at least benefit from an all-new game engine.

In this regard as well, NHL Hockey is pretty damn good actually. EA have managed to upgrade their Virtual Stadium technology from last year's FIFA title and have created a believable 3D environment that actually moves fairly smoothly and at an acceptable speed. This is essential for such a high velocity sport.

The control system is very similar indeed to the original EA Hockey on Megadrive - which isn't too shabby.

It's a shot as goal.

An overhead view of the face-off.

And it's a goal just after six minutes of ice hockey actual.

as Hockey, so at least the basics are there for a game that imposes on the realism and enjoyment of the original 16-bit games.

Being EA Sports there's the usual presentation guff - a whole bunch of full-motion video sequences designed to lead you into the game and enhance the atmosphere. The quality here is adequate, but since as UK gamers don't really give that much of a toss about this flippery and more often than not, the START button is used to get us straight into the action. More useful presentation takes the form of the usual super and EA Sports options and stats. EA are notorious for

A great deal of camera views are on offer, as you have come to expect from EA Sports titles. The default view is best though (as is pretty much always the case).

There are some nice reflection effects on the edge of the rink.

The "nearest camera" provides a pretty wacky experience, but you get to see the sheer detail on the ice.

This is a goal celebration after a hit.

Just after the face-off the camera zooms out for the best view shot on goal.

Watch something about on the defensive as the nets need a full-on strike from the opening team.

I think you've got the idea...

...But here are some more...

...pictures any way. Um.

The EA Sports **Virtual Stadium** technology provides a fast and smooth 3D environment.

being super-precise in terms of beams, names and game variations and Ice Hockey nuts are unlikely to feel really let down here.

The thing is, here in the UK, we're more concerned about gameplay over and above the stats and what have you. And in this regard, NHL Hockey works pretty well. The feeling of skating over the ice is just as good as the Megadrive original and the control method is pretty much the same. That makes it very easy to get into for people who've played the original.

The bottom line is, does NHL really warrant purchase? A distinct line is, does NHL really warrant purchase? A distinct line is, does NHL really warrant purchase? A distinct line is, does NHL really warrant purchase? A distinct line is, does NHL really warrant purchase?

RICH LEADBETTER

As if you hadn't guessed, here I draw the sword.

Surly not a face-off?

Well, yes actually.

TO THE GAME PROPER

Just when you think the options tray is over (in that you've pressed START to get past the first range of selectable), more of the buggers appear on-screen for your perusal. These are the actual in-game options, incorporating things like time duration, auto goalies (on/off), fighting (again on/off) and three skill levels. There's even a presentation sub-menu here within which you can change sound levels, get rid of the FMV, silence the crowd, that kind of thing. Good eh? Well, no, it's a bit much really. But some people like all this.

A fine triumph of ice for hockey simulation, graphically impressive and pretty playable, holds well for the future of EA Sports.

COMMAND & CONQUER

Don't be fooled by the simplistic graphics. This game is one of the all-time greats - a classic release right up there with the very best of Saturn titles. Command and Conquer is a revelation.

BY	VIRGEN/WESTWOOD
PRICE	£24.95
STYLE	STRATEGY
RELEASE	DECEMBER

IT'S A BIT LIKE...

When I first sat down to play Command and Conquer, I thought that being a strategy game it would take ages to get into. Not so. In actual fact the game bears an incredible resemblance to another Westwood title, Dune 2: Battle for Arrakis. That's no bad thing, because that game was one of the most accessible and enjoyable titles ever released for the 16-bit machine. C&C is much the same, but with a greater range of tasks and missions, along with far superior presentation - as befits a 32-bit machine like the Saturn.

Select to exit as the GDI and you're immediately thrown into the thick of the action. Troops arrive via sea and it's your job to see them to exterminated GDI terrorists over to the left. That last leaves a sweet sweet...

Command and Conquer is one of those game concepts that defies technology, to be perfectly frank, an almost identical version of this game with all of the FMV and what-have-you could probably be done on the Mega-CD. The graphics are small and well-animated, but nothing spectacular and apart from some decent audio CD tracks, the sound is well below average. So why is Command and Conquer worthy of a score that puts it up there with AM's finest games?

It's simple. Command and Conquer thrives on deceptively simple gameplay. You can achieve so much with so little effort it becomes a joy to play. The point

and click interface is exceptionally easy to use - even with a joystick. Taking control of entire battalions and setting up individual commands for individual soldiers is as easy as missing a crack attack force and sending them off to crush the enemy once and for all.

This is all made even easier by the inclusion of some excellent artificial intelligence. If your soldiers are attacked and you're busy elsewhere, your troops think for themselves, retreating or running depending on their strength. That self same AI is also responsible for some excellent and involving battles with the CPU.

The FMV builds up the story really well indeed.

Some more lovely activities via the wonders of FMV.

The FMV is a bit grainy compared to the likes of Virtua 46 but Gee D'Arco.

But these sequences are all about advancing the story. Which they do extremely well.

A raging collection of buildings put together as a NOD base as one of the earlier levels. Get two refiners to maximize liberian barrels.

Every level the map is updated to show territorial occupations.

Barracks under attack!

Being a standing army.

Controlled looting from the FMV intro (two pictures shown).

Useful! 94%, Efficiency 70% - that's not all right.

IT'S ON TWO CDS!

For a game that's as visually single as *Command and Conquer* is, it's a tad surprising that the whole shebang is spread over TWO CDS! But why? Well, being a supreme strategy title, C&C allows you to become either of the two major sides in the conflict, each with their own missions and full-motion video. Because there's so much of the damn FMV, two discs are required. The good thing is that since both discs are essentially different games there's never any disc-switching. Instead, you just choose which side you want to be when you choose your CD. Easy. And indeed easy.

A simple game yet utterly absorbing, *Command and Conquer* is simply a massively addictive videogame.

A nice small base from an early GDI level.

Action with the NOD guys.

A very busy controlled base here in the left. To let let.

A nice bit of FMV here.

It's the GDI base construction going on here.

CONSTRUCTION TIME AGAIN

One of the reasons why *Command and Conquer* is so ace is because as well as the fighting elements, there is also a kind of Sim City style bit to it. On most of the levels, your task is to build up a base of operations and use it to create traps and harvest the surrounding area of value minerals. Good base construction and prioritising which hits to add to it at what times are the marks of a good C&C player.

It might not look like much from the screenshots, but take it from us: *Command and Conquer* is an easy-to-get-into, utterly compelling and extremely absorbing game. One which you should buy immediately.

controlled enemy forces. The Saturn-led forces are no push-over, there are missions which you'll spend days at a time getting a handle on. And that's the other joy with *Command and Conquer*: *Westwood* have obviously a huge amount of time doing every aspect of the missions in the game - even the early, simpler assignments are classy whilst the latter tasks are masterpieces of gaming design. That's something extremely rare to behold on a videogame created outside of Japan these days.

There is very little to complain about with the game - at the time out on this page states, you even get to choose your side with each having their own range of tanks - adding still further

to what it already a supremely listable game. In fact the only slight mean I have apart from the grating sound effects which do become excessively irritating is the unfortunate omission of the PC version's multiplayer mode. A link up option or NetLink facility would have firmly put this well up in the leagues of *NIGHTS* and *Virtua Fighter* as an ultimate software which MUST be owned. As it is, even without it, *Command and Conquer* isn't far off the walls of excellence. Which certainly isn't bad for a game you could do on the Mega-CD.

SEGA AGES

Sega's latest arcade conversions finally hit home! So what do we have? Virtua Fighter 3? GunBlade NY? Last Bronx perhaps? No. Try timewarping back into the last decade and checking out the delights of Space Harrier, Afterburner and OutRun!

BY	SEGA
PRICE	£19.99
STYLE	RETRO
RELEASE	DECEMBER

SPACE HARRIER

Released in 1985, Space Harrier revolutionised arcade graphics. With its distinctive chequerboard landscapes and incredible (for the time) scaling sprites, this game was the ultimate coin-op - enhanced by a brilliant hydraulic cabinet keyed to the responses of the joystick. In this regard, Space Harrier set the precedent for brilliant arcade cabinets. A simple blast by today's standards, but in its time Space Harrier was cutting edge technology - the Virtua Fighters of the mid-eighties, if you will.

On Saturn, you get a virtually identical conversion. Everything is preserved and control including resolution, speed and playability. A cerebral conversion of a game still strongly compelling despite the ancient gameplay.

Afterburner was designed to be the ultimate in arcade excitement when it was first released.

Sega have led the arcade field since the days of Frogger and Turbo, two space-making videogames. However, the company's prolific R&D arcade departments really came to the fore with the development of sprite-scaling technology which allowed for some of the most amazing "3D" graphics ever seen.

Whilst opposing companies were still shovelling out scrolling shooters and platform titles, Sega took the game to the next level, totally outquaffing every thing everyone else was doing at the time. Just as they are now with the new Model 3 technology.

The Sega Ages pack (volume one) takes three of the most popular arcade games of a lifetime and shoves them onto one CD. What you get for your forty quid are virtually arcade perfect representations of Space Harrier, Afterburner and OutRun.

The former two games have been converted pretty well to Megadrive and 32X in the past, and in such, really don't merit so much attention. Suffice to say that Space Harrier is totally arcade-perfect, still playable and still worth a blast. Afterburner is just short of arcade perfect, but again it's uncannily similar to the original. Like the coin-op, there's little depth.

In their day, these games were the equivalent to V3 in terms of technical innovation. And they were produced by AM2 as well!

Afterburner was Sega's finest hour before Virtua Racing.

OutRun sees the renaissance of the excellent arcade music.

Just like the original!

Multiple routes through here.

The barren canyon striding run from Afterburner.

A plane from OutRun catches the F-14's attention. Bang.

Engaging the enigmatic afterburners.

Reload and get more modes.

There's a bit of an art to flying, looking every mile in Afterburner, particularly in later stages.

Of the three games, **OutRun still shines** as an excellent game, with **Space Harrier** and **Afterburner** providing the extra value.

but the adrenal'n rush is still there. Afterburner was always been a favourite of mine, and it still is. Suffice to say, when the Japanese import turned up a couple of months ago, it imperiously "ranked".

But OutRun eh? Everyone old enough to remember the 1980 classic has fond memories of this brilliant game, and it's great to see that the game still holds its own. Sure, it's no Sega Rally, but the game still has legions of fans and this Saturn version is the closest version EVER. And it's about time.

Like the Bubble Bobble pack I reviewed a couple of months ago, it's clear that this won't be everyone's

cup of tea. These aren't the games you bought your Saturn to play. However there's something about these old games that I love, and you do get your value here (in Japan, the games were sold separately, believe it or not so European gamers actually benefit for a change). The bottom line is, these bygone classics are still pretty nice games and if you're a longtime arcade player, you're going to love this - hence my personal recommendation, which the pack would have got for OutRun alone!

RICH LEADBETTER

Space Harrier strikes!

The first Space Harrier boss.

Space Harrier redefined the arcade experience when it was released in 1984 - its contemporaries were 2D, gradually superseded and 1986's Sega led started a revolution.

OUTRUN

Recognised as being the most successful coin-op of the eighties, OutRun took the Space Harrier "Super Scaler" technology and adapted it for use in a driving game. Not surprisingly, the graphics amazed all who saw them, but the real innovation was in the soundtrack, which was based on Yu Suzuki's desire to get studio-quality music into videogames.

Innovation in the gameplay (such as decent power drift and opposing cars travelling at different speeds) coupled with sheer atmosphere made OutRun a deserved classic.

The Saturn version is as close to arcade perfect as you would expect and like all of the Sega Ages games, it's all loaded at once, so no CD access! Hurrah.

AFTERBURNER

In celebrating the integration of arcade-gore, Sega turned their eye to Hollywood and used the Super Scaler technology to basically bring Top Gun to the arcades. The most adrenaline-packed game of the time, Afterburner was again an audio-visual feast combined with what was the ultimate hydraulic cabinet of the time. Limited in terms of gameplay.

Afterburner was still an enormous hit and it still just damn exciting to play.

The Saturn conversion is probably the best faithful on the Sega Ages pack, with some resolution lacking, but the audio-visual hits are still there.

If you like your retro, you can't go far wrong with this. Space Harrier and Afterburner are fairly cool - OutRun is still brilliant. All three of them on one CD makes this a great purchase.

MIGHTY HITS

The Virtua Gun renaissance continues. As if Virtua Cop 2 wasn't enough, Sega have seen fit to support its plastic sharp-shooter with **Mighty Hits**, an intriguing collection of games that may well make your head hurt.

BY	SEGA
PRICE	£29.99
STYLE	SHOOTING
RELEASE	RECORDED

A less stranger rides into town on his cosmic steed...

...and breaks the joint. John Wayne eat your heart out!

TOY TRAINS

One of the hardest games in **Mighty Hits** *Trains* plunge in and out of four tunnels and you have to shoot the blue cars whilst avoiding the red ones.

It's not as easy as it sounds and I've never got this one right... **News:** Not that I'm easy at games or anything.

PORTRAITS

Since the preview, we've got this one cussed about at the falling pictures to rack up points, but if you hit one with a red frame you lose a point. Since there aren't many red ones, just shoot the lot and you'll win anyway.

PENGUIN

There's a Penguin trapped in the ice. Blast at the ice to set him free, but each hit causes the ice floe he's sitting on to spin around, meaning careful timing needs to be employed to succeed. A simple, but tricky game.

So far, every Saturn gun game has relied on the same half-guy-shoot-'em-up, into-the-screen-scrollin' formula that made the original Virtua Cop so damned funny, but **Mighty Hits** takes a refreshingly new approach instead of just offering relentless blasting action. **Mighty Hits** contains twenty sub-games which offer relentless blasting action. Admittedly some of them are slightly more cerebral, but the blasting bit remains a central theme. This is a Good Thing, because otherwise it would make for a pretty pointless Virtua Gun game. And we wouldn't want that.

The sub-games are a disparate bunch, as you can see from the box arts, so a scenario of sorts is provided to tie it all together. As the game originates from Japan, you can expect weirdness, but in **Mighty Hits** the programmers have outdone themselves. Coming on like an LSD-fuelled Western, the intro shows assorted cartoon characters in the midst of a saloon brawl. The hold-up is halted as the cart literally goes to pieces and the bar collapses on top of them. **Mid.**

The characters in the intro also serve to guide you through the game, by giving instructions on each game and then cussing as you foul it up horribly. **A-**

Clearly a bright, vibrant piece of software with some nice 3D but is **Mighty Hits** worth any more than a cursory investigation?

The 'Landing' final stage.

How easy those falling cards.

This is slowly being held.

The knights wait as you hit the hallway. It's really, they do.

Destroy pictures frames. Be there's in interview.

One of these frame matters is a different piece each time the screen updates. But I can't remember which one. **Dang.**

You have to shoot the best ones. If you can see it.

It's very crap at this.

Easy. Just like in the movies.

You never get the one you want, never.

Shoot the Jack-in-the-Boxes. None so merry kill. Main.

FACE PUZZLE

A lot like a Rabbit's rule, we suppose. Revolve the size blocks by shooting at them to reveal the face of one of the game's comedy characters. And repeat. Wait for this to appear on a Game Master Celebrity Challenge.

TOYS

Shoot the wacky-toy part of the toy population obey as you have to write the part of each toy that obviously doesn't fit in. Like the frog with extra robot legs. Ugh, scary.

CLOCKS

Quite tricky. These pocket watches are swinging backwards and forwards like pendulums. You have just the one bullet to nail all three clocks at once. You will fail, you will.

BOTTLES

You have just eight seconds to complete this one. Some fancy shooting required? Actually no, just wait for the top to fly off one of the five bottles, then shoot the corresponding bottle. And that's it. D'oh.

The deluge of gun games continues with the arrival of Mighty Hits! But does this match up to the brilliance of the Virtua Cop games?

Shoot the balloons to lead the little fella on the raft. Or just dash him in the brain.

the start of each round you select three stages by shooting at cards that rapidly flip through the available games. As the level of difficulty increases, so do the time limits and number of points required, until you reach a point where it's almost impossible to succeed. Get through to the end and you get to play the previous final stage, which involves a ball and eight seconds to shoot it to pieces. No missiles or tanks, or anything: just the ball.

Mighty Hits is a decent enough idea, but when it comes down to it, it's just not all that fun. Sure the attraction of something different for the Virtua Gun holds your interest for five minutes, but once you've played all the games and pulled your hair out at the ridiculous time limits there's not much incentive to keep playing. The only slight redemption is the two player versus mode, but even that isn't a bundle of laughs, and two player hi jinks are best left to proper puzzle games like *But-A-Move 2*. It's not terrible, but it is pretty much pointless. Rather looking in the post department, actually.

STEPHEN FULLJAMES

Shoot the balls the alien is juggling to change their color. Sadly you can't just shoot the cores.

It's cheap, it's weird, it's different and it's not as if it's fatally flawed or anything. It's just that Mighty Hits starts to drag pretty quickly and if you don't possess a Virtua Gun it is spectacularly without point.

TETRIS PLUS

It's Tetris, that simple-yet-brilliant block-arranging puzzle game. What more can we possibly tell you? Y'know, Tetris, that game that everyone can whistle the music to. It's Tetris for chissakes. Read on.

RAIDERS OF THE LOST CAR PARK

Our intrepid puzzle mode explorers are dead set on discovering the world's greatest lost treasures, whether the treasures want it or not. As you can see from this intro sequence, it sets things up marvelously for each game, but strangely enough it's the same plot wherever in the world the archeologically minded duo are. It's a funny old world, isn't it?

This is Tetris Plus, with wily professor advice.

After years of being confined to the tiny, plastic shell of the Gameboy, Tetris has finally broken free and legged it to the relative comfort of the Saturn. But what can the dual processors and other fancy whizbang of Sega's 32-bit beast do for a game that is, in essence, just a few blocks moving down the screen? To be quite honest, not that much. Unless you take a radically different approach, like the recent Super NES Tetris Attack, Tetris will always just be, well, Tetris. But having said that, there are an assortment of play modes to keep you occupied through those long winter nights.

For starters there's Classic mode, which is your big standard cinema or garden Tetris. Fit the falling blocks together to make lines. The more lines you get at once, the more points you score. As you get more lines the action gradually speeds up until eventually you're playing at a frantic pace. If the blocks reach the top of the screen, it's game-over. Although it is possible to have two player games in this mode, your actions do not affect the state of your opponent's own box, which is a bit stupid really. There is a full blown

Here the left professor dies a slow, lingering death.

This here's the puzzle mode, Tetris Plus allows you to create your own puzzles too, although if there isn't anybody else around to solve them it's a bit pointless.

Two player mode, but more on that later.

Next up we have the Puzzle mode, which has probably been included in an effort to keep up with the times, or in this case, the Best a Move series. This mode introduces a cartoon professor and his assistant. They are exploring archeological sites around the world, but every time they seem to come up against a fiendish puzzle based on lots of falling blocks in a wacky arrangement. Criminally it sounds just like Tetris. The basic object of these games is to rescue the Prof by clearing a stage with a preset arrangement of blocks. As you drop more blocks, the Professor climbs up the top of them, and to plot up the proceedings, a whirling blade of death slowly descends into the stage, minding blocks and most explorers alike. Should the Prof get pawed, it's game over again.

The two player mode is based on the puzzle mode in that it uses the same type of playfield with the Professor, whirling blade of doom, and preset collections of blocks. This time, however, each line you make causes more blocks to appear on your opponent's side. So if you get a Tetris, expect howls of der-

The greatest puzzle game of the Nineties arrives on Saturn...
But was it really worth the time and effort?

Works on the Saturns eh? It's not a bad idea but...

Just 4- Move 2 and Block Take are more enjoyable.

Here's the full range of options and stuff in Tetris Plus.

Classic Tetris came back!

So dear oh dear.

This is more like it. Tetris as it SHOULD be played.

tion from the other player as his or her Prof gets rapidly shaved bladeside. The thing is, two player game never last too long, because of a combination of the larger blocks used in the puzzle mode and the descending blades. This means that if you're after a down-out tactical battle, you'll be disappointed.

But there's yet more! Tetris Plus also contains an edit mode, where you can create your own fiendish puzzle stages with which to infatuate yourself and friends alike. You can store up to ten of these home-made stages in the Saturn's memory at one time, and you can specify every possible parameter, from the position and colour of the blocks, to the starting position of the Prof and the whirling blades of death that inevitably form his untimely demise.

So on the face of it, it would seem that Tetris Plus offers everything a puzzle fiend could possibly desire. But in reality, it's not quite as peachy. Somehow a game that was fast and playable on the Gameboy is slightly jerky on the Saturn. It's only a smidgen of jerkiness, but it's enough to put you off, and the 'lag' between a block hitting bottom and checking there is a little too long, so you often end up shifting it left or

Tetris Plus is well-presented and playable but it's just perhaps a bit too long in the tooth for Saturn owners.

Tetris Plus introduces an interesting spin to the old game.

right when you really meant to be moving the next block. Then there's the puzzle mode, which is a nice idea, but is slightly less than great for the same reasons. And a couple more. The blocks used in the mode are quite a lot bigger than in Classic Mode, so obviously less of them fit on the screen and games don't last as long. Then there's the Professor/Blades of Death double act which starts to get on your nerves pretty quickly. As the blade falls, it destroys any blocks in its way, meaning that you can never foul up by reaching the top of the well. The Professor always climbs up the tallest pile of blocks, as if he wants to get get worried, and as you have no control over his actions, you often feel a bit cheated.

The game also looks basic, and while flashy graphical effects are not really a prerequisite for puzzle games, it's simply not as pretty as Best-a-Move 2. The Professor and his swords are cute but flimsy, and the whole impression you get looking at the game is that it's simply "okay" and certainly nothing to get excited about.

STEPHEN FULLJAMES

... Tetris Classic is still the preferred game in our opinion.

Tetris Plus makes a good stab at being a modern puzzle game, but with the irritating faults mentioned above and far superior competition in the form of Best-a-Move 2 it's a bit redundant.

This here's the Best-a-Move 2 another addition to the basic Tetris game. And not a particularly interesting one if I'm truth be told.

BREAKPOINT

Sports sims of all descriptions are now flooding the Saturn market... except Tennis ones that this. As you can see from this page, Ocean have seen fit to rectify this matter in a major way...

BT	OCEAN
PRICE	£7.99
STYLE	GUESS
RELEASE	OUT NOW

DOUBLE YOUR FUN

Being a pretty proficient Tennis simulation, Breakpoint caters for just about every Tennis eventuality, but screaming at the Umpire for a bad decision (because unfortunately these aren't any!) Top of the list is the inclusion of doubles. Now you might imagine that twice the amount of motion captured players strutting their stuff would slow the game down. Not so. The game engine works extremely well despite nearly doubling the amount of textured polygons. Not bad...

Level camera views in the game. And the intro...

It's about time really, but finally the Saturn has a decent Tennis simulation. Unlike the horrible Acclaim effort Virtual Tennis (which I'm not even sure was released over here in the end), Ocean's Breakpoint is actually a fun, manoeuvrable and playable rendition of the sport: it's a shame it wasn't timed to be released with Wimbledon, but hey - who cares if the game's any good. Which Breakpoint is.

The basic deal is that it's one of those simulation type affairs. The whole game is in full 3D with textured polygons being used to create a very realistic Tennis court, and motion capture employed to animate the players. Just about every shot you can imagine has been recorded and included in the game - forehand, backhand, volleys, lobs - you name it (just don't name cross court volleys though - more on that later). The overall effect is most impressive. Perhaps the movement is a bit an

slow on the action's just a bit too slow to successfully simulate a fast sport like Tennis.

the slow side, but this is just about the only thing to distinguish this from the real thing.

Being a sports simulation, I bet you're just waiting to be deluged by a flurry of options with which to tweak the gameplay. Well Breakpoint is refreshingly sparse in this regard (there's no "change the colour of the umpire's facial hair" frippery) with a decent range of different tournaments, courts, and of course singles and doubles action. Even the range of camera angles is kept to a minimum. Which is a good thing - there's no completely useless US Spg Satellite view for instance. What you get are views which let you see what's going on.

Criticism? Well, unfortunately, Breakpoint is a game that's not without its bad points. For starters, the sound is a bit caddy - a disorientated Stephen Hawking soundlike stands in for the umpire, providing really quite poor scores (a real umpire from the Lawn Tennis

As you might have gathered, this is a clay court, which makes for some high bounces.

The action's just a bit too slow to successfully simulate a fast sport like Tennis.

Here's some indoor action. With a ball-hey...

A close-up view of some walking about.

Just like Virtua Fighter I.

Court Selection seems okay!

Some basic tennisistry.

Looking out of the ball.

A lot of doubles for Sats!

The camera angle's quite weird in the one-player game.

COME TO COURTS

A vast array of different courts are an offer for you to play on, each with a different range of interesting background scenery. As you might imagine, the surfaces of each provide different dynamics for the tennis play. For example, a clay court is bound to have better bounce than the Wimbledon-style grassy

...The next generation visuals look pretty cool, but playability is a step back from the best of 16-bit.

Frame spikes is smooth, even with doubles.

The courts are pretty detailed too which is a good thing.

Association would have been great, the crowd ate surprisingly muted and some commentary wouldn't have gone awry (Bery Divers, Jo Darle Virginia Wade - joyfully - would have been good).

Also, from a playability standpoint, Breakpoint suffers in that the motion capture is given precedence over controllability. A real tennis player can start a shot, realise they've made a mistake and adapt. Not so in Breakpoint. This takes a lot of the spontaneity and action out of a sport that thrives on it. It also takes some of the pace out of it - again, an aspect that makes the sport so interesting to watch. I also had trouble with the control method. Yes, just about all the shots appeared to be present and correct, but directing where your shot's going is just not as intuitive as it should be. That being the

case, there's not really any such thing as a cross-court volley - a staple of the actual sport. Wrong footing your opponent is an exceptionally difficult task, resulting in a series of boring "ping pong" play that ends when one of you forgets to press your button at the right time. However, despite all of these concerns, Breakpoint does improve dramatically the more you play it. Dogged determination to do well eventually overcomes the lack of instinctual controls and when you reach this point, Breakpoint becomes all right. The thing is, if someone showed me Breakpoint and Super Tennis on the Super NES, I know which one I'd want to play - and unfortunately, it wouldn't be the brand spanking new Saturn title - playability really does rule.

RICH LEADBETTER

The best tennis game available at Saturn at this time. Not monumentally playable, but Breakpoint does the job pretty well. Better controls and more pace would have made this a classic.

KRAZY IVAN

Big robot plus big gun equals big success, according to Psygnosis. But maybe not, necessarily. Right here is where we find out the truth behind this recently-constrived gaming adage.

BY	PSYGNOSIS
PRICE	£39.99
STYLE	SHOOTING
RELEASE	DECEMBER

Krazy Ivan tends to specialise in rather large, albeit busy explosions. As this picture so graphically demonstrates.

Being a Psygnosis product, you get a fairly polished front-end and some cool presentation.

Being the struth left/right button really does this game's challenge - a fault of the original...

It seems like it was only yesterday when the prospect of a leazy Pistolee with a 'Launch Missile Now' button under his thumb would have sent the native population of the western world running for their nearest municipal bunker with 30-year-worth of cling peaches, a tin opener and a gross of toilet rolls in these enlightened times, though, such characters can safely be made figures of fun, as indeed they have been in Krazy Ivan.

Rather than being a genocidal psychotic - who would have been so fun at all, let's face it - the star of this 3-D shoot-em-up is more of an eye rolling Rookie buffalo with a gen cross spirit and a huge robot death machine, which positively bristles with guns and ammo. From within the cabin of his ten-storey destruct-o-bot our hero is out to even the score in five of the world's trouble spots, where implacable enemy forces have overcome local defences and kidnapped the citizens, possibly for some lead of desant experiments.

Launched into the battle zone, you barely have time to work out the tricky controls before you're set

upon by low grade rocket trolleys and air-borne gashers that attack in pairs. These are small fry, though, a mere chin grazing annoyance that quickly yield to your twin cannons, spilling out hostages, weapon and shield recharges and power-ups for you to collect.

Ivan's rocket launcher and self targeting laser are even more devastating but ammunition is in short supply so these luxury weapons are best kept in reserve to deal with the real missile targets.

The map at the bottom of the screen indicates where these objectives are to be found. After a short robo-march across the hilly landscape you come across mighty mecha bosses, modelled after some Earth creatures such as a squid, gorilla or jellyfish. Or robot. Slomping into their patrol area wakes them up and they immediately attack with their own

special brand of rockets and death rays. These behaviours shouldn't cause too many problems in the early stages, though, because the simple tactic of repeated fly-into-step, turning and firing seems to flummox their low-grade battle computers and you can often fool them into shooting at where you were rather than

Does this PlayStation port-over make up for the extremely poor Destruction Derby?

Things get a bit more colourful later on in the game, as you can see.

... Which unfortunately wasn't correct for the Saturn version.

A robot gets it in the face.

Look-out! Here the robot wand.

One of Krazy Ivan's more impressive entailed enemies.

This would be a trap then.

Some kind of blueprint thing.

It's got the graphics and the speed to match the PlayStation original - but does Krazy Ivan match the excellent Gun Griffon?

where you are. As of level three, though you need to come up with something more cunning, as the bad guys tend to do nasty things like dive underground and spring up elsewhere, and they're often accompanied by some of their raw-drone mates that take distracting pot-shots at you.

Once you've passed these challenges the primary mission objective is revealed, a central installation surrounded by a spinning shield. To finish the level you have to dodge all sorts of rocketry for long enough to blast through the shield and destroy the glowing orb within. The same dodge-and-fire tactics work here as elsewhere and, for the most part, these final confrontations aren't terribly challenging, knowing you can be bothered to go through the motions of repeatedly side-stepping, twinning and firing.

Extensive research reveals that this slight gameplay flaw dogged the PlayStation edition of Krazy Ivan, released by Progress last year. I didn't find it to be too much of a problem with the Saturn game, though if you do use this tech major it does reduce the early part of the game to a series of saucy confrontations. By the time you get on to the later levels, though, the odds do start to get

overwhelming and there's too much weapon swap-ping, weapon aiming and mad evasive manoeuvring to let you get away with such foppish play.

The visual experience of playing Krazy Ivan isn't bad, though there isn't a lot of variety between stages, except mesas and valleys in varying earth tones and five shades of hell for the sky. Hills tend to pop into view shortly after whatever is standing on them, so you occasionally get floating robots appearing on the horizon, but the animation on the robots themselves is pretty good.

For all its fancy graphics and add-on weapons, though, Krazy Ivan isn't much more than a sauced-up version of that arcade title, *Battacore*. There's a little bit more to the gameplay but not enough to lift it above being a fairly simplistic blast. If the visuals had been a bit more exciting or there had been more variety in the scenarios, the programmers could probably have covered up this flaw and it wouldn't have been such an issue. But what was very nearly a full-on robo death-blast with napalm, blood and sweat comes across as being fizzed but not terrific fun if you're anything like me: after two-and-a-half levels you'll be (a) slightly fed up with it and (b) realising you've still got half the game to go through before you can comfortably allow yourself to buy something else.

PAUL SLARCEY

THE KRAZY GANG

Notable among Krazy Ivan's delights is its laazy intro sequence in which we are introduced to Ivan and his laazy grand crew as they are driving their robot launching truck through the Siberian tundra. Ivan, who has been stuck in his robo-cockpit for seven frakin' hours, lives up to his name and suddenly decides he's had enough sitting around and unexpectedly initiates the launch sequence. His little helpers just manage to get the launcher into position before he blows them all to kingdom come, then off he streaks, almost smashing the wings off two patrolling MIGs before he lands with a thud and stomps off to kick some 'batsik'.

Thrilling!

Fast and furious (eventually), but gameplay that is slightly too simplistic prevents this from being the definitive robo-blast you might have hoped for.

TUNNEL B1

So... Descent meets Doom meets WipeOut eh? That's what we'd been told to expect with the now legendary Tunnel B1. Well it isn't that, but it's still not bad...

BY	OCEAN
PRICE	£79.95
STYLE	SHOOTING
RELEASE	DECEMBER

Get the blast door (how it) and collect all the power-ups!

Design explodes into their component parts. Nice.

SPECIAL EFFECTS WIZARD

If *Tunnel B1* is going to win any awards, it's going to be for its graphics, which - and let's face facts - are very lovely indeed. So what kind of visual effects can you look forward to eh? Well, look at these pictures.

Surrounding the tunnel there are lots of lights - lamp posts and rail-lights - each of which is a lightsource, with beams of light trailing forth. As you turn, the stars of light change direction accordingly.

What isn't so great are the explosions. Given our great pixelated and textured puff materials with every configuration. Compared with the other results, the explosions are pretty poor.

The basic ambient lighting throughout the stages is most impressive. If there's an explosion around the corner for example, the entire wall lit up with the blast. It's stuff like this that impresses the most.

Shooting alongside your first target as level one looks great eh?

Some of the explosions are not - ahem, like this, look pretty damn nice.

Tunnel B1 on the PlayStation. Many were the arguments I've witnessed about this particular product. Some people loved it, others thought it extremely dull. And yet as far I care, despite the controversy (and some very negative second comments) it only managed one dull score in the whole games magazine industry.

Well, I'm not going to indulge in any Tunnel rant (yet today, because I was actually quite impressed with this new Doom game. The big question on everyone's mind is how does it compare to the PlayStation version? The original Saturn version used just about every technical trick in the PlayStation's repertoire and it's well known that the Saturn does find it difficult to cope with the transparencies and suckle that were used with gory abandon in the first version.

Well, the good news is that the Saturn version still looks pretty cool. The detail is pretty much on a par with the PlayStation version but more importantly the speed and fluidity are right on identical. The lighting has been toned down slightly, but it's still mighty

impressive. Unfortunately, the transparencies are replaced with the usual grid meshwork, but it's still pretty cool. What isn't so great are the explosions. Again, no transparencies so it's a joy to Orange Puff Central.

The graphics are the main pulling point, because in actual fact the gameplay is very pedestrian. Skim along the tunnels blowing things up and dodge enemy fire. Locate various power-ups and objects and find the exit (sometimes to a time limit). It would be better if all of this was a bit more exciting. The enemies seem to move in slow motion (and your firing rate is also slow, so that makes things even) and response to your controls is also a tad on the slow side. The lack of variety continues on to later levels although the tunnel levels are nice and there is some decent variation in the backgrounds. Enemies are great too when you first get a good look at the enemy helicopter gunships you're going to be impressed - even more so when you shoot one down and watch it spiral towards the ground where it explodes again. It's this that makes you keep playing the game.

Hats off to Neon for a very close conversion - graphically, *Tunnel B1* is bordering on the superb.

Steal the laser cannon!

Find the futuristic dust cart!

Hoovering orange puff!

Kill All futuristic ISAs!

Blowing the boxes reveals some hidden power-ups. Get 'em quickly before they turn radioactive and heat you.

Some of the more wacky rather like the soundtrack from "The Spy Who Loved Me"

Reaping the rewards of a weapons power-up.

Quit... that's gotta hurt.

Reaping rewards: Gosh!

The final levels are cool.

The generic generator is one of your targets or less! You. Shutting it down is a priority!

It's clear that coders Nean are doing things with the hardware that is well ahead of other games in the genre and you're dying to see what comes next. Compare the (usually) slow, jerky mouse looking Doom on Saturn to this and Nean's technical mastery becomes obvious.

But the bottom line is, you can't help but think that far, far more could have been done with a game engine of this caliber. Of course, this is being promised for the forthcoming Viper (also from Nean and using the same technology), but there's no reason why Nean couldn't have just spent off Decent, which would have been much more preferable to what this offers.

But judging this game on its own merits, I have to admit that I enjoyed it far more than I thought I would based on previous experience with the early PlayStation version. It's extremely challenging (and frustrating at times) but still pretty rewarding. Was there is an extra level and enemies exclusive to the Saturn version, which is a great bonus that goes some way to making up for the visual compromises.

RICH LEADBETTER

CONTROL-A-THON

Tanzel II has a huge array of buttons and vehicle to master and it does take a while to get to grips with the control method. The default controls really have to be changed. The game starts with forward as button A and backwards as down on the joystick! We recommend swapping around the accelerators and weapons lock-on buttons and the game becomes much, much more playable as a result. It's just really odd that the controls are like that in the first place.

CONTROLLER

EXIT

A pretty decent game for Saturn with some spectacular graphics. Not the class it should have been, but pretty solid (if a tad wacky) entertainment.

MADDEN '97

Finally, the Megadrive grid-iron guru makes an appearance on the Saturn. Oh, John Madden, you cuddly giant of American Football, where have you been all our lives? Was it the cake shop, perhaps?

BY	EA SPORTS
PRICE	£79.95
STYLE	SPORTS
RELEASE	DECEMBER

Heeeeere's Johnny!

John Madden's logo-that-isn't-his-name personality comes across expertly in the block-busting rendered intro to Madden '97. It starts off with a shot of his bejewelled ring - a Superbowl ring, no less - which spins and sparkles, then fades into a Superbowl XXXI logo on a billboard poster. The camera pulls back and heads off down a city street before flying in through the roof of a raucous sports stadium to catch the kick-off of a football game. The hardware glideman action is interspersed with the Madden logo, then the big guy himself appears, juggling a football that buzzes into frames and flies out of the screen at you! Heads up, sports fans!

Unlike some other sports games that have a little different ring some rings, most of them useless, Madden '97's varying visual media are all completely useful and add to that 'just-like-being-there' feeling. In the shot above we see the diagonal view, while on the right are the 'Classic Madden' views.

If there's one heavy-set fellow who knows his American Football, you can bet your goddamned liver on it's John Madden. A living legend to Megadrive owners, his games converted many a Tannoy English soccer lover into a Yankee Doodle Dandy gridiron guy, with their cool three-dimensional graphics and vast range of plays. For some reason, Saturn owners have been denied the Madden Experience and have had to make do with Acclaim's slightly lily Quarterback Club - but not any more!

EA Sports has finally got around to knocking up a Saturn version of JM's latest incarnation, which features all the frills and enhancements, the swooping camera angles and the vast array of options, that have become the hallmark of EA's recent PlayStation and PC titles, as well as the full breadth of gameplay that made the original Megadrive games such classics. Well, the first two at least.

But perhaps you aren't familiar with the basic

rules of this strange imported sport, huh? Perhaps you don't realise that the object of the game is to collect the ball and place it in your opponent's 'End Zone' at the far end of the field. It is entirely possible that you are well aware that you get four attempts, or 'downs', within which you must move the ball ten yards closer to your opponent's end of the field by use of running or passing plays. And there would be no shame in admitting your ignorance of the fact that failure to make that ten yard gain within the allotted downs results in 'a turnover', where the other team gains possession. The chances are, though, that if you've read this far in a review of an American Football game, you know this stuff already so I won't tell you.

These are the merest basics of American Football, though. Over the decades playing it has been refined into a science, with a level of strategic subtlety beyond that of any other sport. EA Sports have pulled out all the stops to ensure that Madden '97 does not stink

Touchdown! I'm so gross! Oh, wait a minute. I appear to be the threat of a touchdown. Come

back of that! I can't even win the 'Block' line. What hope do I have for victory in the Superbowl?

Watch and learn, true believers, as I demonstrate the perfect offensive play.

There's the snap! Now the quarterback just has to quickly pass it to "Player G".

It receives the ball and can now try to up the field, covering yard after yard.

Of course, this leads to strictly the reserves of team-sacking linebackers. Not true Maddenists.

The only way to really play Madden is against other people, and in that respect Madden '97 seems flawless.

on these subtleties is any way, and that it recreates the full grid-iron experience.

For a start-off, the game features over 100 NFL teams of the past and present, as well as some secret teams, featuring real-life players in their real-life positions with their real-life abilities, and even their real-life facts appearing on the screen. You can pit them against each other in a full NFL season's worth of games, in play-offs, a Superbowl or a Pro Bowl tournament, playing in digitally modelled versions of all 30 NFL stadiums. And the whole thing links extra-realistic because all of the player sprites are built from plain motion captured from actual players, and you can watch the action from any one of eight 3D viewpoints. Plus, there's in-game commentary and post-quarter analysis from Madden himself, along with the sort of statistical overload that American Football is famous for. (But is met by supreme inaffection by us lot.)

Aside from the obsessive attention to detail, though, the great thing about the Madden Magazine games was the perfect blend of play-calling strategy

and visible-fingered arcade action. This too has been perfected and carried across to the Saturn game. At each down, you can instruct your players to re-enact one of 500 different defensive and offensive plays designed by the Big M himself.

Once you've set them in motion you get incredible control over your players. By a passing play and you'll find the quarterback can now send the ball out to any of five teams mates. All this sets Madden '97 up to be the most complete American Football game yet, but there is a fly in the omelette. When you're on the offense against a computer team you can beat them every time with one play: the Double Flag. A bit disappointing, that, as it can provide an easy way out if you find yourself in dire score straits with the timer ticking down.

Having said that, the only way to really play Madden is, and always has been, against other people, and in that respect Madden '97 seems flawless.

PAUL GLANCEY

So easy control! (P. Good)

These revealing stats is full.

The pre-game fly-by shows off the vastness of the stadiums.

Hey, ANY extra point is good, but this one was EXTRA good. You yammer yammer!

What a shrewd fear! Think a that's white board on the end you'd have seen!

Defeat, the players are hidden in a world devoid of colour, where they exist only in blips of light and dark.

More action from the 10th, 10th.

If only it'd learned to be shorter.

Only 10th game, however how the extra point!

"It's good!" All we can do is game slack-jawed at Madden '97 and wonder if gridiron games can get any better than this.

JEWELS OF THE ORACLE

Who is the Oracle? And what's the big deal with his jewels? It's a baffling mystery that only you - YES, YOU! - can solve! No, there's no getting out of it, so just sit down, shut up and get on with it.

DEVELOPER	SUNSOFT
PRICE	£39.99
STYLE	PUZZLE
RELEASE DATE	DECEMBER

The green-lit path shows you the way through the maze corridors, towards the mystical pool that serves as the central hub of your quest. Press one of the stones around the pool to open the route to Stone Statful Dooz-Beezers that hide untold riches.

TRAFFIC LIGHTS OF THE ANCIENTS

Here's one of the few conundrums in *Jewels of the Oracle* that is actually solvable by members of the genus *homo sapiens*, as opposed to the super-evolutionary beings who appear on 13 To 2. The clue - "Be as persistent as the tiny creatures beneath your feet" - clearly gives it away as a sliding block puzzle, in which you must rearrange jumbled tiles which bear the images of four colored circles. Though the number of tiles and the shape of the frame makes it look complicated, it's actually easier than most other such puzzles, simply because there are few empty spaces which give you plenty of room to manoeuvre.

Be as persistent as the tiny creatures beneath your feet.

Fed up with your current quality of residence? Perhaps you don't care for the weather? Or the lack of quality television programmes? Or the fact that you can't find a decent 24-hour upholsterer due to a ridiculous and outdated law made in the late 1900s?

Perhaps, then, you might have found happiness in the land of Nisus, an ancient realm in the Middle East, where everything was nice. The problem with nice places, though, is that everyone ends up wanting to go there. They end up getting overcrowded, the drains get clogged up and the whole place turns into a disgusting pit of human excrement.

In their wisdom, the rulers of Nisus foresaw this inevitable end to save their land from repellent fumes they set up a rigorous vetting procedure for new citizens. To enter Nisus, prospective immigrants would have to complete 24 mindbending puzzles, the like of which would never be found anywhere else on this planet, not even in the most expensive of Christmas crackers. This did only the most enlightened humans gain admittance to Nisus, and for many years the land thrived as the ancient world's number one summer resort for tedious brassica.

The citizens of Nisus would, no doubt, have gone on to found a shining world empire founded on peace, intellect and unwavering, but fate took a different course. A devastating earthquake buried their land, leaving no trace of them or their civilisation - until now. Archaeologists have unexpectedly unearthed the Gate Gates which stood at the entrance to Nisus. The incredible treasures of a lost world beckon, but the gates stubbornly refuse to open until someone completes these hellfire 24 puzzles. As everyone else seems to have succumbed to some ancient curse that forces them to spend half the day squatting over a hole in the sand clutching a toilet roll, you figure, what the hell, I'll have a go. So you do. And so it begins.

Press START on your controller and you enter a pre-rendered world depicted in letter box full motion video and controlled by a small, free-effect cursor. The tip of the cursor glows green when it passes over an object or possible exit, and when you make a selection a short animation takes you to the next part of the game.

Once the quest has begun you find yourself inside the buried gateway to Nisus and your only

To enter Nisus prospective immigrants would have to complete 24 mindbending puzzles...

This Enigma reveals the Assembly of the Planners.

Once again, the clue is in the mysterious language of the Oracle. It is 0? What will the "Assembly of the Planners" business? What's wrong with "44 the steps to the lake and keep the others separate"? Less atmospheric, I suppose.

Men Arrage tells us Lavalanche: Men.

The most tedious puzzle of all in this Sudo-Bur-ple game, starting a slow-moving beetle.

Shelved objects of the gods? Here you gaze upon the *Beast of Odrin*? Or the *Plow-Sign of Bal's Hall*, tough, because like it's just a tree with a puzzle in it.

Devolve the darkest side of confusion and night.

Good advice from the Oracle. There's a lesson for us all there.

The crazy orboid music table wrap - is actually super-bard.

Dividers of Doom. Measure your way across the board.

If the tasks were easy the whole game would be worthless - but you can take complexity too far.

route leads you to a stone altar on which stands a goblet containing coloured gems. Touch the goblet and the gems begin to swirl; then they disappear in a blaze of light. A lugubrious voice emanates from then an telling you, in a roundabout way that you have to recover the gems by solving the puzzles of the Oracle. Therein will you be allowed access to the lost treasures of Nifas.

Stepping outside, you come across a mysterious pool of water surrounded by stones. Press a stone and a symbol depicting some kind of puzzle eerily appears in the pool. If you then step into the pool you're transported to a room containing one of the 44 challenges.

Most of the puzzles are variations on familiar themes, varying from tile-swapping to maze solving to *Soko* Bar-style blockshoving, all of which have been done out in an Ancient Middle Eastern motif. Familiar though they are, they present a formidable challenge. The maze puzzle, for example, requires you to guide a snake through a vast maze that covers all six faces of a cube. A tile spinning game in which you have to align horse pictograms suddenly becomes a new form of IQ test torture when you realise that the tiles can be shuffled on their grid around as well as rotated.

At least you have some initial tidbit of what to

do with these examples though. Others are made even more testing by their obscurity. In one room you're confronted by a table bearing a dozen objects and it transpires that you have to pair them up according to some convoluted factor. Fortunately I had the benefit of a solution sheet to reveal the tenuous links between the objects (as well as a large dictionary to reveal what a 'quest' is), but regular punters will have to make do with the cryptic Oracle's tip that appears when they click on the triangular stone at the top of the screen.

Of course, if the tasks were easy the whole game would be worthless - but you can take complexity too far. While the puzzles are perfectly suited to Tolkien-headed genius rocket scientists, I suspect they may be a tad too tricky for Saturn owners who have the standard model brain installed.

In an attempt to make jewels of the Oracle more popular, the programmers have included an easy mode which simplifies some of the puzzles. But I can't see that making a great deal of difference. It's still a game that needs the thought patterns and huge attention span of a major league puzzle master. Lesser humanlings need not apply.

PAUL CLANCY

The table involved in the *Beast of Odrin* puzzle. Here are you.

Big trouble, for you have misaligned one of the Oracle's puzzles.

Clued.

Find the links between the objects. Which one fits the 'quest'.

An intriguing match. With an equally intriguing puzzle environment. Fascinating, No, extremely curious in fact.

Are in that they told you that ODR is Peltis Arranging would never come in useful. How wrong they all were.

Another challenge in the arcane sport of Ball-Arranging. It's rather like *Ice Crystal Maze*, this, isn't it? Kind of.

Take the Oracle's chamber (best, break the bowl of jolly booze (middle) and take a trip through the forest of wonders (bottom).

A testing puzzle game which will thrill MENSA candidates, but bore/annoy the pants of everyone else.

SEGA SATURN™ tips

To celebrate the official release of *Street Fighter Alpha 2* - the greatest 2D fighting game ever - SSM brings you a massive list of cheats and secrets for it. On top of that, we've got the first cheats for two of Sega's Christmas biggies: *Daytona USA* and *Virtual On*. We think you'll find them most amusing, boyfrieeeeeeend...

STREET FIGHTER ALPHA 2

Select Training Mode and on the Character Select screen hold L Shift and Start. Now choose a character and keep the buttons held until you reach the options menu. When you start the game and initiate a Custom Combo, the shadows behind will never disappear! You'll also be able to jump and won't always be rushing forward. This lets you practice Custom Combos for as long as you want!

Do the same as the previous cheat, only hold R Shift and Start when selecting a character and you'll have rapid fire attacks when you begin. This means you can hold a punch and repeatedly do fireball motions to throw lots of projectiles across the screen.

If you do both cheats at once by holding L Shift & R Shift and Start when selecting a character, you'll have rapid fire attacks and ever lasting Custom Combos at once! By doing this, you can get someone in the corner and hold an attack button to keep juggling them for over 99 hits!

These secret character cheats can only be entered in Arcade, Training or Survival modes - not Versus!

To access Chun Li in her original *Street Fighter 2* costume, highlight regular Chun Li and hold Start. Now wait for 3 seconds, and pick her by pressing any button. The only other difference is that her fireball now has to be done as a charging motion, not rather than a half circle forward.

To play as Evil Ryu, get to the Character Select screen and highlight regular Ryu. Now hold the Start button and move Right to Adon, then Up to Akuma, Down to Adon again, then Left back to Ryu. Now select him while still holding Start. Evil Ryu can do a Super Dragon Punch (double fireball motion and any lock) and Akuma's "Firecracker" move (L, L, P, P, L, H, H, any quick). He is also much better at juggling and linking attacks!

To access the original *Street Fighter 2* version of Zangief

highlight regular Zangief and hold Start. Now move to Sagat, Sedoin Blaise, Charlie, Dhalsim, Ryu, Adon, Guy, Ken, then Zangief again. Now select him while still holding Start. Original Zangief doesn't have a super bar and can only perform the two original special moves - the Spinning Reddwarf and the Spinning Latent. His rings are much better than the regular version.

To access the original *Street Fighter 2* version of Dhalsim, highlight regular Dhalsim and hold Start. Now move to Zangief, Sagat, Charlie, then Dhalsim again. Now select him. While still holding Start, Original Dhalsim won't get a super bar and can only do a Yoga Flame, Yoga Fire and Yoga Spear.

To play as Super Akuma (also known as Shin Gouki), highlight regular Akuma. Now hold Start and press Down, Right, Down, Right, Down, Down, Down, Down, Left, Down, Left, Down, then select him with any button. Super Akuma can throw double air fireballs, has extra fast teleports and "Firecracker", and is by far the best character available. We recommend you don't play as him too much, as he makes the game too easy.

All of these characters can be played in Versus mode by entering them in one of the other modes then playing Versus. On the Vs Character Select screen, highlight someone and hold Start to make their name change colour. Now choose them to get the new version.

For 6 new Sakura colours in Survival Mode, only highlight regular Sakura, hold Start and press Up, Left, Down, Left, Down, Right, Right, Down, Left, Left, Down, Down, Down, Right, Up, Up, Right. You'll be on Ryu. Select him with any button while still holding Start. For one of 6 new colours for player 2, you must do the same as with player 1, but press Up, Left, Down, Left, Down, Right, Down, Left, Left, Up, Right, Right, Up, Left, Up, Right, Right instead.

Her's Chun Li is her original costume!

Secret Evil Ryu's time-level "Firecracker"

Original Blazie's got an super mode bar.

Original Zangief has a massive model!

Sakura's lovely new girl school colors.

The secret colors are only for Survival.

That new brown outfit's not very nice.

Super Akuma's death air fireball!

DAYTONA CCE

Thanks very much to Clifford Rooney from Oxford for sending these secrets in first.

To get a hidden mirror mode you must first finish all of the tracks on Hard difficulty. Then go to the track selection screen and hold X+Y+Z and press A or C to flip the track. When you race now the everything will be reversed so that all right hand bends have become left hand bends etc.

To get the original Daytona Hornet car finish all of the tracks on Medium difficulty in first place. The new car is brilliant in every way.

To get the first horse (called Uma) you must come in first place on the first two tracks on Hard difficulty in an Endurance Mode race. The horse loses no speed at all on the grass.

To get the second horse (called Uma 2, family enough) you must come in first place on all tracks playing as the first horse (Uma). All of the options should be on their default settings for this.

Here's Mirror Mode working to full effect...

... And here also on the expert level too.

VIRTUAL ON

While playing Virtual On you can get different camera angles by pressing X+Y+Z at the career time. The view will instantly switch to an overhead view. Then to a side view when pressed again. Press them together since more to get back to the original behind the character view.

To get all of the characters in their alternate costumes, go to the mode select screen and select whatever you want to play by pressing and holding the L Shift button. Now everyone will be in their second colours to be picked.

An extra white version of Tempan and Radeen can be accessed by going to the title screen and holding Up then pressing L Shift and R Shift at the same time. You'll hear a noise to let you know it's worked, and both characters will be in new costumes.

To play as the penalty boss Jaggard, finish the game as any character on Hard level and you'll then be able to play as him in Arcade and Venus modes by moving to the right of Radeen on the Character Select screen.

An easier way of playing as Jaggard is to go to the title screen and hold Down. Then press both L Shift and R Shift at the same time. You'll hear a noise if it has worked, and he'll be selectable by moving off to the right of Radeen on the Character Select Screen.

If you're not late on pink, play to feel-the-the blue.

Jaggard grows from the floor when you pick him!

Jaggard has got awesome weapons!

By pressing X+Y+Z at the same time, you can switch the view to this.

Pressing X+Y+Z again changes it to a side-on angle. It's a bit tricky...

Use the cheats here to get Radeen in this hidden yellow-white outfit.

ALIEN TRIOLOGY

These excellent cheat modes are accessed by entering these codes as passwords on the standard password entry screen. As you'll notice, some of the letters are replaced with numbers to make up for the fact that the password screen doesn't have the entire alphabet. Once you've entered a code, a message will appear to let you know that the cheat has worked.

For a level select, enter the code "FOToY" but replace the "Y" with the level number that you want to warp to. Exit the password screen and begin a new game.

To make yourself invincible, enter the code "VNI0IC950M". Now start the game and you'll take no damage.

To get all of the weapons from the start of the game, enter the code "FISHINGFORGUNS". As you can guess, you'll start with all the weapons.

To give yourself maximum ammunition, enter the code "VALMROCKETS". Again, it's pretty obvious what that will give you.

"Cheats unlocked" shows you did it right.

Getting hit does no damage when cheating!

WORLD SERIES BASEBALL 2

Just a tiny little tip you may not have noticed. When playing in Hennessey Derby mode, you can get different camera angles simply by pressing the R Shift button whenever the ball is in the air. That's it.

COIN-OPERATED

This year once again saw the greatest in arcade shows, with the 34th Amusement Machine Show (JAMMA). At the Makuhari Messe, outside Tokyo, the world's gaming elite gathered to display their latest coin-ops to the world.

If what you've been used to seems like the limit of gaming achievement, prepare to be blasted away by the real power of the arcade. Every major arcade manufacturer has embarked on a battle for arcade supremacy by secretly developing its own state-of-the-art high-technology hardware. The full force of JAMMA '94 is the like of which you have never seen before! With power to torch all home systems to ash, these games aren't likely for conversion any time soon. So stand by for action as the video-game systems of the future battle for the accolade of Ultimate Next Generation Game! Let's look at the competition:

SEGA
Hardware: Model 3
Games: Virtua Fighter 3, Superstar
Still the best game sound in the form of V93. The final version in all its magnificence was certainly the focal point of the show - a clear demonstration of the future of arcade gaming.

KONAMI
Hardware: Cobra
Games: GTI Club, FF933 Project
As well as the brilliant GTI Club, Konami had a new demo version of a 3D fighting game, with graphical power at least equal to Sega's Model 3 board.

CAPCOM
Hardware: CP-SYSTEM 3
Games: Red Earth, Street Fighter 3
Proving sprite technology can advance just as much as 3D polygons. Capcom finally showed the future of fighting games with the amazing Red Earth.

TAITO
Hardware: TOP-SECRET
Games: G-Darius
Taito were also showing a demo of their first game to unleash the power of their new board. The next in the series of the incredible Darius series is now in 3D!

SNK
Hardware: TOP-SECRET
Games: TOP-SECRET
Imagine how some of SNK's best fighting games of all time would look if they had even more power to run them! Well SNK's new board is coming soon!

NAMCO
Hardware: TOP-SECRET
Games: Tekken 3
To everyone's surprise Tekken 3 wasn't unveiled at the show as we can't reveal much but we'll all be getting that Tekken 3 will be the first game on it! This is rumored to be Namco's equivalent to the Model 3 board.

CAPCOM

RED EARTH

JAMMA proved to be the first real opportunity to savour a near complete version of Red Earth - the Western version of Wai Zed which we featured in issue #799. Significant because it is Capcom's first title powered by the new CP-System III tech-

nology, we now have a better idea of the plot details, and all important play mechanics. This game is still unfinished, so there may still be changes. However it is shaping up to be MONSTER exciting! A full report coming soon, but suffice to say that this game has the power and the concept to re-define sprite-based fighting games!

X-MEN VS STREET-FIGHTER

You only have to look at the name to know this game offers more action than you ever thought possible! Bouting superlatives game play and graphics that must be pushing CP-System II to the limit. X-Men vs Street Fighter became one of the most popular games of the show - you really had to wait a long time to get a game. Most people agreed that CAPCOM had got the balance right between the mutant X-Men and the more human Street Fighters. Graphically, everyone was stunned that they'd been able to squeeze a game as great as this out of the CP-System II.

STREET FIGHTER EX

Also on display at Capcom's stand was the much anticipated 3D polygon variation on the Street Fighter theme. This game is being developed by a team called Anka, whose interview we printed in the last issue. First impressions were slightly unsure because graphically it's still quite basic compared to other 3D games available. However, all those who played it agreed that the gameplay was something quite special and indeed seeing your favourite 2D Street Fighter classic characters fighting in 3D is an amazing experience!

The control method remains faithful to the SF series - eight direction joystick plus six buttons. As you can see from the pictures, all the popular moves have been retained and - from what we can tell - are performed exactly the same as before. There are, however, some intriguing

original features. Bear in mind that members of the Anka team created Street Fighter 3. So what's okay with them is fine with us! While no details are available on the kind of hardware being used to support the game, the results are nonetheless spectacular. It is genuinely exciting to see Street Fighter favourites Ryu, Ken, Chun-Li and Zangief presented in this new way. Since the last issue we can confirm that two new characters have entered the mix - one of them is Guile making his long-awaited return to SF. The other is an all-new character.

SEGA ENTERPRISES

VIRTUA FIGHTER 3

Although there were obviously several long rows of these units set up at the Sega area they also had the units scattered around the entire hall so as you walked around you just kept bumping in 'em! There were long crowds around the main projector showing the opening movie.

SEGA TOURING CAR CHAMPIONSHIP

Choose your favourite car from the first full production car available and race them on original circuits with "new dynamic realism!" The new specially arranged BGM music "Dead Heat" was composed by ALEX TRAX (one of the coolest dance music labels in Japan at the moment) with a variety of other characteristic club musicians. All the engine sounds are faithfully reproduced with state-of-the-art sampling from real cars.

SUPER GIANT SLALOM

This game from Sega came as a complete surprise and everybody was amazed at how good Sega's first attempt was. Obviously competing with Namco's Alpine Racer there are many similarities however until we have further details the jury will have to wait.

WAVE RUNNER

Working with Yamaha, Sega have developed a super realistic jet ski game. They wanted to get it perfect so they chose the standard riding version (as opposed to Namco's standing version). Due to their close cooperation with Yamaha the feedback of wave bounce and landing in the water after going over a bump is really powerful. You really feel like you're on the ocean.

KONAMI

GTI CLUB

Konami's new racing game is set in a beautiful resort area located in the South of France. Eight rally cars compete in each race with up to four of them controllable by the players, with the others driven by the CPU. There are several unique game features: Side Brak Quick Turn - a technical rally term referring to a manoeuvre used with these small FF (Front Engine Front Drive) sports cars. The use of which gives GTI Club a new kind of driving feel. A "Tone Course Map" refers to where, at each and every city street cross-

There were always massive crowds around this game. One thing not playing could enjoy the game as it's so open and free that the players always seem to take totally unexpected routes. Certainly, the big bit of the show!

roads, you can freely choose any course across them. Winding between the other vehicles, cutting across the traffic (one purpose was you cutting up a huge bus), you can even go the wrong way down the road! Usually you have total free-dial GTI Club appears to have redefined the car racing game for years to come!

SOLAR ASSAULT GRADIUS

For all of Konami's fans who've been dreaming about the latest version of the Gradius Series the wait is over. We're unable to go into great detail at the moment but in general the game is a behind view 3D shooting game. The scale is big with huge 3D objects being moved around the screen. There's a power-up gauge and collectible capsules to power it up. Along with the ever popular "Vic Viper" (armed with missile and laser) is the equally famous "Gad Gettich" (armed with spread bomb and cyclone laser).

TAITO

PUZZLE BOBBLE 3

Puzzle Bobble is back! Choose from eight unique characters and battle against a fiend or the computer over a massive range of bubble layout variations (a stages/yo rounds!) There are several exciting and fantastic new features. New technique: Deflect from the ceiling as well as the sides! New item: the Rainbow Bubble - burst a bubble next to the Rainbow Bubble and it changes to the color of the burst bubble. New Feature: Pease Mole, whose some kind of bubble puzzle slowly advances down the screen, brilliant!

FIGHTERS' IMPACT

The game play in Fighter's Impact is pretty straightforward. There's one lever and three buttons - Shift, Punch and Kick - but Taito added a whole range of special moves to make it rather unique. Latest motion capture technology for added realism. All eight characters have three choices of fighting style (except Yukio who has only one). Build your own original combo, where certain attacks in the right sequence creates

an amazing control 4. The Shift button allows for a number of special evasive manoeuvres with the lever. Worth investigating.

SIDE BY SIDE

A race game in which TAITO go for realism - not just in handling, but looks as well. All eight cars as SIDE BY SIDE are based on marketed cars, two cars from each of four manufacturers - Toyota, Nissan, Honda and Mazda. The performance of each car reflects that of the real car so some are quicker than others depending on the course you choose. Each course represents one of the four seasons: SPRING - a high speed course suitable for beginners, in which cherry blossoms lining the road. SUMMER - a slightly more challenging course perfect for intermediate drivers, set next to the seashore. AUTUMN - you'll need to be a more professional skilful to handle the narrow roads and a series of tricky corners which characterise this leafy forest. WINTER - for super-experts, requiring a whole range of new driving skills in the snow. The four-player option is great fun too, adding to the enjoyment.

SNK

Proving once again that they have plenty of good ideas up their sleeves SNK had a number of attractions at their booth. The MFG000 is a simulator ride seating six people with a huge 70-inch screen - a great experience! SNK also had a curious game which involves you moving a metal bar around a course. All the edges to the course are electrified, so if you touch the side a buzzer rings, sparks fly and smoke billows out. Finally, SNK's new cabinet design now contains a video camera and TV screen! It's connected directly to your opponents cabinet so that you can see each other while you're playing! Great fun when you're with a friend because you'll pull stupid faces when you beat them! Also on show was their football game, Ultimate 11.

SAMURAI SHODOWN IV

Not much info on this yet as it's still under development. It's the next sequel to the hugely popular Samurai Shodown series. This time there are 12 characters from Samurai Shodown 3, another three characters from even older versions of Samurai Shodown, and two completely new characters making a total of 17 player characters! Both the effectiveness of the weapon and level setting are selectable so both beginners and experts can enjoy playing it.

TECMO

DEAD OR ALIVE

At the show it still wasn't quite finished as Tecmo were still in the final stages of fine tuning. However, at the Tecmo Game Lab show (see main news section) they unveiled the final version. Japanese dedicated Arcade magazine Gamest has been avidly following this fighting game for the past few months, so expect the final result to be awesome. Tecmo also unveiled their 3D horse-riding game, Gallop Racer.

**KIZUNA ENCOUNTER:
SUPER TAG BATTLE**

Sequel to last year's Kizuna Encounter, this time with an all new game system. One player can choose two characters (the tag system). On a normal MVS only one player can control at a time, but on the Special MVS version you can have 1P VS 2P and 2 players only have to put in one credit! Some of the other combinations are 2P VS 2P, 1P VS COM etc. The control system uses one lever and 4 buttons: Punch, Kick, Weapon, and Tag. Tagging is fairly simple. So long as you are in your tag area then when both characters touch they can tag to change places. Where there are two players in team the waiting character isn't left idle. While tapping on the button he can increase his health by restoring your life gauge. However, the more times you tag the effectiveness becomes less and less. There is also an emergency tag, operated by the waiting character if these conditions are met: 1. Your partner's bar is almost empty, 2. your opponent's bar is over half full, and 3. your partner is in your tag zone. Needless to say Super Tag Battle is packed full of special combat moves and techniques such as Stun, Guard Cancel and Rushing Combo elaters. Probably the best 'tag' game available at this time.

HUDSON

NEO BOMBERMAN

At last he's back in the arcade! There are two modes: in the Normal Mode everything you could imagine from the Saturn version is there, but the scale is much bigger with even more in-depth game play. There are ten types of vehicles which are spawned from defeated enemies. Also if you rescue your companions who are trapped in a cell, they can fight along side you. When all have been helped to safety you need! This time all the enemies have artificial intelligence to refine and improve their fighting strategies depending on your tactics and skill. This is done to make your life more difficult as their increasing smartness will be a source of great annoyance. In total there are 5 stages to be completed. All your favourite characters are here with their real look as straight from the Japanese TV commercial.

IAIACO

SECOND EARTH GRATIA

Proving that there's still life in this genre of olden days Iaiaco are fighting back with their latest offering, Second Earth Gratia! With awe-inspiring views and background design they've generated a brilliant 3D effect to the game. By utilizing the latest high quality 3D graphics technology they've tilted the typical horizontal scrolling genre so that it's got true depth and perspective! This makes playing the game a lot easier and much more fun - judging lengths, distances, and the size of objects is much more intuitive, so your shooting is much more precise. However, to make up for this, all the enemies are harder so it's still a challenging game.

OUT NOW

STREET FIGHTER ALPHA 2

BY CAPCOM, PRICE \$44.99, RATING 95%

Let there be no doubt about the genius gameplay that Capcom have installed in Street Fighter Alpha 2. Everything about this classic game screams quality. For a start, the renowned fighting game masters have actually managed to better the balance of the

original 2D with a far larger character roster and numerous gameplay enhancements designed to make this the ultimate combat title. The new Custom Combo and enhanced Alpha counter features add to the already brilliant Street Fighter Alpha engine. Truly this is the most technically accomplished and supremely playable fighting game out there.

The new characters are ace too. Dhalsim and Zangief finally arrive in the Alpha series, plus the Final Fight connection continues with the inclusion of Rolento. Have Street Fighter 1, we have the amazing Gen, and those after an all-new creation can revel in the wanton violence of schoolgirl Sabaki!

Plus, with better graphics, faster loading, more animation and loads more hidden characters, Street Fighter Alpha 2 on Saturn is far superior to the decent enough PlayStation version also available this month.

VIRTUA COP 2

BY SEGA/AM, PRICE \$49.99, RATING 95%

The incredible quality of Sega Saturn AM's title is becoming a bit of a cliché these days. As you might imagine, I've about to be buying

expensive on a superlative as I tell you why Virtua Cop 2 is worthy of praise.

For a start, it's a stunningly close conversion. It might not be quite as close as the original (which was a far less ambitious role-op) but when compared to Cop 1 it is packed with far more detail and headbuds' were sorely. The choice of route through the latter half of the first two levels has been retained, plus AMs have added in an alternative route on the final stage - something exclusive to Saturn, since it wasn't in the arcade original.

So, it would appear that this is something of a "hats off to AMs" moment for landing in what is undoubtedly an awesome game. AM owners can buy in confidence too. AMs have done so proud with a full-screen, full speed display making this just as good as the Japanese original. This only means out as the Game of the Month accolade due to the competitive spirit of EGA, yet still demands purchase!

DAYTONA CCE

BY MCA, PRICE \$49.99, RATING 90%

This game is still a subject of hot debate in the EGA offices. As we said last

month this is NOT Daytona 2ème. The CS Team (responsible for Sega Rally) have opted not to reconvert the car op as we suspect most people would have liked them to do. Instead they have produced their own spin on the incredible AMs classic.

In some ways, the game is a great success. Overall, the graphics do look far better with a full screen, full speed PA display.

STREET RACER

BY UNICO, PRICE \$49.99, RATING 87%

One of the greatest games of all-time is Super Mario Kart. There, I've said it. I don't care if I am editor of the official return magazine. No-one, but no-one can deny the power of Mario Kart. And since that classic is never going to appear on Saturn we should be thankful for any title which attempts to emulate it. Which is Street Racer, basically Taking elements of Street Fighter and mixing in copious amounts of Mario Kart

should result in a triumph of a genre. As it is, Street Racer isn't bad at all.

From a technical standpoint, it's excellent. It's the first polygonal 3D racer to run at arcade speeds (60 frames a second), and features 80000 PLAYER simultaneous play.

It's all pretty cool actually, with only a series of minor problems stopping this from getting a very high rating. Foremost amongst the quibbles is the fact that you seem to be controlling the road as opposed to the kart, which does put you off. In those types of game, it's playability that's all important and technical issues aside, game like Sega Rally and Daytona are still streets ahead still. If Vivid Image were to use this technology on a more realistic race, we could be in for something awesome.

HARDCORE 4x4

BY CEMIN, PRICE \$49.99, RATING 76%

The battle of the road racers is hotting up this Christmas. Indeed, three of them are featured in this Out Now section

alone. Unfortunately, Cemin's off road effort is probably the worst of the three.

There is little to fault the graphics as you can see from the shots. The continued landscapes and texture mapping are rather fine. It's just a shame that the frame rate is so poorly

apparent to Daytona CCE and especially Street Racer. This leads into the fundamental problem with the game. Speed. Now off loading isn't the most velocity packed racing sport granted. But it is kind of essential for a driving videogame and as such Hardcore 4x4 is just a bit lacking in the excitement department.

With a smoother frame rate, higher speed or more exciting terrain this could have been ace. As it is, Hardcore 4x4 falls distinctly into the "not bad, but certainly not essential" category.

CHAOS CONTROL

BY NIO/CAM, PRICE \$39.99, RATING 90%

The last couple of months have certainly seen an upsurge in the amount of software using the old Virtua Gun after months and months of Virtua Cop being the only compatible software. Chaos Control was the first "other" game to use it and it's not new. However, don't buy it. Please.

For a start, rather than using excellent 3D for the main visuals, Chaos Control uses full motion video with overlaid sprites. This gives the

game a distinct "could have been done on Mega-CD" quality and although the DMV is obviously better, the lack of interactivity is still apparent. As Bob so deftly put it when reviewing this game last month: "You might be desperate for

Introducing...

SUPERCAR

The power of Model 3 provides the most amazing arcade driving experience ever. Let there be no doubt about the power of Sega's new arcade technology. We can only assume that since AM2 for the masters built this new rig, the game will play just as good as it looks. If not more so. We'll have more details as soon as they're released.

AMI have finally revealed their second Model 3 project for the arcade... and it's the official coin-op sequel to the classic Daytona USA! Currently entitled "SuperCar" (although this might change), this amazing looking game looks like being the most stunning driving game ever seen anywhere!

As far as we can tell, the gameplay looks like being quite similar to the classic Daytona. The readouts and score panels are nigh on identical (just rendered in a superior fashion). However, it has been revealed that key members of the SuperCar development team have spent time racing the real life equivalents of the machines in the game, including Ferraris. Pfft! You can be guaranteed that the handling of the game will be just as clever and as realistic as Daytona USA and Virtus Racing were in their day.

Readers of the old SEGA MAGAZINE might find one or two aspects of SuperCar familiar. Before coding VPs for the Saturn, AM2 released a full-motion video demo showing Ricky racing through a coliseum that exploded into its component polygons as he raced through it. Well, both the vehicle and the coliseum have made it into SuperCar virtually unchanged. The demo

was produced over 18 months ago, which just goes to show how long AM2 have been planning this Daytona sequel!

There's little more we can add to what the screenshots show, mainly because AM2 have released very little in the way of detail. They want the pictures to speak for themselves before the press can get their clawing hands on the game proper. We think that the above mentioned pictures do the job quite well, yes?

You can rest assured that SEGA SATURN MAGAZINE is getting the bottom of all of this SuperCar business and you can expect a full report on the progress of this state of the art videogame in the near future - hopefully the next issue, if all goes well!

Model 3 creates the most phenomenal racing game ever devised - surpassing the incredible Daytona USA and Sega Rally Championship. If this is how far Daytona has progressed thanks to the new technology, you can only wonder for example just how good Virtus Cup 3 will be! AM2 and Model 3 rule the arcade!

Dear Newsletter,

In my view, SEGA SATURN MAGAZINE is the greatest monthly publication in the world and I want you - you YOU - to get it aside for me on a monthly basis, in case they're all stolen, or bought, or accidentally blown or something.
